

Supplementary Figure 3. Relationship between fork length (cm) and the following organ measurements of male shortfin makos (*Isurus oxyrinchus*) caught from the Gulf of Mexico to Newfoundland, Canada, during 1971–2018: (A) testis length (in millimeters), (B) testis weight (in grams), and (C) siphon sac length (in millimeters). Black triangles and open circles indicate specimens in the immature and mature stages, respectively. The vertical dotted lines represent the lengths of the smallest mature and largest immature specimens.
