

**Supplementary Figure 3.** Estimated log-scale dolphinfish (*Coryphaena hippurus*) density (D) plots over space and time. The space over which log-scale densities were estimated represents the custom extrapolation grid described in the Methods. Log-scale density estimates are provided by both year and season, which is denoted with a decimal number after the year, e.g., “2012.2”; no decimal after the year indicates the winter season, “.2” indicates the spring season, “.5” indicates the summer season, and “.8” indicates the fall season.
