MS #1207

Created in 1849, the Department of the Interior--
America's Department of Natural Resources--is concerned
with the management, conservation, and development of
the Nation's water, fish, wildlife, mineral, forest,
and park and recreational resources. It also has major
responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the
Department works to assure that nonrenewable resources
are developed and used wisely, that park and recrea-
tional resources are conserved for the future, and that
renewable resources make their full contribution to
the progress, prosperity, and security of the United
States--now and in the future.
