FISHERY STATISTICS
OF THE UNITED STATES
1950

BY
A. W. ANDERSON and C. E. PETERSON

UNITED STATES GOVERNMENT PRINTING OFFICE, WASHINGTON : 1953

Fishery Statistics of the United States and Alaska are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of manufactured products and byproducts, the employment of men, craft, and gear in the capture of fishery products; and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality and gear; and on the type of gear and boats operated. They assist conservation agencies in regulating the commercial fisheries so as to produce maximum yields without depletion.

Previous statistical reports on the fishery industries were issued under the Department of the Interior in the Administrative Report series for 1938 and in the Statistical Digest series for succeeding years. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

The following is a listing of the various Statistical Digests issued since 1939:

- No. 1 Fishery Statistics of the United States, 1939
- 2 Alaska Fishery and Fur Seal Industries, 1940
- 3 Propagation and Distribution of Food Fishes, Fiscal Year, 1941
- 4 Fishery Statistics of the United States, 1940
- 5 Alaska Fishery and Fur Seal Industries, 1941
- 6 Propagation and Distribution of Food Fishes, 1941
- 7 Fishery Statistics of the United States, 1941
- 8 Alaska Fishery and Fur Seal Industries, 1942
- 9 Propagation and Distribution of Food Fishes, 1942
- 10 Alaska Fishery and Fur Seal Industries, 1943
- 11 Fishery Statistics of the United States, 1942
- 12 Propagation and Distribution of Food Fishes, 1943
- 13 Alaska Fishery and Fur Seal Industries, 1944
- 14 Fishery Statistics of the United States, 1943
- 15 Alaska Fishery and Fur Seal Industries, 1945
- 16 Fishery Statistics of the United States, 1944
- 17 Alaska Fishery and Fur Seal Industries, 1946
- 18 Fishery Statistics of the United States, 1945
- 19 Fishery Statistics of the United States, 1946
- 20 Alaska Fishery and Fur Seal Industries, 1947
- 21 Fishery Statistics of the United States, 1947
- 22 Fishery Statistics of the United States, 1948
- 23 Alaska Fishery and Fur Seal Industries, 1948
- 24 Propagation and Distribution of Food Fishes, 1944-1948
- 25 Fishery Statistics of the United States, 1949
- 26 Alaska Fishery and Fur Seal Industries, 1949
- 27 Fishery Statistics of the United States, 1950

FISHERY STATISTICS OF THE UNITED STATES: 1950

INTRODUCTION

This report contains a review of the fishery statistics for the year 1950, collected by the Branch of Commercial Fisheries during 1951. These include data on the volume of the catch of fishery products and their value, employment in the fisheries, quantity of gear operated, the number of fishing craft employed in the capture of fishery products, and information on the volume and value of the production of manufactured fishery products and byproducts.

Statistical surveys for the 1950 data were conducted in all sections of the United States. This is the first complete survey of the fisheries of the United States and Alaska since 1931. Statistics on the various fisheries were collected by the following field agents: Robert Balkovic, Billy Greer, Homer Haberland, Jack Hammond, Donald Hosterman, Dwight Hoy, Charles Lyles, Richard Marchant, David McKown, Herbert Munger, Russell Soulen, Carl Tendick, James Wharton, Raymond Wilson, and Francis Wood. The surveys in Washington and Oregon were supervised by Charles Reardon and those in California were under the direction of Victor Samson. Catch data for the Great Lakes were assembled by the staff of Dr. James Moffett of the Branch of Fishery Biology, and those for the fisheries of Alaska were collected by the Branch of Alaska Fisheries of the Service.

Information on landings at Massachusetts ports was collected in cooperation with the Branch's Market News Section and the Branch of Fishery Biology. Data on the Hawaiian Fisheries were furnished by the Division of Fish and Game, Board of Commissioners of Agriculture and Forestry of the Territory of Hawaii.

The statistical surveys conducted during 1951, for 1950 data, were under the general direction of C. Eldred Peterson, Chief, Statistical Section, assisted by Bob Finley, Fishery Marketing Specialist. The Survey material was assembled, tabulated, and prepared for publication by the staff of the Statistical Section under the direction of Bob Finley, Fishery Marketing Specialist. He was assisted by Marion Davis, Mary Donahue, Elsie English, Evelyn Hecht, Alice Hnatiw, Delia Ridge, Melissa Tinkey, and Mary Willis. Operation of the tabulating unit was directed by Mabel Swart, assisted by Adele Marshall and Marie Voigt. G. I. Sundstrom prepared most of the illustrations contained in the report.

In assembling the data on the fisheries, all appropriate records collected by the various State fishery agencies were used. In certain areas, information complete enough to be used by the statistical agents was available from the state agencies, and in these states only partial surveys were conducted. Statistics on the imports and exports of fishery products were obtained from the Bureau of the Census.

Information on the means of collecting the data in the various areas and an explanation of terms used may be found in Section 13 of this publication.

Grateful acknowledgment is extended to the State and Federal agencies and to the various individuals who cooperated in furnishing portions of the data contained in this volume.

SECTION 1.- GENERAL REVIEW

Surveys covering the catch of fish and shellfish for the year 1950 were made in all areas of the United States and Alaska. This was the first complete survey since 1931. There are shown in this publication county tables for the entire Atlantic and Gulf Coastal areas, except in Maryland, showing data on the catch and operating unit information by counties for these regions. Also shown in this Digest are data on the operating units in the Great Lakes which have not been available since 1940. The Mississippi River Fisheries, which were last collected in 1931, are shown by states and waters in Section 9.

During 1950, the catch of fishery products in all sections of the United States and Alaska totaled 4,884,909,000 pounds, valued at \$343,876,000 to the fishermen. This was an increase of 2 percent in quantity and 1 percent in value compared with the partially estimated production of 1949. The average price of all fish to the fishermen decreased slightly from 1949 to 1950, although the values were generally variable and the prices of some species increased.

Outstanding developments during the year were the record landings of tuna and tuna-like fishes; the continued high production of menhaden; and the expansion of the shrimp fishery in the Gulf Area. During 1950, the production of tuna and tunalike fishes on the Pacific Coast set a new record with landings totaling over 390,000,000 pounds. This catch exceeded the previous high established in 1949 by over 58 million pounds. The catch of menhaden off the Atlantic and Gulf States during 1950 continued to hold up well with the production of menhaden only 7 percent less than the record established in 1949. The catch of menhaden was far greater than that of any other species taken by United States and Alaska fishermen. The Atlantic Coast catch of ocean perch (rosefish) during 1950 totaled 207,793,000 pounds -- a decrease of 14 percent compared with the previous year. A wage disagreement between seafood plant workers and plant operators during the summer was partially responsible for the decline in ocean perch (rosefish) landings. The catch of salmon in the Pacific Coast States and Alaska decreased over 155 million pounds or 32 percent during 1950 as compared with the previous year. The decrease during the year was due mainly to a drop of almost 138 million pounds in the catch of pink salmon in Southeastern Alaska and to the usual even-numbered year failure of the pink salmon run in the Puget Sound District of Washington. During 1950, the production of shrimp in the United States and Alaska amounted to over 191 million pounds valued at over \$43 million to the fishermen. Compared with 1945, when the last complete survey on the shrimp fishery was made, this represented an increase during 1950 of less than 1 percent in quantity but an increase of 103 percent in value compared with the former year. The Pacific Coast pilchard catch during 1950, amounted to over 714 million pounds, valued at slightly more than \$12 million to the fishermen. This was an increase in both quantity and value of 13 percent compared with the landings of the previous year. The mackerel catch on the Atlantic Coast decreased 47 percent in volume compared with the previous year while the catch of Pacific mackerel decreased 34 percent in poundage during the same period.

The price of fish oil, which was as low as 5-1/2 cents per pound early in the year, rose sharply and reached 19 to 20 cents per pound. The price of canned Maine sardines was very low early in the year, but finally was stabilized at about \$6.50 per case at the year's end. The price of canned California pilchards and tuna was weak early in the year but recovered somewhat during the latter part of 1950. Canned salmon prices rose sharply as soon as the small size of the 1950 pack became apparent. The price to the fishermen for tuna remained steady throughout the year, with yellowfin bringing \$310 per ton. The price of fish meal dropped very sharply early in the year and then recovered slightly. The threat of a general conflict brought about by the action in Korea had much to do with the boost in fish prices during the year.

The per capita consumption of fishery products in the United States in 1950 totaled 11.5 pounds, edible weight. During the previous year the per capita consumption was 11.4 pounds. This was considerably above the wartime level of approximately 9 pounds when a large portion of the canned pack was allocated to the armed forces and to lend-lease distribution. The 1935-1939 average was 11.1 pounds.

The following table which contains recorded production for the areas in which surveys were made for the years shown and estimates for other regions, indicates the trend of the yield and value of the domestic catch during recent years.

GENERAL REVIEW

UNITED STATES AND ALASKA CATCH, 1939 - 1950

Year	Pounds	Value to the fishermen	Average price per pound
1939	4,443,328,000	\$96,532,000	2.17¢
1940	4,059,524,000	98,957,000	2.44
1941	4,900,000,000	129,000,000	2.63
1942	3,876,524,000	170,338,000	4.39
1943	4,202,000,000	204,000,000	4.85
1944	4,500,000,000	213,000,000	4.73
1945	4,575,500,000	269,900,000	5.82
1946	4,456,000,000	310,000,000	6.96
1947	4,344,000,000	307,600,000	7.08
1948	4,575,000,000	367,000,000	8.02
1949	4,796,000,000	339,000,000	7.06
1950	4,884,909,000	343,876,000	7.04

A total of 812 vessels of 5 net tons and over received their first documents as fishing craft in 1950. This was 19 percent less than the number entering the fleet the previous year, but still considerably more than the number documented annually prior to 1943. In the five years ending with 1950, a total of 5,383 vessels received their first documents as fishing craft. In 1940, the entire fleet in the United States and Alaska totaled only 5,562 vessels. Despite the large increase in the size of the fleet, the annual catch has not increased proportionately compared with the prewar production. This has been due largely to the low yields of salmon in Alaska and pilchards in California.

VESSELS FIRST DOCUMENTED AS FISHING CRAFT, 1936 - 1950

Year	Number	Year	Number
1936	1/ 435	1944	635
1937	33	1945	741
1938	1/ 376	1946	1,085
1939	357	1947	1,300
1940	320	1948	1,184
1941	354	1949	1,002
1942	358	1950	812
1943	358		

1/ Data are partly estimated.

San Pedro, California, continued to be the nation's leading fishing port, both in quantity and value with landings of approximately 940 million pounds, valued at \$43.5 million to the fishermen. Gloucester, Massachusetts, was in second place, with approximately 196 million pounds followed by San Diego, California, with approximately 190 million pounds.

It is estimated that the 1950 catch was marketed as follows: 1,692 million pounds (round weight) as fresh and frozen products; 1,720 million pounds were used for canning; 1,372 million pounds for bait and byproducts and 100 million pounds for cured products.

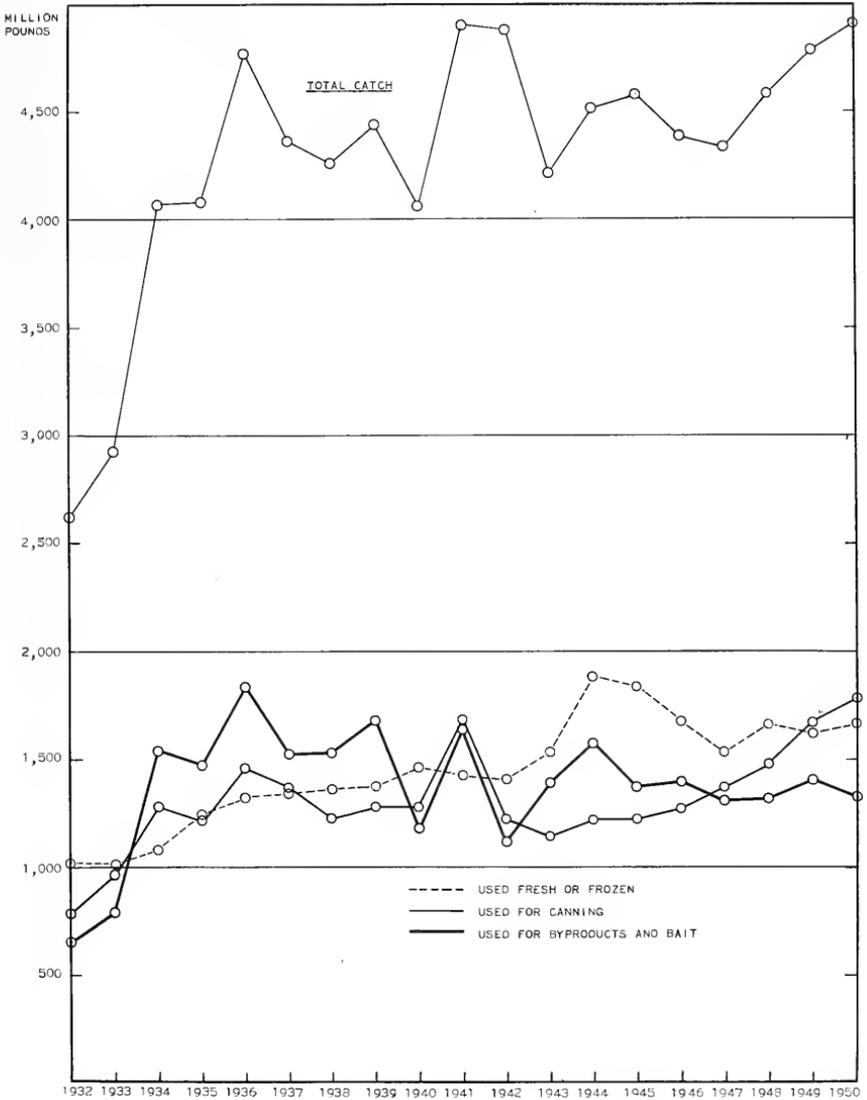

The 1950 production of canned fishery products in the United States and Alaska amounted to 967,115,000 pounds valued at \$331,335,000 at the processors' level. The output of fishery byproducts was valued at \$77,188,000. Compared with 1949, the value of canned products increased 12 percent in value while the value of byproducts decreased 2 percent.

Over 287,000,000 pounds of fishery products were frozen during 1950. This was an increase of almost 1.4 million pounds compared with the freezings of the previous year, but 4.8 million pounds less than the record year of 1948.

The value of foreign trade in fishery products in the United States during 1950 amounted to \$225,770,000, of which \$198,296,000 represented the value of products imported for consumption and \$27,474,000 the value of exports of domestic fishery products. Among the important items received in much greater volume during 1950 than in 1949, were fresh or frozen tuna, salmon, halibut, shrimp, and groundfish and other fillets; canned tuna; and sperm oil. Exports of canned salmon decreased from 12.8 million pounds in 1949 to 1.7 million pounds in 1950, but the quantity of fish oil exported nearly doubled in the same period.

A review of the fisheries of each geographical area will be found at the beginning of each section in this volume. Summaries of the more important specific fisheries will be found in Section 12. Summarized data of the operating units and catch for all areas have been previously published in Current Fishery Statistics No. 841.

^{1/} THE CATCH OF RING AND LAMPARA NETS IN CALIFORNIA HAS BEEN INCLUDED WITH PURSE SEINES.

^{2/} THE CALIFORNIA CATCH BY TRAMMEL NETS HAS BEEN INCLUDED WITH GILL NETS.

^{3/} INCLUDES CATCH BY BOX, BRUSH, CRAB, CRAWFISH, AND SPINY LOBSTER TRAPS.

^{4/} THE CATCH BY TONGS, RAKES, AND BY HAND HAS BEEN INCLUDED WITH DREDGES.

NOTE:—DATA ARE NOT AVAILABLE ON THE QUANTITY AND VALUE OF THE CATCH BY TYPES OF GEAR IN ALASKA. HOWEVER THE TOTAL CATCH HAS BEEN ALLOCATED TO THE VARIOUS GEAR THROUGH ESTIMATES. THE CATCH OF ALL TRAPS IN ALASKA HAS BEEN CREDITED TO POUND NETS.

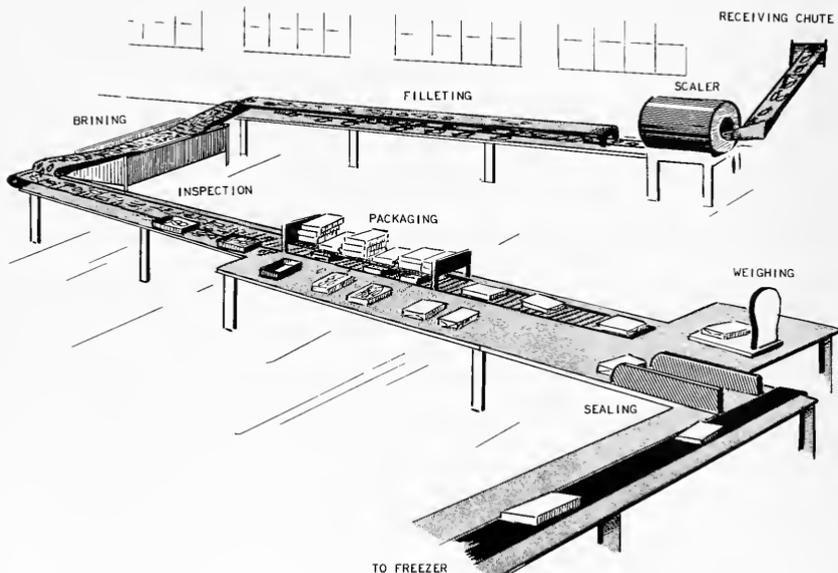

MANUFACTURED FISHERY PRODUCTS

The output of manufactured products (canned, cured, packaged, and byproducts) in the United States and Alaska during 1950 had a value of 579.6 million dollars. Canned products accounted for 57 percent of the total; packaged shellfish, 14 percent; byproducts, 13 percent; packaged fish, 10 percent; and cured fish, 6 percent.

The pack of canned fishery products in 1950 amounted to 967,115,315 pounds, valued at \$331,335,347 to the packers. This was an increase of 13 percent in volume and 12 percent in value compared with the previous year. The increase in volume resulted principally from record packs of tuna and California sardines (pilchards). The pack of tuna and tunalike fishes, which amounted to 9,016,541 cases, (174,794,436 pounds), valued at \$112,830,094, was 1,726,221 cases greater than the 1949 production. Cannery received 15 million dollars more for the pack than in the previous year. The 1950 pack of tuna was the sixth consecutive record pack of these fish. The 1950 pack of California sardines (pilchards) amounted to 5,070,805 standard cases, (228,186,225 pounds), valued at \$26,345,609. Compared with the previous year, this was an increase of 35 percent in volume and 23 percent in value.

The 1950 production of fishery byproducts in the United States and Alaska was valued at \$77,188,366 -- 2 percent less than in the previous year. The principal byproducts were marine animal oils, 21,763,849 gallons valued at \$17,472,709; marine animal scrap and meal, 239,954 tons, valued at \$29,253,735; marine pearl-shell, oyster-shell, and fresh-water shell products, valued at \$17,253,566; and fish solubles, which were valued at \$4,461,362. Byproducts were produced in 339 plants in 24 states and Alaska during 1950:

1/ THIS ITEM IS USUALLY AN INTERMEDIATE PRODUCT, AND ALTHOUGH INCLUDED IN THE TOTAL, MAY BE SHOWN IN ITS FINAL STAGE OF PROCESSING ELSEWHERE IN THE TABLE.

2/ THIS ITEM HAS BEEN INCLUDED UNDER "UNCLASSIFIED PRODUCTS".

3/ A SMALL PRODUCTION OF BLUEFIN IS INCLUDED WITH THE SKIPJACK PRODUCTION.

4/ INCLUDES PACKS OF ALBACORE, LITTLE, BLUEFIN, AND YELLOWFIN TUNA PRODUCED ON THE ATLANTIC COAST.

5/ INCLUDES FRESH AND FROZEN FILETS, STEAKS, OR SPLIT "BUTTERFLY" FILETS OF BUTTERFISH, CARP, CROAKER, DRUM, POMPANO, PORGY, SEA BASS, SEA TROUT, SHAD, SHARK, SHEEPSHEAD, SNOOK, STRIPED BASS, SWELLFISH, SWORDFISH, TRIGGERFISH, AND UNCLASSIFIED SPECIES.

6/ INCLUDES FROZEN ALEWIFE ROE; COODFISH CAKES; SHAD ROE; CREAMED TUNA; ABALONE PATTIES AND STEAKS; BLUE CRABS IN CAKES, PATTIES, BOBBED, DEVILED, AND STUFFED; SHRIMP STEW AND SHRIMP AND OKRA; CLAM CHOWDER; OYSTER STEW; BREADED SCALLOPS; TURTLE MEAT; FROG LEGS; SEAFOOD GUMBO; AND SEAFOOD AND SHORE DINNERS.

7/ INCLUDES CANNED ROCK CRAB MEAT; BLUE HARD CRAB, BISQUE AND DEVILED; SOFT SHELL CRABS; DUNGENESS CRAB COCKTAILS AND SMOKED CRAB MEAT; LOBSTER BISQUE AND NEWBURG; CLAM BISQUE, CAKES, IN SHELLS AND CLAMBURGERS; CONCHS; MUSSELS; SCALLOPS; FROG LEGS; AND BOUILLABAISE.

8/ INCLUDES SALTED ALEWIFE ROE, HAKE STRIPS, SEA HERRING ROE, LAKE TROUT, POLLOCK, SABLEFISH, SALMON EGGS, UNCLASSIFIED CAVIAR, AND SHARK LEATHER.

9/ INCLUDES SMOKED BLUEFISH, FINNAN HADDIE, HALIBUT, SMELT, SUCKERS, TUNA, WHITE PERCH, YELLOW PIKE, AND UNCLASSIFIED FISH.

10/ INCLUDES MEAL AND DRY SCRAP OF ANCHOVY, COD LIVER PRESS CAKE, FISH POMACE, SHARK, HORSESHOE CRAB, AND UNCLASSIFIED SPECIES.

11/ INCLUDES BODY OIL OF ANCHOVY, BLACKFISH, OCEAN PERCH, AND UNCLASSIFIED SPECIES.

12/ INCLUDES LIVER OIL FROM BURBOT, HAKE, HALIBUT, LINGCOD, MACKEREL, POLLOCK, WHALE, AND MIXED LIVERS AND VISCERA OIL.

13/ INCLUDES PRODUCTION OF AGAR-AGAR, ALGIN, AMINO ACIDS, AND VITAMIN CONCENTRATES, IRISH MOSS EXTRACTIVES, TINGLASS, KELP PRODUCTS, PEARL ESSENCE, AND CRAB SHELLS FOR TABLE USE.

NOTE:--SOME OF THE ABOVE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM RAW PRODUCTS IMPORTED FROM ANOTHER COUNTRY, THEREFORE THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH WITHIN THE UNITED STATES AND ALASKA. THE LIME AND POULTRY FEED MANUFACTURED FROM SHELL PRODUCTS WAS PRODUCED FROM OYSTER SHELLS WHICH ARE NOT INCLUDED IN THE CATCH STATISTICS FOR THESE SHELLFISH.

CANNED FISHERY PRODUCTS AND BYPRODUCTS

Canned fishery products and byproducts valued at \$408,523,713 at the processor's level were produced in the United States and Alaska during 1950. This represented an increase of 9 percent compared with the previous year. The value of canned products increased 12 percent while the value of the byproducts decreased 2 percent.

The 1950 pack of canned salmon amounted to 4,309,804 standard cases (206,870,592 pounds), valued at \$109,541,178 to the canners. Compared with 1949, this was a decline of 22 percent in volume, but an increase of 6 percent in value. The pack was the third most valuable in history. The decrease in volume during 1950 was due mainly to the smaller pink salmon pack. This was caused by two factors. First, there was a catch of only 38 million pounds of pink salmon in Southeastern Alaska compared with the 1949 catch of about 176 million pounds, the largest production since 1941. Second, as usual in even-numbered years, there was no run of pink salmon in the Puget Sound District of Washington in 1950.

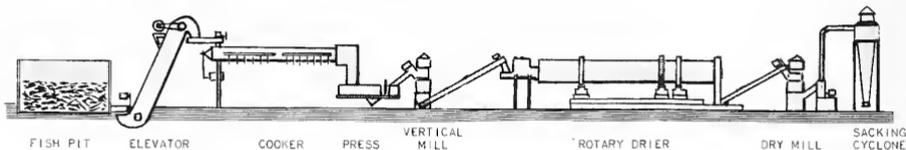

The pack of tuna and tunalike fishes, which amounted to 9,016,541 cases (174,794,436 pounds), valued at \$112,830,094, was 1,726,221 cases greater than the 1949 production. The 1950 tuna pack was the sixth consecutive record pack of these fish, and the canners received 15 million dollars more for the pack than in the previous year. A significant development in the tuna industry during 1950 was the trend toward packing less tuna as solid pack, due to increasing interest in the chunk style.

The 1950 pack of California sardines (pilchards) amounted to 5,070,805 standard cases (228,186,225 pounds), valued at \$26,345,609. Compared with the previous year, this was an increase of 35 percent in volume, and 23 percent in value. The 1950 pack was the largest in history. In Maine, the pack of sardines rose from 3,074,523 cases in 1949 to 3,844,164 cases in 1950. This was also a new record.

California led in the production of canned fishery products with a pack of 517,045,017 pounds, valued at \$140,251,694. Alaska was second with 159,988,680 pounds, valued at \$83,777,397. These areas accounted for 70 percent of the volume of the 1950 pack and 68 percent of its value.

The 1950 production of fishery byproducts in the United States and Alaska was valued at \$77,188,366 -- 2 percent less than in the previous year. The principal byproducts were marine-animal oils, 21,763,849 gallons valued at \$17,472,709; marine-animal scrap and meal, 239,954 tons, valued at \$29,253,735; marine pearl-shell, oyster-shell, and fresh-water shell products, valued at \$17,253,566; and fish solubles, valued at \$4,461,362. Byproducts were produced in 339 plants in 24 states and Alaska in 1950.

TOTAL	-	-	13,208,356	

1/ INCLUDES THE PRODUCTION OF AGAR-AGAR, ALGIN, AMINO ACIDS AND VITAMIN CONCENTRATES, IRISH MOSS, ISINGLASS, KELP PRODUCTS, PEARL ESSENCE, AND CRAB SHELLS.

PACKAGED FISH

The production of fresh and frozen packaged fish (fillets, steaks, and split "butterfly") in continental United States during 1950 totaled 192,138,082 pounds valued at \$53,739,633 to the processor. This represented a decrease of 1 percent in volume but an increase of 11 percent in value compared with the previous year.

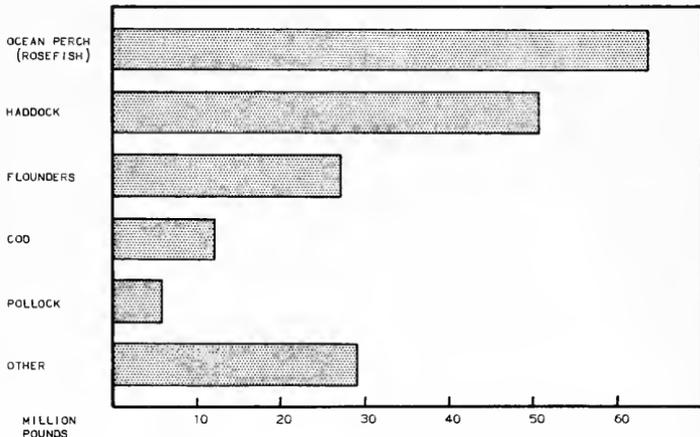

Ocean perch (rosefish) fillets, with a production of 63,128,125 pounds, was again the largest single item of packaged fish produced.

Haddock fillets with 51,197,245 pounds, and flounder fillets with 28,446,400 pounds, were second and third in importance. Ocean perch (rosefish) was also the most valuable species packaged during the year with a value of \$15,126,456, followed by haddock with a value of \$14,277,013 and flounders valued at \$9,970,076. Of the total packaged fish reported, 96 percent was filleted, 3 percent steaked, and the remaining 1 percent split "butterflied".

Because of the importance of the groundfish fishery in New England, that area continued to lead all others in the production of packaged fish and accounted for 78 percent (150,504,368 pounds) of the domestic production. The Pacific Coast States accounted for 12 percent; the Great Lakes States, 5 percent; the Middle Atlantic States, 4 percent; and the Chesapeake, South Atlantic, and Gulf States, the remaining 1 percent.

Data in this section cannot be correlated directly with the information published in the section on Manufactured Fishery Products, as that section includes a small production in Alaska which is not included in the following tables. Data on the production of packaged fish during 1950 were previously published in "Current Fishery Statistics No. 672".

PRODUCTION OF PACKAGED FISH, 1950

GENERAL REVIEW

SUMMARY OF PRODUCTION OF PACKAGED FISH, 1950

ITEM	FILLETS		STEAKS

NOTE:--SMALL QUANTITIES OF A FEW SPECIES HAVE BEEN INCLUDED WITH MISCELLANEOUS ITEMS TO AVOID DISCLOSURE THE PRODUCTION OF INDIVIDUAL FIRMS.

PACKAGED FISH WERE PRODUCED IN THE FOLLOWING STATES IN THE SECTIONS INDICATED: NEW ENGLAND--MAINE, MASSACHUSETTS, AND RHODE ISLAND; MIDDLE ATLANTIC--NEW YORK AND NEW JERSEY; CHESAPEAKE, SOUTH ATLANTIC, AND GULF--MARYLAND, VIRGINIA, NORTH CAROLINA, SOUTH CAROLINA, ALABAMA, GEORGIA, AND FLORIDA; GREAT LAKES--NEW YORK, PENNSYLVANIA, OHIO, ILLINOIS, MICHIGAN, WISCONSIN AND MINNESOTA; PACIFIC--WASHINGTON, OREGON, AND CALIFORNIA.

FROZEN FISH TRADE

FISH FROZEN

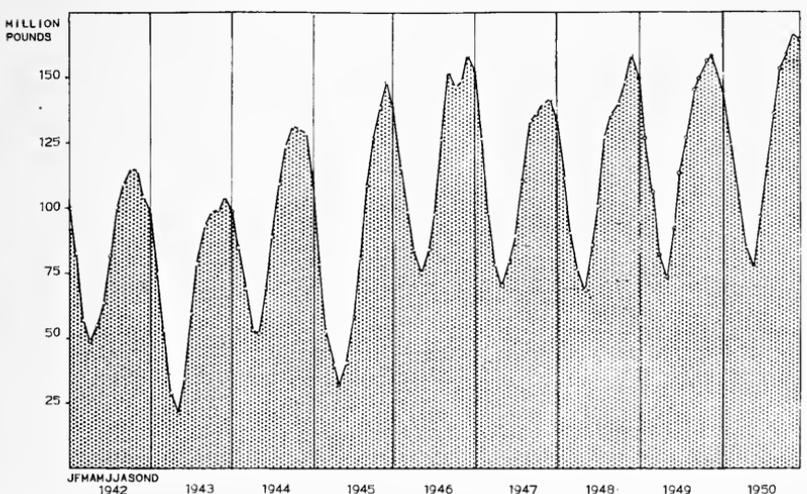

During 1950, a total of 287,189,592 pounds of fishery products were reported frozen by over 250 cold storage plants which reported their activities to the Fish and Wildlife Service. This was an increase of almost 1.4 million pounds compared with the freezings of the previous year, but 4.8 million pounds less than the record year of 1948. It is estimated that a catch of approximately 555 million pounds of fish and shellfish was required to yield the 287 million pounds of round, dressed, and drawn fish, fish fillets, and shellfish frozen in 1950.

During the year, 74 percent of the freezings consisted of salt-water fish; 23 percent shellfish; and 3 percent fresh-water fish. In 1949, the production of salt-water fish comprised 82 percent of the total freezings, while shellfish contributed 16 percent and fresh-water fish the remaining 2 percent. Five items accounted for 66 percent of the total poundage frozen during 1950. These were: ocean perch (rosefish) fillets and shrimp (including shrimp meat) which each accounted for 19 percent; halibut, 11 percent; haddock fillets, 9 percent; and headed and gutted whiting, 8 percent. In 1949 these five items comprised 61 percent of the total freezings. Shrimp recorded the greatest growth, moving from 11 percent of the total freezings in 1949 to 19 percent of the total during 1950. (Information on the development and expansion of the shrimp fishery may be found in Section 6 entitled Gulf Fisheries.)

According to geographical sections, the New England States led all other sections in the quantity of fishery products frozen, accounting for 47 percent of the total. The South Central Area ranked second with 17 percent, followed by Alaska with 13 percent and the Pacific Coast States with 12 percent.

The greater volume of cold storage space, coupled with the increased acceptance of frozen products by the public is again believed to have been mainly responsible for the continued large freezings of fishery products during 1950.

NOTE:--THE SECTIONS INDICATED INCLUDE THE FOLLOWING STATES:

NEW ENGLAND--MAINE, MASSACHUSETTS, RHODE ISLAND, AND CONNECTICUT.

MIDDLE ATLANTIC--NEW YORK, NEW JERSEY, AND PENNSYLVANIA.

SOUTH ATLANTIC--MARYLAND, DISTRICT OF COLUMBIA, VIRGINIA, SOUTH CAROLINA, GEORGIA, AND FLORIDA.

NORTH CENTRAL, EAST--OHIO, INDIANA, ILLINOIS, MICHIGAN, AND WISCONSIN.

NORTH CENTRAL, WEST--MINNESOTA, IOWA, MISSOURI, NORTH DAKOTA, NEBRASKA, AND KANSAS.

SOUTH CENTRAL--KENTUCKY, TENNESSEE, ALABAMA, MISSISSIPPI, LOUISIANA, TEXAS, AND ARKANSAS.

PACIFIC--WASHINGTON, OREGON, CALIFORNIA, COLORADO, UTAH, AND MONTANA.

ALASKA.

HOLDINGS

Holdings of frozen fishery products in more than 250 domestic cold storage plants reporting to the Fish and Wildlife Service on the first of each month during 1950 averaged a record 128,323,000 pounds. This monthly average is approximately 4.6 million pounds above the average figure for the former high year of 1949. Ten years earlier in 1940, these holdings averaged only 68,110,000 pounds. Holdings on January 1, which were a carry-over from the 1949 stocks, were 146,813,000 pounds. The peak, reached on November 1, amounted to over 166 million pounds. The low point for holdings during the year was reached on May 1, when slightly over 79 million pounds were in storage. According to the geographical distribution of average monthly holdings, the New England States ranked first, followed by the Middle Atlantic and Pacific Coast States.

COLD-STORAGE HOLDINGS OF CURED FISH

During 1950, monthly cold-storage holdings of cured herring averaged 12,614,000 pounds, while those of mild-cured salmon averaged 4,081,000 pounds. Compared with 1949, this represents an increase of 976,000 pounds or 8 percent in the average monthly holdings of cured herring, and an increase of 315,000 pounds or 8 percent in average mild-cured salmon stocks. Cold storage stocks of cured herring were largest on July 1 when they reached slightly above 15.6 million pounds. The peak period for mild-cured salmon during 1950 was on October 1, when the stocks reached almost 7 million pounds.

GENERAL REVIEW

FOREIGN FISHERY TRADE

During 1950, the value of United States foreign trade in fishery products amounted to \$225,770,032, of which \$198,296,252 represented the value of products imported for consumption and \$27,473,780 the value of exports of domestic fishery products. The value of imports for consumption was 31 percent greater than the figure of the previous year, while the value of exports of domestic fishery products decreased 22 percent compared with 1949. The value of fishery products entered for consumption reached an all-time high during 1950. The former high year was in 1948 when the value of imports totaled almost 157 million dollars.

Fishery imports during 1950 consisted of 639,725,074 pounds of edible fishery products, valued at \$158,413,687, and non-edible products valued at \$39,882,565. Among the important items received in much greater volume during 1950 than in 1949, were fresh or frozen tuna, salmon, halibut, shrimp, and groundfish and other fillets; canned tuna; and sperm oil.

Fishery exports during 1950 were made up of 121,623,421 pounds of edible fishery products, valued at \$18,856,104, and non-edible products valued at \$8,617,676. Exports of canned salmon decreased from 12.8 million pounds in 1949 to 1.7 million pounds in 1950, but the quantity of fish oil exported nearly doubled in the same period.

The data presented in the following tables are preliminary and subject to minor revisions as they have been prepared for publication prior to the issuing of 'Foreign Commerce and Navigation of the United States, 1950' by the Bureau of the Census.

SECTION 2.- NEW ENGLAND FISHERIES

(Area XXII)²

The 1950 catch of fish and shellfish in the coastal areas of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island and Connecticut) totaled 1,006,589,500 pounds valued at \$60,576,490 to the fishermen. This represented an increase of 6,613,200 pounds or 1 percent in quantity and \$2,039,614 or 3 percent in value compared with the landings of the previous year. Ocean perch (rosefish) receipts (207,793,000 pounds) were over 29 million pounds less during 1950 than they were in 1949, while haddock landings (157,764,700 pounds) were over 24 million pounds greater during 1950.

During 1950, the demand for fresh fish at the docks in the New England Area was moderate to good, with the market generally steady -- a considerable improvement over 1949. The demand was light at the beginning of the year with a weak market which was a carryover from the slack period at the end of 1949. However, the demand improved markedly before many weeks and the market strengthened noticeably. This improvement continued to a peak toward the latter part of March at the close of Lent. In April, the market weakened slightly but rallied in a short time and continued steady through the remainder of the spring. The national emergency, created by the military action in Korea, stimulated the demand during the usually slow summer months, and the market was strong. Supplies were noticeably short in the early fall, with a good demand and a strong market. Supplies increased shortly thereafter, and the demand continued good, while the market remained steady to the end of the year. The usual end-of-the-year slump did not occur in 1950, and there were very few sharp day-to-day fluctuations in the fresh market during the year.

In New England the market for frozen fish was dull for most items as the year opened. The main exception was haddock fillets, for which there was a good demand for the short supply on hand. Demand improved for frozen fish shortly after the beginning of the year for all items except headed and gutted whiting. The outbreak of hostilities in Korea caused some scare buying in late July. This buying, to build up inventories against expected price increases, lasted only about a week, and the market returned to near-normal. The demand, however, continued good throughout the remainder of the year and the market ended the year much stronger than usual.

The apparent scarcity of fish on the offshore grounds, so evident the preceding few years, continued for all species with the exception of scrod haddock. This species was abundant on the grounds from June through December, comprising much of the catch, and was the factor which saved the Boston boats from an unsuccessful year. Although these large catches of scrod haddock were welcome from a financial standpoint, they may not have been wise from a conservational standpoint. According to the biologists, the destruction of baby scrod incidental to the haddock fishery was greater in 1950 than in any previous year. This destruction may be reflected with the yield from this age group being less than its full potential.

Late in the year a new fishery for Boston vessels was developed on the southern edge of the Grand Banks of Newfoundland. Large Boston trawlers fishing for flatfish in this area came upon a seemingly unlimited supply of sea dab. Fishermen reported that the concentration of fish on these grounds was probably the greatest they had ever experienced for any species of bottom fish in the North Atlantic. It was necessary to limit the tows of the nets to a matter of only a few minutes to prevent overloading. However, the steaming time to and from these grounds totaled eight days, and such long trips were hazardous in the North Atlantic during the winter months.

Storms at sea, which control to a great degree the overall production of the New England fisheries, were more numerous than usual during 1950, although they were mostly of short duration. The first three months of the year brought numerous storms. Good weather then prevailed until a small hurricane struck offshore in August. Again, in September, high winds reaching gale force swept over the fishing banks. The weather remained good until the end of November and from then until the end of the year the weather was variable.

² This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV.

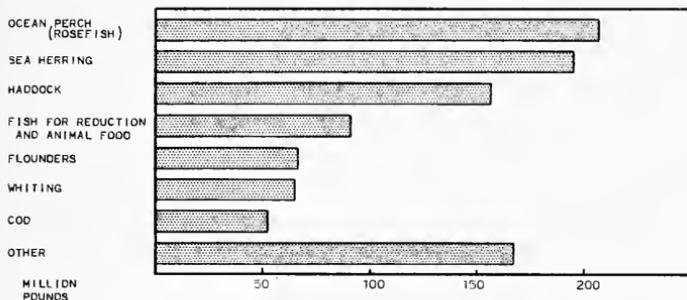

Poor fishing plagued the mackerel seiners from the spring when they started their chase of mackerel off the Virginia coast, to the middle of December off the coast of Massachusetts. In mid-summer, the entire fleet had reconverted to dragging because the results of their seining efforts were so fruitless.

A large Boston trawler, converted during the year to cut, package, and freeze fillets at sea, made its first trip in 1950. Three trips were made before the end of the year at which time the venture was abandoned largely because of manning problems.

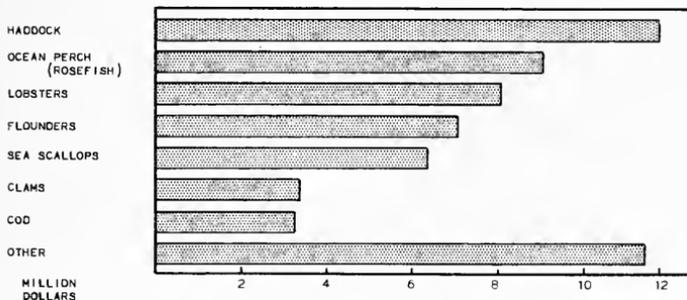

A bill which would require that all packaged frozen foods, including fishery products, be labeled with the date frozen, was defeated in the Massachusetts State Legislature in the spring of 1950. Dealers of fishery products in the Boston area took the lead in successfully opposing the measure.

The following tables contain summarized and detailed information on the 1950 catch and operating units of the New England States. Condensed summary data on the operating units and catch by states of the New England States, appearing on the following pages, have been previously published in Current Fishery Statistics No. 800.

LANDINGS AT MAINE PORTS

In 1946, the Fish and Wildlife Service, in cooperation with the Maine Department of Sea and Shore Fisheries, began to collect, compile, and publish monthly and annual data on the landings of fish and shellfish in Maine. These data are published in detail in 'Maine Landings' which is in the Current Fishery Statistics Series of reports issued by the Service. In addition to the individual monthly reports, two annual summaries were published in 1950, one listing the catch by months, (Current Fishery Statistics, No. 622) and the other listing the catch by gear and county, (Current Fishery Statistics, No. 623).

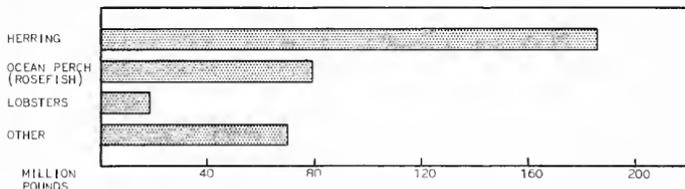

The data on Maine landings during 1950 represent the landed weight of the fish. The figures on the landings of shellfish and marine products, other than fish, represent the round weight of the catch except for bivalve and univalve mollusks, which are reported in pounds of meats.

Landings of fishery products at Maine ports in 1950 totaled 353,279,886 pounds, valued at \$14,688,742 to the fishermen. This represented an increase of 21 percent in quantity but a decrease of 2 percent in value compared with the previous year. An increase in herring landings of over 35 million pounds and an increase in ocean perch (rosefish) receipts of almost 24 million pounds were the main reasons for the noticeable gain in the 1950 landings. Herring, used principally in the canning of Maine sardines, accounted for 52 percent of the total poundage and 9 percent of the total value. Although lobsters accounted for only 5 percent of the total catch, they represented 44 percent of the value, making them the most valuable single item taken.

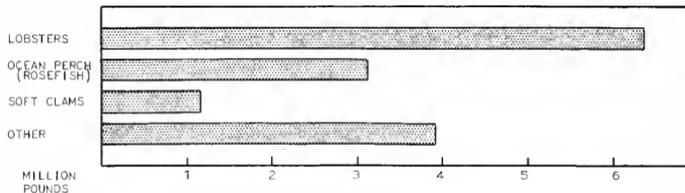

During the year, landings at Portland, Maine, totaled 62,883,002 pounds valued at \$2,578,403. Imports of fresh sea herring into the Maine and New Hampshire Customs District during 1950 totaled 39,184,232 pounds.

Prior to 1947, these landings were included in the bulletins entitled 'Landings at Certain New England Ports', summaries of which appear in annual Statistical Digests. To avoid duplication, beginning in 1947, data on Portland landings were omitted from these bulletins since the data appeared in the monthly and annual Maine reports.

MAINE LANDINGS, BY MONTHS, 1950

LANDINGS AT CERTAIN MASSACHUSETTS PORTS³

Because of the important role they play in the production of fishery products, detailed summarized statistics have been collected, and published monthly for the landings at Boston, Gloucester, New Bedford, Provincetown, Massachusetts, and other Cape Cod ports. Landings of fishing craft of all sizes at the ports named are included in the data in the following tables.

It should be noted that these figures represent actual landings which have not been converted to round weight, therefore, the data are not directly comparable to the catch figures shown in the General Review, regional tables, or the section entitled "Review of Certain Major Fisheries."

During 1950, landings of fishery products at Boston, Gloucester, New Bedford, and Cape Cod ports amounted to 522,742,985 pounds valued at \$36,520,708 to the fishermen. This represented a decrease of 7 percent in volume but an increase of 5 percent in value compared with 1949. Ocean perch (rosefish) landings amounted to 128,511,470 pounds. However, the receipts of this species during 1950 were 52,970,662 pounds below the 1949 catch. This was mainly caused by a wage disagreement between seafood workers and plant operators during the summer of 1950. Of the total landings, haddock and ocean perch (rosefish) each accounted for 25 percent; flounders, 10 percent; and cod 7 percent. In 1949, ocean perch (rosefish) accounted for 32 percent; haddock, 20 percent; hake, 8 percent; and cod, 7 percent.

Gloucester retained its position as the Massachusetts port with the greatest volume, while Boston led in value of fish landed. Receipts at Gloucester accounted for 37 percent of the total poundage landed during the year, but only 25 percent of the total value; Boston was second in poundage with 33 percent of the total, but first in value with 37 percent; New Bedford ranked third in poundage with 22 percent, and second in value with 31 percent. Cape Cod was in fourth place in both quantity and value with 7 percent in both categories.

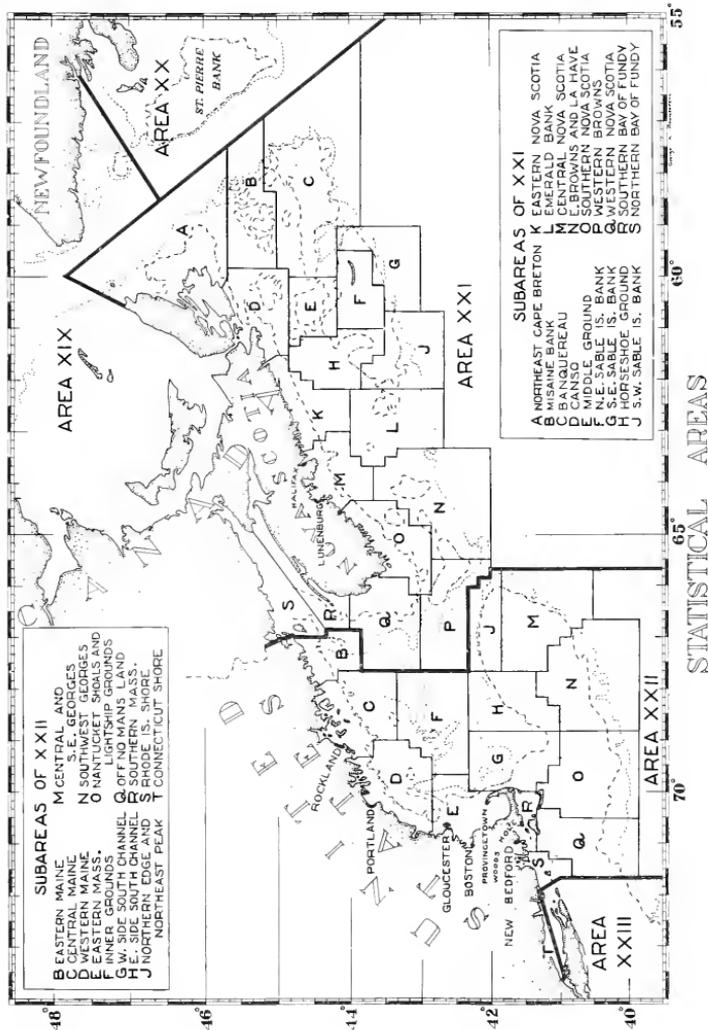

The fishing fleet operating on the fishing banks of the North Atlantic and landing fares at Boston, Gloucester, New Bedford, and Cape Cod ports during 1950, numbered 1,273 craft of all sizes. Of these, 432 landed in one or more of the Cape Cod ports. There may be some duplication between the craft operating out of Cape Cod ports and those landing at other ports. The landings listed in the following tables do not represent the entire catch of these vessels, as some also landed fares at other New England ports, at New York City, and at more southerly ports in connection with the southern mackerel and southern trawl fisheries.

Of the total landings, amounting to almost 523 million pounds, 33 percent was taken by large otter trawlers (over 150 gross tons); 31 percent by medium otter trawlers (51 to 150 gross tons); 26 percent by small otter trawlers (50 gross tons or under); 3 percent each by purse seines and scallop dredges; and the remaining 4 percent by other types of gear.

The following tables contain a detailed summary of information on the landings of fish and shellfish by fishing craft of all sizes in Boston, Gloucester, New Bedford, and Cape Cod ports. Information on the annual landings by ports was previously published in Current Fishery Statistics No. 624, while data on the landings by gear and area appeared in Current Fishery Statistics No. 625. Detailed information on the monthly landings by port and by gear and area of capture also were published in the Current Fishery Statistics Series.

³ The reader is referred to Section 13 of this document for an account of the years for which surveys of these fisheries have been made.

There is shown on the following chart the statistical areas and subareas used in reporting the catch landed at certain Massachusetts ports.

NOTE: DUTTER TRAMLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" DUTTER TRAM CRAFT ARE THOSE 50 GROSS TONS CAPACITY OR UNDER; "MEDIUM" DUTTER TRAMLS ARE THOSE 51 GROSS TONS OR OVER; "LARGE" DUTTER TRAMLS ARE THOSE 100 GROSS TONS OR OVER. "INCIDENTAL" CATCH TAKEN IN TWO OR MORE SUBAREAS DURING VOYAGE. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR.

EXCLUSIVE OF DUPLICATION, EXCEPT THAT CRAFT LANDING AT CAPE COD PORTS MAY BE DUPLICATED WITH CRAFT FISHING ELSEWHERE.

INCIDENTAL CATCH.

NOTE: DUTTER TRAMLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" DUTTER TRAM CRAFT ARE THOSE 50 GROSS TONS CAPACITY OR UNDER; "MEDIUM" DUTTER TRAMLS ARE THOSE 51 GROSS TONS OR OVER; "LARGE" DUTTER TRAMLS ARE THOSE 100 GROSS TONS OR OVER. "INCIDENTAL" CATCH TAKEN IN TWO OR MORE SUBAREAS DURING VOYAGE. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR.

NOTE:--THE ROMAN NUMERALS APPEARING IN THE ABOVE TABLE REFER TO THE VARIOUS SUBAREAS AND IS LISTED FOR CAPE COD IN THIS TABLE.
INVESTIGATIONS:
THE CATCH LANDED AT CAPE COD PORTS CANNOT BE ALLOCATED INTO THE NUMEROUS SUBAREAS AND IS LISTED FOR CAPE COD IN THIS TABLE.

SECTION 3.- MIDDLE ATLANTIC FISHERIES

(Area XXIII)⁴

The 1950 catch of fish and shellfish in the coastal areas of the Middle Atlantic States (New York, New Jersey, and Delaware) totaled 491,685,400 pounds, valued at \$28,843,369 to the fishermen. This represented a decrease of 6 percent in quantity but an increase of 6 percent in value compared with the landings of the previous year. Menhaden accounted for 76 percent of the total 1950 landings in the Middle Atlantic States, and 13 percent of the total value. Oysters, valued at \$9,608,735, accounted for 33 percent of the total value. They were the most valuable single item produced.

During 1950, the fisheries of the Middle Atlantic Area continued to remain in a fairly healthy condition, with the catches of most of the major species holding up quite well. The one outstanding exception in the production of food-fish was in the catch of mackerel. The receipts of this fish dropped from almost 21 million pounds in 1949 to less than 2 million pounds during 1950. The spring mackerel fishery, which is carried on mainly by the New England purse seine fleet, was very disappointing and the vessels returned to their home ports after only a short sojourn in the Middle Atlantic Area during the second week of April. The southbound mackerel in the fall were late in making their appearance, and showed only briefly in early December. Retail markets in the New Jersey area were forced to import Spanish mackerel from the south to offset the shortages which developed as a result of the failure of the local fishery.

The continued failure of the pound net fishery in the Middle Atlantic Area should also be noted. During 1949, there were 230 pound nets in operation, but in 1950 there were only 214 of these nets operating. Repeated losses from previous years had forced more operators to take their nets from the water. During the early spring of 1950, there were intermittent periods when it appeared that this fishery would return to its former bountiful production. Shad sporadically appeared in great numbers during March, while substantial catches of other desirable species periodically showed up in their former abundance. However, these brief appearances did not hold out. If the pound net operators had not had the profits from their summer retail markets to sustain them, the entire fishery would have been written off as a dismal failure again in 1950.

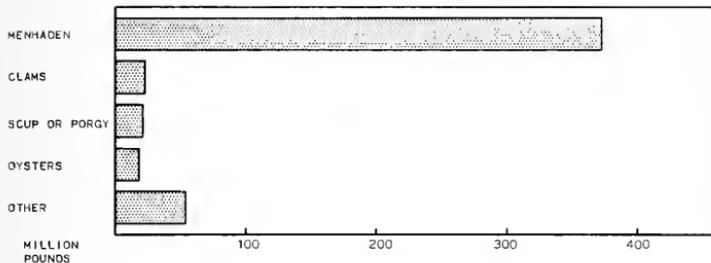

In late November the Middle Atlantic States were buffeted by a severe and unpredicted storm which brought great damage to the fisheries of this area. The pound nets were hardest hit and suffered a near total loss of all gear in operation at the time of the storm. Much of the piling was broken and washed out of the water. The clam fishery also suffered greatly in some areas with many of the small craft used in this fishery having capsized or swept away from their moorings. The oyster industry in Delaware Bay suffered no serious damage to installations. The majority of the damage was confined to electric motors and heating systems which were on the lower levels of the buildings. The extent of the damage caused by the storm to the oyster beds could not be measured.

Certain types of gear were difficult to obtain late in the year. Cotton nets were slow in coming through while steel equipment grew short because of allocation of greater quantities to be used by the military. Chandlers reported price increases of more than 20 percent over the prices of the previous year, and orders from wholesalers were six to twelve weeks late in arriving.

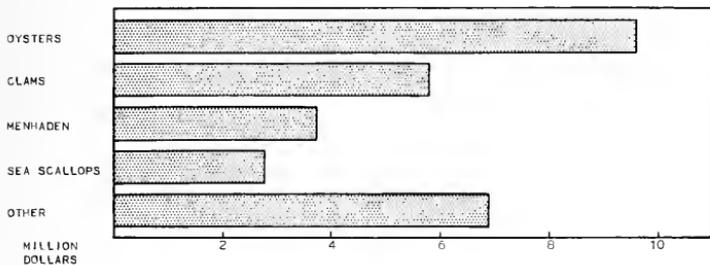

Condensed summary data of the operating units and catch by states of the Middle Atlantic Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 763.

⁴ This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV.

THIS ITEM HAS BEEN INCLUDED UNDER "UNCLASSIFIED PRODUCTS".

INCLUDES A SMALL PRODUCTION OF ACID SCRAP.

INCLUDES FRESH FILLETS OF HAKE, MACKEREL, AND POLLOCK.

INCLUDES FRESH AND FROZEN FILLETS OF HAKE, MACKEREL, POLLOCK, AND UNCLASSIFIED SPECIES.

INCLUDES CANNED ANCHOVY PASTE; HERRING AND SALMON SALAD SPREAD; STURGEON CAVIAR; TUNA FLAKES; ANIMAL FOOD;

CRAB, LOBSTER, SHRIMP, OYSTERS, AND SCALLOPS IN SAUCES, SOUPS, AND STEWS; TURTLE MEAT AND SOUP; FROG LEGS

NEWBURG; AND BOUILLABLISE.

INCLUDES CANNED WHOLE AND MINCED CLAMS, CLAM CHOWDER, AND CONCHS.

INCLUDES SMOKED PADDLEFISH (SPOONBILL CAT), SEA HERRING, AND SHAD.

INCLUDES SMOKED BLUEFISH, PADDLEFISH (SPOONBILL CAT), SEA HERRING, STURGEON, WHITING, AND UNCLASSIFIED SPECIES.

INCLUDES SALTED HERRING AND SALMON IN WINE SAUCE AND FRESH SHUCKED SURF CLAMS.

INCLUDES SALTED SEA HERRING IN WINE SAUCE AND FRESH AND FROZEN SHUCKED SURF CLAMS.

INCLUDES MENHADEN AND UNCLASSIFIED SCRAP AND MEAL; MENHADEN OIL; HAKE, MACKEREL, POLLOCK, SHARK, SWORDFISH,

TUNA, WHALE, AND MIXED LIVER OILS; AND FISH SOLUBLES.

INCLUDES HORSESHOE CRAB AND UNCLASSIFIED SCRAP AND MEAL, COD AND SHARK LIVER OIL, CURED SHARK LEATHER, AND

FISH SOLUBLES.

NOTE:--SOME OF THE ABOVE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM RAW PRODUCTS IMPORTED FROM ANOTHER STATE OR A

FOREIGN COUNTRY; THEREFORE THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH WITHIN THE STATE.

HUDSON RIVER SHAD FISHERY

During 1950, the shad fishery in the Hudson River gave employment to 522 fishermen who marketed 1,008,900 pounds of shad with a value of \$180,149 to the fishermen. This represented a decrease of 41 percent in quantity and a decrease of 37 percent in value compared with the landings of the previous year. There were 323 fewer fishermen employed in the Hudson River shad fishery in 1950 than in 1949. The average price per pound received by fishermen in 1950 was 17.9 cents compared with 16.6 cents in 1949.

Stake gill nets accounted for 67 percent of the production by weight; drift gill nets, 30 percent; and haul seines, the remaining 3 percent.

In 1950, the shad taken averaged 3.31 pounds per fish -- slightly smaller than the average of 3.49 pounds in the previous year. During 1948 the fish also averaged 3.31 pounds each.

Statistics of the operating units and catch of shad in the Hudson River for 1950 by New York and New Jersey fishermen are also included in the operating unit and catch data for the two states.

SECTION 4.- CHESAPEAKE FISHERIES

(Area XXIII)⁵

The 1950 catch of fish and shellfish in the Chesapeake Bay States (Maryland and Virginia) totaled 380,891,600 pounds valued at \$25,006,843 to the fishermen. This represented an increase of 46,235,100 pounds or 14 percent in quantity but a decrease of \$175,470 or 1 percent in value compared with the previous year. There were 18,305 fishermen operating in this area during 1950, compared with 18,346 in 1949.

During 1950 the commercial fisheries of the Chesapeake Bay States were marked by intensified activity with a good demand for certain products. Some scarcities developed but these helped bolster the prices of the less-desirable items. Fishermen felt, however, the squeeze of increased costs and unusually small catches of certain desirable species. Toward the end of the year, threats of a Third World War caused prices for a majority of items to rise to all-time highs.

In Virginia, the menhaden industry caught 25 percent more fish than it did the previous year. Oil prices, which had sagged to the lowest level in years, more than doubled under the threat of war. More plants added equipment for converting stickwater into marketable fish solubles.

Hard and soft crabs were caught in abundance, with many instances of dealers being unable to absorb more than an agreed-upon quantity of hard crabs.

Commercial licenses for catching finfish in Maryland remained fairly steady under the management plan adopted in 1942. In Virginia widespread disappointment over the runs of such formerly consistent fish as sea trout (weakfish) and croaker cut net-fishing licenses below the 1949 total. There were, however, abundant runs and correspondingly heavy catches of Boston mackerel in the ocean and alewines in the Bay. Alewife processors operated most of the season at capacity canning roe and salting a large volume of fish formerly canned. The demand for the canned form has dropped off considerably since the war.

With the opening of the fall oyster season, production and demand improved over the spring closing. Several setbacks were noted; the decimation of several important Rappahannock river beds early in the year by an unexplained mortality; interruption to normal shucking activity in several Virginia houses by an attempt at unionization, and, for Maryland, normally an avid user of Virginia seed oysters, the news that the commission of the latter state had banned export of seed oysters until further notice.

Abatement of pollution made its most notable strides in Virginia's Hampton Roads area, where the Health Department released extensive grounds for the resumption of oyster production. It had been held up there for several years because of the discharge of raw sewage from the bordering municipalities.

Although approximately the same number of ocean trawlers as in the previous year landed catches at Maryland and Virginia ports, the landings were frequently so small that shore workers were often idle. The mainstay was porgies and sea bass. They gave little evidence of diminishing as the croakers and sea trout had done. In fact, porgies dropped to a give-away price and sometimes spoiled before they could be sold.

⁵ This number has been assigned to this area by the North American Council of Fishery Investigations. It should be explained that there may be included under this area, craft whose principal fishing ports are in this area but at times fish elsewhere. Data on the operating units and catch of the fisheries of Maryland have been taken largely from statistics collected by the Maryland Department of Tidewater Fisheries. A portion of the data on the fisheries of Virginia have likewise been obtained from the Virginia Commission of Fisheries. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections.

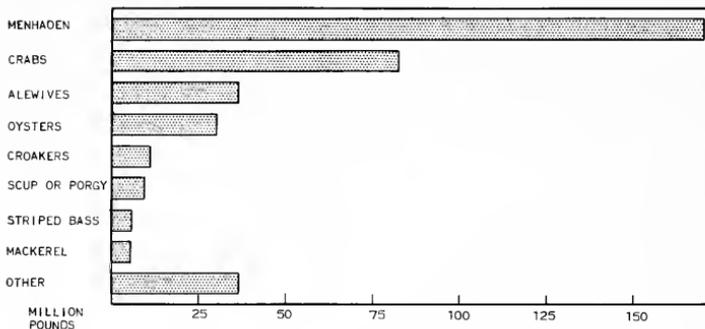

CHESAPEAKE FISHERIES

Administration of the fisheries in both states gained ground. The Virginia Commission established itself in new offices and a new laboratory, and added boats and men to its enforcement fleet. Maryland continued to enlarge its enforcement section and removed certain tax-collecting duties from inspectors in order to free them for additional patrol duty. The much-publicized Chesapeake Bay Authority proposal, designed to set up a bi-state group to administer bay fisheries, continued to meet the solid opposition of the Virginia fishermen, and at the end of the year had gained little or no ground.

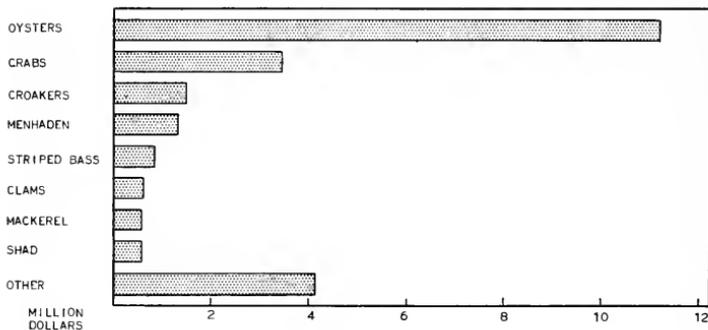

Increased staffs in the two state biological laboratories continued their respective projects. Among these are the blue crab study and the shad-spawning and survival investigations. The Chesapeake Bay Institute pursued its thorough-going examination of the chemical, physical and biological characteristics of the bay and its tributaries.

Condensed summary data of the catch by states of the Chesapeake Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 749.

- 1/ THIS ITEM IS USUALLY AN INTERMEDIATE PRODUCT, AND ALTHOUGH INCLUDED IN THE TOTAL, MAY BE SHOWN IN ITS FINAL STAGE OF PROCESSING IN THIS OR ANOTHER SECTION.
 - 2/ THIS ITEM HAS BEEN INCLUDED UNDER "UNCLASSIFIED PRODUCTS".
 - 3/ INCLUDES FRESH FILLETS OF BUTTERFISH, PORGY, SEA BASS, AND SEA TROUT; AND FRESH STEAKS OF SHARK, STRIPED BASS, AND SWELLFISH.
 - 4/ INCLUDES FROZEN FILLETS OF BUTTERFISH, SWELLFISH, AND UNCLASSIFIED SPECIES.
 - 5/ INCLUDES FRESH-SHUCKED CLAMS; AND FROZEN ALEWIFE ROE, CODFISH CAKES, SHAD ROE, BREADED OYSTERS, SHRIMP, AND BOBBED HARD CRABS.
 - 6/ INCLUDES FROZEN ALEWIFE ROE, SOFT BLUE CRABS, CLAM CHOWDER, AND BREADED OYSTERS.
 - 7/ INCLUDES CANNED ANCHOVY PASTE, MENHADEN, MACKEREL, MACKEREL ROE, TUNA, SHAD, SOFT SHELL BLUE CRABS, CRAB BISQUE, SHRIMP SOUP, CLAM AND OYSTER BISQUE, AND ANIMAL FOOD.
 - 8/ THIS ITEM IS INCLUDED WITH MISCELLANEOUS PRODUCTS AND BYPRODUCTS.
 - 9/ INCLUDES SALTED AND PICKLED ANCHOVIES; MACKEREL, SALMON, SEA HERRING, AND SEA HERRING ROE.
 - 10/ INCLUDES SALTED MACKEREL AND ALEWIFE ROE.
 - 11/ INCLUDES SMOKED BUTTERFISH, CARP, CHUBS, EELS, SABLEFISH, SALMON, SEA HERRING, STURGEON, AND WHITEFISH.
 - 12/ INCLUDES UNCLASSIFIED MEAL, DRY SCRAP, AND BODY OIL; OYSTER-SHELL POULTRY GRIT AND UNBURNED LIME; AND MARINE PEARL-SHELL BUTTONS.
 - 13/ INCLUDES UNCLASSIFIED MEAL, DRY SCRAP, AND BODY OIL; FISH SOLUBLES; PEARL ESSENCE; AND CANNED ANIMAL FOOD.
- NOTE:--SOME OF THE ABOVE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM RAW PRODUCTS IMPORTED FROM ANOTHER STATE OR FOREIGN COUNTRY; THEREFORE THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH WITHIN THE STATE.

1/ THE CATCH IN SOME OF THE EARLIER YEARS DOES NOT INCLUDE THAT IN DISTRICTS OTHER THAN THE CHESAPEAKE BAY, BUT THE ERROR RESULTING THEREFROM IS NEGLIGIBLE. 2/ INCLUDES HARVESTFISH FOR THE YEARS 1880 TO 1929, INCLUSIVE. 3/ DATA NOT AVAILABLE. 4/ INCLUDES SPOT. 5/ EXCLUSIVE OF THE CATCH IN THE JAMES AND POTOMAC RIVERS.

POTOMAC RIVER SHAD AND ALEWIFE FISHERY

The catch of shad in the Potomac River during 1950 amounted to 327,379 fish weighing 931,600 pounds, and valued at \$141,136 to the fishermen. The catch of alewives in the Potomac for the same year was 26,486,390 fish weighing 11,801,400 pounds, valued at \$177,868.

Compared with 1949, the catch of shad showed an increase of 2 percent in poundage and 4 percent in value. Alewives registered an increase of 4 percent in quantity but a decrease of 4 percent in value compared with the previous year.

A total of 690 fishermen were employed in this fishery, 64 less than the number who fished during the previous year.

Statistics on the yield and operating units of shad and alewives in the Potomac River are also included in the catch and operating unit data for Maryland and Virginia.

1/2 DATA FOR THE TWO STATES NOT ENUMERATED SEPARATELY.

SECTION 5.- SOUTH ATLANTIC FISHERIES

(Area XXIV)⁶

This section of the Digest contains information collected on the fisheries of the South Atlantic States (North Carolina, South Carolina, Georgia, and the East Coast of Florida) for 1950. This was the first complete general canvass of the fisheries of this area which has been made since 1940.

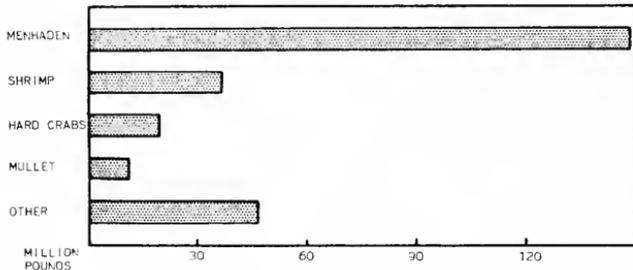

The catch of fish and shellfish in the South Atlantic Area during the calendar year of 1950 amounted to 260,881,400 pounds valued at \$18,943,779 to the fishermen. Menhaden landings totaled 147,125,000 pounds and comprised 56 percent of the total. Shrimp (36,481,500 pounds) accounted for 14 percent of the total catch.

The number of fishermen operating in the South Atlantic Area during 1950 totaled 13,519. There were 1,074 fishing vessels of 5 net tons and over and 5,892 under 5 net tons operating in this area during the year.

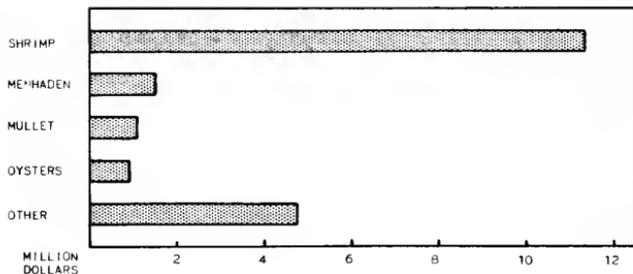

Condensed summary data of the operating units and catch by states of the South Atlantic Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 816. Information on the West Coast of Florida is included in the summary tables so that statistics on the State as a whole may be found in one place. Detailed data on the West Coast of Florida may be found in Section 6.

⁶ This number was assigned to this area by the North Atlantic Council on Fishery Investigations. The catch of fishery products in Lake Okeechobee is included in the Florida catch tables.

CATCH BY STATES, 1950

VALUE OF CATCH BY STATES, 1950

SECTION 6.- GULF FISHERIES

(Area XXV)⁷

The 1950 catch of fish and shellfish in the Gulf States Area (West Coast of Florida, Alabama, Mississippi, Louisiana, and Texas) amounted to 570,641,100 pounds valued at \$50,357,945 to the fishermen. The menhaden fishery totaled 326,030,100 pounds and comprised 57 percent of the total landings. Shrimp (151,752,800 pounds) accounted for 27 percent of the total catch.

Fleet expansion and the discovery of new fishing grounds characterized the more important trends in the fisheries of the Gulf Area during 1950. In this region, more than 300 fishing vessels of five net tons or greater received their first documentation. Continuing a trend which was initiated shortly after the close of World War II, these new vessels were larger, more powerful, better equipped, capable of cruising further from port, remaining longer at sea, and fishing in deeper waters than those built in previous years. Paced by a rapidly expanding fleet was the desire for fishery exploratory work looking to the development of latent resources and the expansion of existing fisheries. In this connection the Fish and Wildlife Service assigned the motor vessel Oregon to be used in exploratory and gear development research, and the motor vessel Alaska for biological and oceanographical research. The growth of industry-wide cooperation during the year was highlighted by the formation of an international trade association of Mexican and United States members, designed to promote quality in shrimp from producer to consumer.

The shrimp industry expanded considerably during 1950. This expansion was brought about by three developments in widely separated areas. The first occurred in late January off the coast of Florida near Dry Tortugas. Vessels operating in 10 to 25 fathoms of water discovered large concentrations of a grooved variety of shrimp, called "pink" shrimp in the industry. Best catches were made by night fishing, but lack of sounding equipment, coral formations, and the necessity of night fishing made operations hazardous. Loss of gear on the fishing grounds and damage to vessels in the small shallow harbors made the operations costly. However, vessels arrived daily from all over the South Atlantic and Gulf Area, taxing fully the harbor and supply facilities of the South Florida ports. Originally, landings were made only at Key West, but as the fleet expanded, vessels put in at Naples, Fort Myers, Tampa and Sarasota, Florida. By the end of 1950 it had been demonstrated that the fishery would be a normal one and West Florida ports expanded to care for the newly-acquired industry.

Hardly had the news of the Key West discovery quieted down when another important fishery was uncovered in an area just south of Pascagoula, Mississippi, in 17 to 23 fathoms of water. Unlike the Key West discovery, the Pascagoula fishery was of a mixed character with three commercial varieties, P. aztecus, P. duorarum, and P. setiferus comprising the catch. Brown shrimp, or P. aztecus made up the bulk of the catch, while the other two species contributed a small portion. Smaller shrimp made up a substantial portion of the catch. Canneries, normally idle at this time of the year, seized the opportunity to utilize the small sizes for canning. The larger shrimp were sent to the fresh and frozen markets. Producers dealing only in fresh or frozen headless shrimp found it difficult to market the small sizes thus reducing the value of the venture.

Simultaneously with the development of the Mississippi River Delta fishery, Texas craft operating in the International waters in the Gulf of Campeche, off the Yucatan Peninsula, discovered extensive grounds of P. duorarum. Brownsville, Texas, became the base of operations for trawlers fishing the new grounds. The fishing area was about 72 hours out of Brownsville and with three nights of fishing, a round trip required approximately nine days.

⁷ This number was assigned to this area by the North Atlantic Council on Fishery Investigations. The catch of the Mississippi River and Tributaries does not appear in this section but may be found in Section 9 of the Digest.

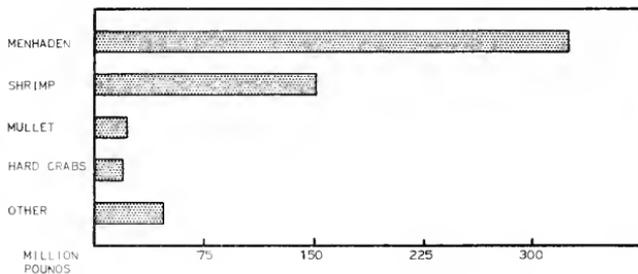

GULF FISHERIES

By late July 1950, shrimp were being produced around 1,500 miles of coastline from Key West, Florida, to Brownsville, Texas. Canneries put up substantial quantities of the catch but freezers also received their share. When the regular white shrimp season opened in the inside waters in August, the freezers had little space to provide for holding the commodity until it could be absorbed by the market. With freezer space unavailable, producers began to pour large quantities of fresh white shrimp on the market in the face of holders of substantial quantities of frozen brown shrimp. This resulted in an appreciable break in prices.

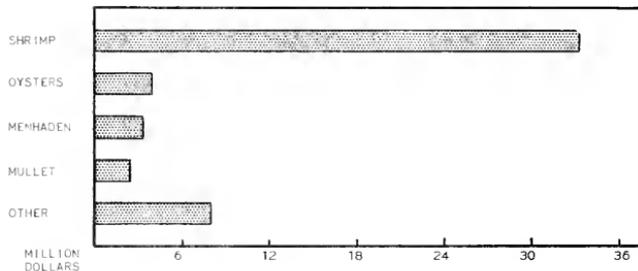

The fish reduction industry expanded greatly but suffered both from a declining market and a scarcity of fish. Four new plants began operations for the first time in 1950. Fish were particularly scarce in Mississippi Sound and Apalachicola, Florida, and were less plentiful at Cameron, Louisiana, and Port Arthur, Texas, than in previous years. Fish oils advanced from 4 to 19 cents per pound late in the season, but it was felt that this would not make up for the loss suffered from a decline in fish meal prices.

Condensed summary data of the operating units and catch by states of the fisheries of the Gulf Area appearing on the following pages, have been previously published in Current Fishery Statistics No. 817. Data on the catch and operating units of the East Coast of Florida and of the entire State of Florida are included in the Section on South Atlantic Fisheries.

TARPON SPRINGS SPONGE FISHERY

During 1950, the total value of transactions at the Tarpon Springs Sponge Exchange amounted to \$130,430. This represented about 22,000 pounds of sponges. Of this amount, approximately 90 percent was wool sponges and the remaining 10 percent yellow and grass sponges. In former years, additional detailed data have been published on this product. However, with the marked decrease in the production of sponges, complete records have not been available from the Exchange.

Additional information may be found on the production of sponges in the Florida State tables of this Section.

During 1950, the catch of fish and shellfish in the Pacific Coast States (Washington, Oregon and California) totaled 1,515,249,400 pounds valued at \$107,826,555 to the fishermen. This represented an increase of 11 percent in volume and 7 percent in value compared with the landings of the previous year. Pilchard landings, 714,521,800 pounds, were over 80 million pounds larger than the 1949 production but 52 percent below the peak catch in 1936. Tuna landings, 390,547,600 pounds, were over 58 million pounds greater than in 1949 and a new record. Salmon receipts, 63,725,000 pounds, decreased over 32 million pounds compared with the catch of the previous year.

For the sixth consecutive year the pack of tuna and tunalike fishes broke all records on the Pacific Coast. Tuna prices remained stable both for the raw fish and the canned product. The contract ex-vessel prices established in 1949 of \$310 per ton for yellowfin, \$300 for bluefin, \$290 for skipjack, \$195 for bonito, and \$185 for yellowtail continued for 1950. Prices paid to the fishermen for albacore averaged about \$400 per ton, or about the same as during the 1949 season. Price quotations for canned tuna remained fairly constant throughout the year with most of the pack selling at \$15 per case for light meat solid pack and \$13 per case for advertised brands of the new chunk style, while private labels brought about one dollar less. A significant development in the tuna industry was the accelerated trend toward the packing of more tuns in the chunk style, rather than the solid pack. During 1950, the chunk and flake packs accounted for roughly one-half of the entire California tuna pack, while in 1949 they made up approximately one-third of the pack. Due to the cancellation of the trade agreement with Mexico, the duty of canned tuna in oil was slated to rise from 22-1/2 percent to 45 percent on January 1, 1951. Imports of this product increased greatly as a result of efforts to enter as much canned tuna as desirable under the lower duty. Frozen tuna was also imported in record quantities.

The total Puget Sound salmon pack was generally satisfactory despite an off-cycle year for pink salmon and a disappointing pack of sockeyes. What otherwise would have been a mediocre pack was bolstered by heavy chum salmon imports from British Columbia and a Puget Sound chum salmon pack exceeded only three times in the history of the industry. Nearly two-thirds of the total Puget Sound pack consisted of chum salmon.

The 1950 sardine season in California was one of the few in recent years in which there were no costly tie-ups of the fishing fleet due to ex-vessel price disputes and negotiations so characteristic of several seasons since 1945. During the fall of 1949, the Southern California fleet lost over six weeks of the best part of the fishing season due to price disagreements. In 1950, an ex-vessel price of \$35 per ton was agreed upon before the beginning of the season in August and maintained until late in the season when the price was raised to \$45 per ton. Only two fishing nights were actually lost because of price disagreements. The 1950 California sardine pack set a new record of nearly 5.1 million cases. Only once before, in 1941, had this pack exceeded 5 million cases. This record pack was not a true indicator of the catch, however, as the percentage of fish used for reduction was much smaller than most years.

The Pacific halibut season in 1950 opened on May 1. Areas 1B and 2 were closed on June 1, two days earlier than in 1949, but fishing in these areas lasted as long as in 1948 (32 days). Areas 1A, 3, and 4 closed on July 5, considerably earlier than in 1949. The 1950 season for all these areas was the shortest on record -- 66 days compared with 73 days in 1949, 72 days in 1948, and 109 days in 1947. The chief reason advanced for the shorter halibut seasons in recent years is the increase in the number of vessels and fishermen in the halibut fleet.

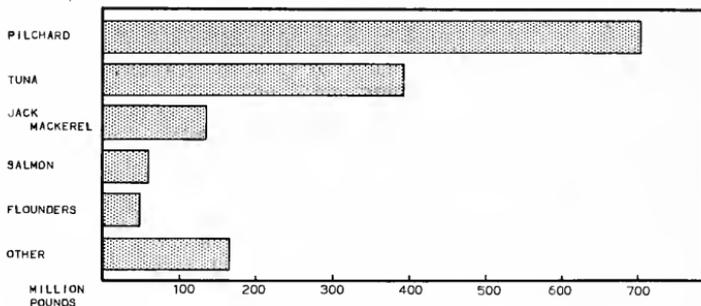

^B Data on the operating units and catch of the fisheries of the Pacific Coast States have been taken largely from statistics collected by the various State agencies. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections.

PACIFIC COAST STATES FISHERIES

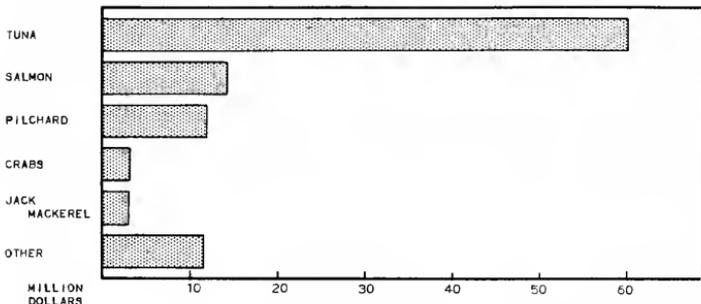

Imports of fishery products presented a situation with which some domestic producers were ill-fitted to cope, considering the ever-increasing prices for the raw product, materials, and labor in the canning industry. Imports of canned crab, canned tuna, frozen tuna, and vitamin-bearing oils were particularly in the public eye, with canned crab meat from the U. S. S. R. and frozen and canned tuna from Japan creating more general antagonism than the other fishery imports.

Condensed summary data of the operating units and catch by states of the Pacific Coast States Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 764.

SUMMARY OF OPERATING UNITS, 1950 - Continued

1/ INCLUDES HAUL SEINES OPERATED IN INLAND WATERS FOR CARP AND OTHER ROUGH FISH IN CALIFORNIA.
 2/ YELLOWFIN AND ALBACORE LINES ARE INCLUDED WITH "OTHER" IN WASHINGTON AND OREGON.
 3/ DATA FOR WASHINGTON AND OREGON INCLUDES ONLY VESSELS THAT TROLLED OR FISHED EXCLUSIVELY FOR TUNA AND DID NOT TROLL FOR SALMON. SOME OF THE SALMON TROLLERS ALSO TROLLED FOR TUNA.
 NOTE--STATISTICS ON THE OPERATION OF VESSELS ARE FOR CRAFT MAKING THEIR HOME PORT IN ONE OF THE DISTRICTS OF WASHINGTON, OREGON, OR CALIFORNIA, VESSELS AS WELL AS ALL TYPES OF GEAR OPERATED, HAVE BEEN INCLUDED IN THE DISTRICTS IN WHICH EACH VESSEL OPERATED EXCEPT THAT VESSELS OPERATING IN ALASKA ARE NOT INCLUDED ABOVE. THE TOTAL EXCLUSIVE OF DUPLICATION REPRESENTS THE TOTAL OPERATING UNITS IN THE PACIFIC COAST STATES, EXCLUSIVE OF THOSE IN ALASKA.

^{1/} INCLUDES THE CATCH TAKEN OFF LATIN AMERICA.

^{2/} CATCH OF GRAYFISH IN CALIFORNIA IS INCLUDED WITH SHARKS.

^{3/} ROCK CRABS ARE INCLUDED WITH DUNGNESS CRABS.

NOTE:--PRIOR TO 1941, THE POUNDAGE OF MOST OF THE HALIBUT, SABLEFISH, AND ROCKFISH FOR WASHINGTON AND OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941, ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. LANDINGS OF LINGCOD, SABLEFISH AND ROCKFISHES, WHICH WERE DRESSED BEFORE WEIGHING, WERE CONVERTED TO ROUND WEIGHT BY MULTIPLYING THE DRESSED WEIGHT BY A FACTOR OF 1.43. THE FACTOR USED TO CONVERT HALIBUT FROM MARKETED WEIGHT WAS 1.33. THE POUNDAGE AND VALUE OF THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDES 909,658 POUNDS OF FISH LIVERS AND VISCERA, VALUED AT \$403,106 TO THE FISHERMEN. COMPRISING THIS TOTAL WERE: GRAYFISH LIVERS, 296,820 POUNDS, \$46,209; HALIBUT LIVERS, 163,973 POUNDS, \$66,658; LINGCOD LIVERS, 120,164 POUNDS, \$126,697; ROCKFISH LIVERS, 11743 POUNDS, \$5,680; SABLEFISH LIVERS, 79,435 POUNDS, \$40,643; SKATE LIVERS, 692 POUNDS, \$48; SOUPFIN SHARK LIVERS, 34,954 POUNDS, \$92,080; OTHER SHARK LIVERS, 5,684 POUNDS, \$200; MISCELLANEOUS FISH LIVERS, 4,043 POUNDS, \$202; AND HALIBUT, SABLEFISH AND LINGCOD VISCERA, 192,250 POUNDS, \$24,289. SIMILAR DATA FOR CALIFORNIA ARE NOT AVAILABLE. LANDINGS OF GRAYFISH AND SHARKS ARE BASED ON A LIVER YIELD OF 12 PERCENT OF THE ROUND WEIGHT, SINCE MOST OF THE CARCASSES OF THESE SPECIES WERE DISCARDED AT SEA AFTER REMOVAL OF THE LIVERS. A PORTION OF THE TUNA CATCH TAKEN OFF LATIN AMERICA BY UNITED STATES FISHERMEN, WHICH IS INCLUDED IN THIS TABLE, MAY ALSO BE INCLUDED IN U.S. IMPORT STATISTICS.

- 1/ THE SALMON CAUGHT BY HAUL SEINES WERE TAKEN ONLY BY INDIANS ON RESERVATIONS.
- 2/ FISHED ONLY ON INDIAN RESERVATIONS.
- 3/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.
- 4/ THE WEIGHT OF CRABS SHOWN IS BASED ON AN AVERAGE OF 22 POUNDS PER DOZEN.
- 5/ THE STATISTICS ON HARD CLAMS ARE BASED ON YIELDS OF 25 PERCENT OF EDIBLE MEAT.
- 6/ THE STATISTICS ON OYSTERS ARE BASED ON 18 PERCENT EDIBLE MEATS FOR WESTERN OYSTERS AND 10 PERCENT FOR PACIFIC OYSTERS.
- 7/ THE WEIGHTS OF BAY SCALLOPS ARE BASED ON 8.5 POUNDS PER GALLON WHEN SHUCKED.

NOTE:--THE QUANTITIES SHOWN REPRESENT THE ROUND WEIGHT OF THE CATCH OF FISH AND SHELLFISH EXCEPT FOR BIVALVE MOLLUSKS, WHICH ARE REPORTED IN POUNDS OF MEATS. THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS OF LIVERS AND VISCERA: GRAYFISH LIVERS, 210,798 POUNDS, VALUE \$31,619; HALIBUT LIVERS, 154,464 POUNDS, VALUE \$63,350; LINGCOD LIVERS, 107,100 POUNDS, VALUE \$119,952; ROCKFISH LIVERS, 10,800 POUNDS, VALUE \$5,616; SABLEFISH LIVERS, 76,673 POUNDS, VALUE \$39,670; SOUFFIN SHARK LIVERS, 15,060 POUNDS, VALUE \$37,650. UNCLASSIFIED LIVERS, 4,043 POUNDS, VALUE \$202; AND HALIBUT AND SABLEFISH VISCERA, 187,380 POUNDS, VALUE \$23,559.

- 1/ FISHERY ONLY ON INDIAN RESERVATIONS.
- 2/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.
- 3/ THE WEIGHT OF CRABS SHOWN ABOVE IS BASED ON A WEIGHT OF 24 POUNDS PER DOZEN.
- 4/ THE WEIGHT OF RAZOR CLAMS IS BASED ON A YIELD OF 42 PERCENT OF EDIBLE MEAT.
- 5/ THE STATISTICS ON OYSTERS USED IN THIS TABLE ARE BASED ON YIELDS OF 12 PERCENT EDIBLE MEATS.

NOTE:--THE QUANTITIES SHOWN REPRESENT THE ROUND WEIGHT OF THE CATCH OF FISH AND SHELLFISH EXCEPT FOR BIVALVE MOLLUSKS, WHICH ARE REPORTED IN POUNDS OF MEATS. THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS OF LIVERS AND VISCERA: GRAYFISH LIVERS, 1,646 POUNDS, VALUE \$247; LINGCOD LIVERS, 318 POUNDS, VALUE \$318; AND SOUFPIN SHARK LIVERS, 12 POUNDS, VALUE \$30.

TOTAL	40,428,100	5,049,040	17,827,700	2,101,912

1/ THE CATCH OF BLUEFIN, SKIPJACK AND YELLOWFIN TUNA WAS TAKEN OFF LATIN AMERICA.
 NOTE:--PRIOR TO 1941, THE POUNDAGE OF MOST OF THE HALIBUT, SABLEFISH AND ROCKFISH FOR WASHINGTON AND OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941, ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. LANDINGS OF LINGCOD, SABLEFISH AND ROCKFISHES, WHICH WERE DRESSED BEFORE WEIGHING, WERE CONVERTED TO ROUND WEIGHT BY MULTIPLYING THE DRESSED WEIGHT BY A FACTOR OF 1.43. THE FACTOR USED TO CONVERT HALIBUT FROM MARKET WEIGHT WAS 1.33. THE POUNDAGE AND VALUE OF THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDES 909,659 POUNDS OF FISH LIVERS AND VISCERA, VALUED AT \$403,106 TO FISHERMEN. COMPRISING THIS TOTAL WERE: GRAYFISH LIVERS, 296,820 POUNDS, \$46,209; HALIBUT LIVERS, 163,973 POUNDS, \$65,656; LINGCOD LIVERS, 120,164 POUNDS, \$126,697; ROCKFISH LIVERS, 11,743 POUNDS, \$5,880; SABLEFISH LIVERS, 79,435 POUNDS, \$40,643; SKATE LIVERS, 692 POUNDS, \$48; SOUFFIN SHARK LIVERS, 34,854 POUNDS, \$92,080; OTHER SHARK LIVERS, 5,684 POUNDS, \$200; MISCELLANEOUS FISH LIVERS, 4,043 POUNDS, \$202; AND HALIBUT, SABLEFISH, AND LINGCOD VISCERA, 192,250 POUNDS, \$24,269. SIMILAR DATA FOR CALIFORNIA ARE NOT AVAILABLE. LANDINGS OF GRAYFISH AND SHARKS ARE BASED ON A LIVER YIELD OF 12 PERCENT OF THE ROUND WEIGHT, SINCE MOST OF THE CARCASSES OF THESE SPECIES WERE DISCARDED AT SEA AFTER REMOVAL OF THE LIVERS. A PORTION OF THE TUNA CATCH TAKEN OFF LATIN AMERICA BY UNITED STATES FISHERMEN, WHICH IS INCLUDED IN THIS TABLE, MAY ALSO BE INCLUDED IN U.S. IMPORT STATISTICS.

- 1/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED.
- 2/ THE WEIGHT OF CRABS SHOWN IS BASED ON AN AVERAGE OF 25 POUNDS PER DOZEN.
- 3/ THE WEIGHT OF RAZOR CLAMS IS THAT OF EDIBLE MEATS, BASED ON A YIELD OF 42 PERCENT OF THE ROUND WEIGHT.
- 4/ MIXED CLAMS CONSIST PRINCIPALLY OF EASTERN SOFT SHELL CLAMS. THE WEIGHT SHOWN IS THAT OF EDIBLE MEATS, BASED ON A YIELD OF 21 PERCENT OF THE ROUND WEIGHT
- 5/ THE STATISTICS ON OYSTERS USED IN THIS TABLE ARE BASED ON A YIELD OF 12 PERCENT OF EDIBLE MEATS.

NOTE:--THE QUANTITIES SHOWN REPRESENT THE ROUND WEIGHT OF THE CATCH OF FISH AND SHELLFISH, EXCEPT FOR BIVALVE MOLLUSKS, WHICH ARE REPORTED IN POUNDS OF MEATS. THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS OF LIVERS AND VISCERA: HALIBUT LIVERS, 2,849 POUNDS, VALUE \$997; LINGCOD LIVERS, 2,895 POUNDS, VALUE \$1,505; ROCKFISH LIVERS, 67 POUNDS, VALUE \$19; SABLEFISH LIVERS, 802 POUNDS, VALUE \$224; GRAYFISH LIVERS, 3,026 POUNDS, VALUE \$514; AND SOUFFIN SHARK LIVERS, 5,976 POUNDS, VALUE \$16,434.

LANDINGS BY HALIBUT FLEET AT SEATTLE, WASH.

During 1950, landings of halibut, lingcod, rockfishes, and sablefish at Seattle, Washington, by the United States halibut fleet amounted to 9,289,486 pounds, valued at \$2,204,577 to the fishermen. In addition, a total of 629,357 pounds of assorted fish livers and viscera, valued at \$160,843 was landed by these vessels. The combined landings were 20 percent less in volume and 9 percent less in value compared with the landings during 1949.

A summary of 1950 landings at Seattle by the United States halibut fleet is contained below. The landings represent the dressed weight of the catch and are not directly comparable with data contained in the sectional and State catch tables. For additional information on the Pacific Coast halibut fishery, the reader is referred to Section 12 of this Digest entitled "Review of Certain Major Fisheries."

PACIFIC COAST STATES FISHERIES

CATCH OF CERTAIN SPECIES BY STATES, 1892 - 1950 - Continued
(EXPRESSED IN THOUSANDS OF POUNDS)

- 3/ INCLUDES SOLE.
 4/ INCLUDES HALIBUT.
 5/ INCLUDED IN SHARK DATA BEGINNING WITH 1938.
 6/ IN THIS YEAR ALL SALMON WERE INCLUDED UNDER CHINOOK.
 7/ INCLUDES FRESH COD AND LINGCOD.
 8/ MAY INCLUDE SOME SILVER SALMON.
 9/ WHITE SEA BASS INCLUDED WITH BLACK SEA BASS.
 10/ INCLUDES GRAYFISH BEGINNING WITH 1938.
 11/ INCLUDES SHELLS.
 12/ DRIED.
 13/ IN THIS YEAR ALL CLAMS WERE LISTED UNDER CLAMS, HARD.
 14/ CONSISTED MOSTLY OF SOFT CLAMS.
 15/ ALL OYSTERS WERE LISTED UNDER OYSTERS, EASTERN.
 16/ ALL OYSTERS WERE LISTED UNDER OYSTERS, WESTERN.
 17/ SPERM OIL INCLUDED WITH WHALE OIL.

PACIFIC COAST STATES CATCH, 1937 - 1950

During 1950 the commercial catch of fish and shellfish in the Great Lakes and the International Lakes of Northern Minnesota amounted to 70,882,100 pounds, valued at \$10,845,756 to the fishermen. This represented a decrease of 17 percent in quantity and 5 percent in value compared with the previous year. In addition, the Canadian catch in these lakes amounted to 25,162,500 pounds. Lake Erie was again the leading producer, with United States fishermen taking 23,981,600 pounds and Canadian fishermen 16,866,100 pounds. Lake Michigan was again second in production with 27,076,600 pounds, the entire amount being taken by United States fishermen.

This was the first year since 1940 that operating unit information has been collected in this area. During that year there were 5,142 men employed in the fisheries of the Great Lakes as compared with 4,841 during 1950. This represented a decrease of 301 fishermen during the ten-year period. It is believed, however, that this figure has fluctuated considerably during the past decade. Vessels of 5 net tons or over rose from 499 in 1940 to 661 in 1950, while smaller craft advanced from 1,785 to 1,810 during this same ten-year period.

Demand was good throughout the year for most fishery items, but slumps of short intervals did develop for some less popular species. Prices, generally, did not fluctuate greatly during the year, but an increased demand for lake trout at times did boost prices sharply for this item. At one time during the year, the fishermen's price for lake trout reached to 79¢ per pound, the highest price ever reported for this fish. The catch of lake trout, however, continued to decrease and in 1950 was 3,255,600 pounds, the smallest since 1913 when continuous records first became available. The consistent decrease in lake trout production is believed to have been caused in part by the sea lamprey in the Great Lakes. Extensive studies and practices on methods of lamprey control were continued by the United States Fish and Wildlife Service in the Great Lakes during 1950. Substantial sums of money were allotted by the federal government in an attempt to curb this predator. During 1950, electrical devices located in tributary streams were found to be unusually efficient in stopping the movements of the lamprey to and from the spawning grounds.

One of the outstanding developments during the year was the widespread use of nylon netting. The demand was so great, in many cases, that fishermen were forced to wait until new supplies were available. It was found in the Great Lakes that the nylon nets were far more desirable for winter fishing, probably because of the resilient qualities of the webbing. Winter-fishing operations were carried on through the ice during the entire winter. Ice fishing, during the winter of 1950, was unusually profitable, and the catches with the new nylon netting were above the expectations of the fishermen with much less work for the net handlers.

The Chicago Market News Service, of the Branch of Commercial Fisheries, reported several outstanding developments in the Chicago area during 1950. Among the more important fresh-water species, lake trout and whitefish receipts were below the 1949 arrivals. Lake trout recorded a decline of 28 percent while whitefish arrivals were 5 percent below the previous year. Lake trout arrivals from Canadian sources in 1949 were 73 percent greater than in 1948, while the receipts from Canada during 1950, were 32 percent below 1949, with arrivals from domestic sources showing a decline of 24 percent. Receipts of domestic whitefish were 18 percent below 1949, with those from Canadian sources exceeding the 1949 figure by 4 percent.

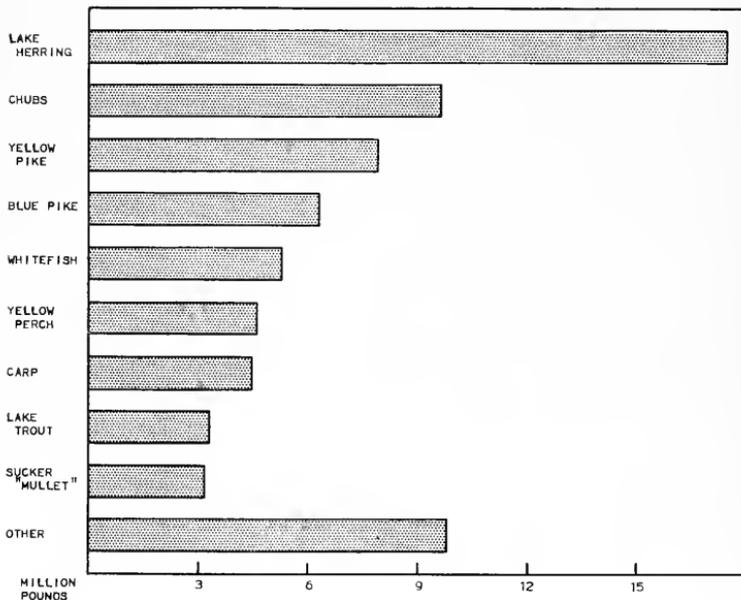

⁹ *The statistics of the catch were obtained principally from records of the various state agencies and from the Dominion Bureau of Statistics, Ottawa, Canada. Part of the operating unit data were also obtained from the various state agencies. Supplemental surveys were conducted by Service personnel to obtain the balance of the information.*

The volume of fresh and frozen fishery products received in the Chicago area during the year was 5 percent greater than in 1949. This was due largely to increased shipments from distant points. The 5 percent decline in receipts of fresh-water fish, was due mainly to fewer arrivals from local production areas, and, in some measure, to less than normal yields from domestic fresh-water fishing areas.

The strides made in the development of consumer interest in frozen packaged fishery products was one of the outstanding features of the year with specialized products continuing to gain recognition. This was evidenced in the growing popularity of many breaded marine fish and shellfish items, such as fillets, shrimp, oysters, and scallops, in this area.

The following tables contain a summary of the United States and Canadian catch in the Great Lakes and International Lakes of Northern Minnesota as well as detailed data on the catch by gear. Condensed summary data on the catch by states and lakes and operating units by states of the Lake Fisheries have been previously published in Current Fishery Statistics No. 815. Additional historical data on the fisheries of the Great Lakes may be found in the Report of the International Board of Inquiry for the Great Lakes.

CATCH OF FISHERY PRODUCTS IN THE GREAT LAKES AREA, 1950.

1/ DATA NOT AVAILABLE.
2/ LESS THAN 500 POUNDS.

NOTE:--DATA ON THE INTERNATIONAL LAKES OF MINNESOTA INCLUDE ONLY THE CATCH FROM LAKE OF WOODS PRIOR TO 1926. THE DATA IN THIS TABLE WERE TAKEN FROM THE REPORT OF THE INTERNATIONAL BOARD OF INQUIRY FOR THE GREAT LAKES FISHERIES AND FROM THE ANNUAL STATISTICAL PUBLICATIONS OF THE FISH AND WILDLIFE SERVICE. IN SOME YEARS, SMALL QUANTITIES OF RELATED SPECIES MAY HAVE BEEN INCLUDED IN THE DATA.

SECTION 9.- MISSISSIPPI RIVER FISHERIES

The canvass of the fisheries of the Mississippi River and its tributaries for 1950 conducted by the Branch of Commercial Fisheries of the Fish and Wildlife Service is the first complete survey of the fisheries of this area since 1931.

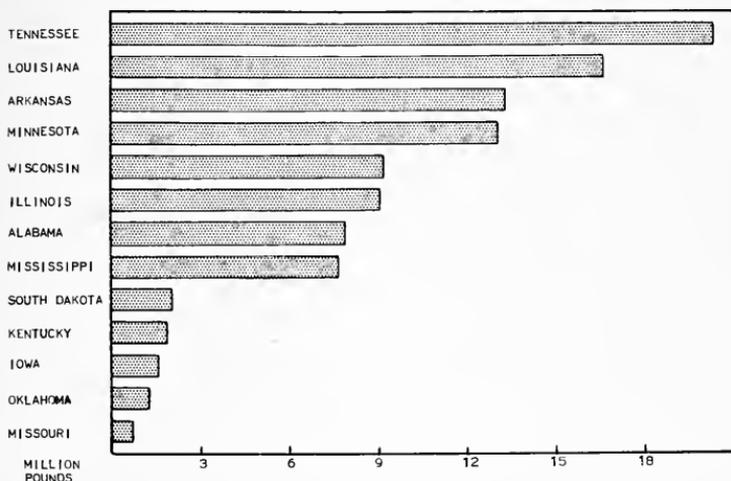

Landings of fishery products in the Mississippi River and its tributaries during 1950 amounted to 105,795,800 pounds valued at \$10,104,129 to the fishermen. This represented an increase of 28 percent in quantity and 249 percent in value compared with the landings of 1931. Rough fish (carp, buffalofish, bullheads, garfish, and quillback) taken as a result of lake and stream management programs have been included in these data. Although these fish in many cases were not taken by commercial fishermen, they were marketed through commercial channels. Rough fish made up a majority of the catch in some states. Another noticeable trend in the fisheries of this area was the marked decrease in the production of mussel shells used for buttons. In 1931, over 37 million pounds of this product was harvested. Only 23 million pounds were reported during 1950. Increased usage of cheaper synthetic buttons has probably contributed greatly to the decline of this fishery. During 1950, there were 19,197 fishermen employed in the fisheries of the Mississippi River and its tributaries, compared with 15,884 in 1931.

Tennessee led all other states in production with 20,528,600 pounds of fishery products valued at \$1,428,600 to the fishermen. Louisiana was in second place followed by Arkansas.

Funds have been available for only seven surveys of the fisheries of the Mississippi River and its tributaries. The former United States Fish Commission and the Bureau of Fisheries conducted surveys to obtain data for the years 1894, 1899, 1903, 1922, and 1931. The Bureau of the Census collected information in 1908. Detailed data on the fisheries of the Mississippi River and its tributaries for the year 1931, are contained in "Fishery Industries of the United States, 1932," which is published in Appendix III to Report of the Commissioner of Fisheries the fiscal year 1933. Data for previous years in which surveys were conducted are contained in the Reports of the Commissioner of Fisheries, in special statistical bulletins, and in Bureau of the Census special report "Fisheries of the United States, 1908".

Condensed summary data of the operating units and catch by states of the Mississippi River Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 840. In all catch by waters tables, the landings from the smaller streams are credited to the major stream into which they empty.

NOTE:-THE TOTAL FOR 1908 AS PREVIOUSLY PUBLISHED IN FISHERIES OF THE UNITED STATES 1908 WAS 148,311,000 POUNDS VALUED AT \$3,125,000. HOWEVER, THE TOTAL OF THE INDIVIDUAL TABLES AS PUBLISHED IN THAT DOCUMENT IS AS SHOWN ABOVE AND DOES NOT EQUAL THE TOTAL LISTED IN PREVIOUS SUMMARIES.

SECTION 10.- ALASKA FISHERIES¹⁰

During 1950, the commercial catch of fishery products in Alaska totaled 482,292,622 pounds, valued at \$31,371,626. This represented an increase of 2 percent in quantity but a decrease of 20 percent in value compared with 1949.

The 1950 season in Alaska produced 264,918,844 pounds of salmon with a value of \$22,637,117. This was a decrease of 123,426,316 pounds or 32 percent in quantity and \$10,025,380 or 31 percent in value compared with the salmon receipts during 1949. The marked decrease in the salmon catch during 1950 was primarily due to the 138 million pound drop in the catch of pink salmon in Southeastern Alaska. The 1949 production of pinks in this area reached 175.7 million pounds and was the largest yearly production since 1941 when over 240 million pounds were landed.

During 1950, there were 124 plants canning fish and shellfish in Alaska, one less than in 1949. Employment in the Alaskan fisheries during 1950, was given to 27,544 persons, as compared with 28,603 in 1949. The majority of these employees were engaged in the salmon canning industry, while others worked in the canned shellfish, fresh, frozen, cured, and byproducts industries. These industries have become so interrelated in recent years that a detailed employment segregation by industries would be most difficult.

The total pack of canned salmon was 3,307,985 cases, valued at \$82,354,118. This was a decrease of 25 percent in quantity but an increase of 1 percent in value compared with the production in 1949 when 4,391,996 cases, valued at \$81,263,171 were packed. The quantity of red salmon frozen in Bristol Bay for canning on Puget Sound showed a marked increase.

During 1950, the herring quota was raised in the Kodiak area from 250,000 barrels to 275,000 barrels; the Prince William Sound area was raised from 150,000 barrels to 275,000 barrels; while the Southeastern area was cut during 1950 from 200,000 barrels to 150,000 barrels. A barrel of herring weighs 250 pounds. The catch of herring in Alaska during 1950 totaled 165,366,843 pounds. This represented an increase of 132,305,671 pounds or 392 percent compared with the 1949 season.

Early in 1950, the Branch of Fishery Biology of the Fish and Wildlife Service, realigned its research program in Alaska to concentrate on problems of conserving the pink salmon fishery in Southeastern Alaska. However, in order to maintain continuous series of information, spawning ground surveys and age-class sampling were carried on in the Karluk River and Bristol Bay sockeye salmon fisheries, and in the Kodiak, Prince William Sound and Southeastern Alaska herring fisheries.

Studies of pink salmon in Alaska revealed a close association between thermal units during the incubation period, time of downstream migration, and survival rate. In addition to tagging and fin clipping of pink salmon to determine their migratory paths, efforts were made to determine plankton food utilization and its abundance, growth rates, and other variables which may affect marine survival of pink salmon.

A pilot experiment was carried out in a small lake near Karluk Lake to obtain a preliminary appraisal of the value of fertilization. A great increase in the growth of microscopic plants in the lake occurred, however, sufficient time has not elapsed to evaluate the results in terms of salmon production.

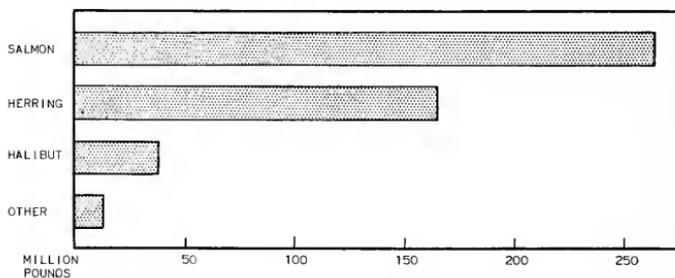

During 1950, the exploratory fishing vessel John N. Cobb, of the Branch of Commercial Fisheries, made shellfish surveys in the region near Ketchikan, and in the waters adjacent to Baranof and Chichagof Islands. The spring and fall cruises were made for the purpose of establishing, if possible, off-season fisheries in these areas. Traps, otter trawl and dredges were used in the spring operations while the fall survey employed otter trawls, beam trawls, scallop dredges, crab pots and shrimp traps.

¹⁰ Statistics on the fisheries of Alaska are collected and compiled by the Alaska Branch of the Service.

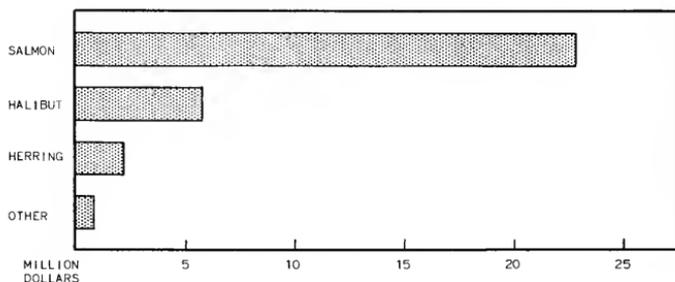

ALASKA FISHERIES

Results indicated that the Claude Point area in upper Behm Canal, Carroll Inlet, and Hassler Pass, near Ketchikan, could possibly support a small-scale beam trawl operation for shrimp; that pink shrimp could be taken in commercial quantities with a beam trawl in Katlian and Fish Bays, although the dragging areas were limited; and that further investigation could possibly lead to a commercial trap fishery for spot and coon-stripe shrimp which apparently had widespread distribution in waters where trawling was difficult.

SECTION 11.- HAWAII

The following tabulation of the catch of fish and shellfish in the Territory of Hawaii has been compiled from monthly reports submitted by the Board of Commissioners of Agriculture and Forestry of the Territory of Hawaii, Division of Fish and Game. The catch listed has not been included in the tabulations of the catch of the United States and Alaska listed in the sections entitled "General Review" or "Review of Certain Major Fisheries".

The commercial catch of fishery products in the Hawaiian Islands during 1950 totaled 15,917,369 pounds valued at \$3,508,272. This represented an increase of 6 percent in quantity but a decrease of 6 percent in value compared with the landings of the previous year.

1/ SALT-WATER.

SECTION 12.- REVIEW OF CERTAIN MAJOR FISHERIES

There are presented in this section of the Digest complete data on the catch of certain of the major species of fish and shellfish taken commercially in the United States and Alaska. Although these data are included in the detailed catch tables for the various states, they have been republished in individual fishery tables in this portion of the report to provide readers with a single source of catch data for cod, haddock, halibut, mackerel, menhaden, ocean perch (rosefish), pilchard, salmon, tuna, oysters and shrimp. Most of the above species are taken by fishermen operating in several states or districts, and a number are taken by several types of fishing gear. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data on the catch of the species in individual state catch tables. The information contained in this section includes the volume and value of the catch by individual types of gear and by states and districts.

UNITED STATES AND ALASKA COD FISHERY

During 1950, the fishermen of the United States and Alaska caught 65,436,318 pounds of cod valued at \$3,918,008 to the fishermen. This was a decrease of 8 percent in quantity and 3 percent in value compared with the previous year.

Otter trawls accounted for 78 percent of the cod catch; lines, 18 percent; and gill nets, 4 percent. Other types of gear, principally floating traps and pound nets made up less than 1 percent.

Massachusetts, with a catch of 45.9 million pounds of cod, led in the production of this species, followed by Washington, (7.0 million pounds), and Maine, (6.6 million pounds).

In all areas, except Alaska, the major portion of the catch was taken with otter trawls. Lines accounted for the entire Alaska catch.

ATLANTIC COAST HADDOCK FISHERY

The production of haddock in the United States during 1950 amounted to 158,558,700 pounds, valued at \$11,833,861 to the fishermen. This was an increase of 17 percent in quantity and 28 percent in value compared with the previous year. The increase in the catch of scrod haddock continued during 1950.

Otter trawls accounted for 96 percent of the total production. The remaining 4 percent was taken with hand and trawl lines, gill nets and pound nets.

Of the total catch, 99 percent was landed in the New England States. The remaining 1 percent was taken in New York and New Jersey. Massachusetts accounted for 95 percent of the total landings.

PACIFIC COAST HALIBUT FISHERY

The total North Pacific halibut catch by both United States and Canadian craft during 1950 totaled 55,138,000 pounds, an increase of 3 percent compared with the previous year.

The 1950 halibut season was the shortest on record -- 66 days compared with 73 days in 1949, 72 days in 1948, and 109 days in 1947. The chief reason advanced for the shorter halibut seasons in recent years is the addition of fishing vessels and fishermen to the halibut fleet with the resultant increase in fishing intensity.

For two years preceding 1950, the landings of fresh halibut at Seattle by vessels of the regular halibut fleet were showing a definite increase over landings of the several preceding years. However, the 1950 vessel landings at that city recorded a decline of 19 percent from 1949, emphasizing the reluctance of fishing vessels to make the long trip from the fishing grounds to Seattle. An increasing number of cold-storage installations at various ports in Alaska indicated that the operators of these plants felt that the halibut vessels would continue to seek ports closer to the fishing areas.

Data on landings of halibut listed in the following tables represent the dressed weight of the fish, which is the weight upon which the quota is based, while those in the various state and sectional tables represent the round weight of the catch. In the sectional tables, halibut landed in Canada by vessels of United States registry is credited to Alaska. The dressed weight can be converted to round weight by multiplying by 1.33.

NOTE:--IN ADDITION TO THE ABOVE, THERE WERE 1,290,229 POUNDS OF HALIBUT VALUED AT \$335,450 LANDED AT OTHER WASHINGTON PORTS. A TOTAL OF 791,435 POUNDS OF HALIBUT, SABLEFISH, LINGCOD, ROCKFISH, GRAYFISH (DOG FISH), AND MISCELLANEOUS SHARK LIVERS, VALUED AT \$349,474 WERE LANDED BY THE UNITED STATES HALIBUT FLEET AT PACIFIC COAST PORTS DURING 1950. THESE VESSELS ALSO LANDED 875,000 POUNDS OF HALIBUT AND SABLEFISH VISCERA VALUED AT \$99,675. VESSELS OF THE CANADIAN FLEET LANDED A TOTAL OF 18,773,643 POUNDS OF HALIBUT, VALUED AT \$4,458,830, OF WHICH 69,457 POUNDS, VALUED AT \$15,360 WERE LANDED AT ALASKA PORTS.

STATISTICS IN THE ABOVE TABLES ARE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL FISHERIES COMMISSION FOR WASHINGTON AND BRITISH COLUMBIA, AND BY THE FISH AND WILDLIFE SERVICE FOR ALASKA. THIS TABULATION DOES NOT INCLUDE LANDINGS AT PORTS SOUTH OF SEATTLE, WASHINGTON, WHICH AMOUNTED TO ONLY 1.3 PERCENT OF THE TOTAL PACIFIC COAST CATCH.

ATLANTIC COAST MACKEREL FISHERY

During 1950, the mackerel catch on the Atlantic Coast amounted to 22,094,500 pounds, valued at \$2,058,129 to the fishermen. This represented a decrease of 47 percent in quantity but only 11 percent in value compared with the previous year. The greatest decrease occurred in the catch of mackerel taken in purse seines in New Jersey. In 1949, there were almost 17 million pounds of mackerel taken in purse seines in this state; in 1950, slightly over one-quarter million pounds were taken there by this gear. Purse seines did, however, contribute 39 percent of the total Atlantic Coast mackerel catch. The pound net catch decreased from 6.6 million pounds in 1949 to 2.9 million pounds in 1950. Unusually heavy storms in the Middle Atlantic Area both in the spring and in the fall were mainly responsible for the marked decrease in the catch of mackerel in 1950.

The New England Area accounted for 65 percent of the 1950 mackerel catch, while the Chesapeake Area and the Middle Atlantic Area contributed 26 and 9 percent respectively. The production in the South Atlantic Region was less than 1 percent.

PACIFIC COAST MACKEREL FISHERY

The catch of Pacific mackerel during 1950 amounted to 32,650,000 pounds valued at \$794,479 to the fishermen. This represented a decrease of 34 percent in quantity and 38 percent in value compared with the previous year. Prices paid to fishermen remained steady at approximately \$50 per ton throughout the year, with no tie-ups due to price disputes.

The entire Pacific mackerel catch was taken in California. The San Pedro District accounted for 94 percent of the 1950 catch with the Santa Barbara District contributing 3 percent; the San Diego District, 2 percent; and the Monterey and San Francisco Districts contributing the remaining 1 percent.

Mackerel taken by seines and lampara nets accounted for 57 percent of the 1950 catch while brail and scoop nets caught 42 percent. The remaining 1 percent was taken with lines and gill and trammel nets.

ATLANTIC AND GULF COAST MENHADEN FISHERY

The catch of menhaden during 1950 totaled 1,026,317,600 pounds, valued at \$10,402,294. This represents a decrease of 5 percent in volume and 10 percent in value compared with the landings of the previous year. Practically the entire menhaden production was used in the manufacture of oil and meal, with only small quantities being used for bait.

The value of manufactured menhaden products, excluding menhaden solubles, during 1950 totaled \$18,731,305. Dry scrap and meal, including a small amount of acidulated scrap, with a value of \$12,864,751 accounted for 69 percent of the total value, while menhaden oil, valued at \$5,866,554, made up the remaining 31 percent. There were 36 plants which process menhaden during 1950. During 1949, 31 plants manufactured menhaden products.

MENHADEN VESSEL APPROACHING REDUCTION PLANT

OCEAN PERCH FISHERY

During 1950, the catch of ocean perch (rosefish) totaled 207,793,000 pounds valued at \$9,137,318 to the fishermen. This represented a decrease of 12 percent in quantity and 7 percent in value compared with the landings of the previous year. Sixty-two percent of the 1950 catch was landed at Massachusetts ports, and the remaining 38 percent was landed in Maine, principally Portland and Rockland. Gloucester accounted for 94 percent of the poundage landed in Massachusetts. A wage disagreement between seafood plant workers and plant operators during the summer was partially responsible for the decline in ocean perch (rosefish) landings.

The entire ocean perch (rosefish) catch is used for producing fillets, most of which are frozen. Waste from filleting is used in the manufacture of meal and oil.

PACIFIC COAST PILCHARD FISHERY

In 1950, the catch of pilchards amounted to 714,521,800 pounds valued at \$12,140,322 to the fishermen. This represented an increase in both quantity and value of 13 percent compared with the landings of the previous year.

The 1950 sardine season was one of the few in recent years in which there were no costly tie-ups of the fishing fleet due to ex-vessel price disputes and negotiations. During the previous year, the Southern California pilchard fleet lost over six weeks of the best part of the fishing season due to price disagreements. In 1950, an ex-vessel price agreement of \$35 per ton, reached before the beginning of the season in August, held until late in the season when a price dispute during the light-of-the-moon period resulted in a new contract of \$45 per ton. Only two fishing nights were actually lost during this dispute.

PACIFIC COAST SALMON FISHERY

During 1950, the catch of salmon in the Pacific Coast States and Alaska totaled 328,643,800 pounds compared with 484,203,800 pounds during the previous year. This represented a decrease of over 155 million pounds or 32 percent compared with 1949.

The decrease during 1950 was due mainly to a drop of almost 138 million pounds in the catch of pink salmon in Southeastern Alaska. The 1949 catch of almost 176 million pounds of pink salmon in the Southeastern Alaska Area was the largest yearly production since 1941 when over 240 million pounds were produced. As usual in even-numbered years, there was no run of pink salmon in the Puget Sound District of Washington in 1950.

The most important types of gear used in taking salmon in 1950, were purse seines, 118 million pounds; gill nets, 102 million pounds; pound nets (including floating traps), 71 million pounds; and lines, 33 million pounds. Smaller quantities were taken in reef nets, dip nets and haul seines.

PACIFIC COAST TUNA FISHERY

Landings of tuna and tunalike fishes in the Pacific Coast States during 1950 totaled a record high of 390,547,600 pounds valued at \$61,281,950 to the fishermen. This represented an increase of 18 percent in quantity and 14 percent in value compared with the landings of the previous year. The catch exceeded the previous high established in 1949 by over 58 million pounds.

During 1950, tuna prices remained stable both for the raw fish and the canned product. The contract ex-vessel prices established in 1949 of \$310 per ton for yellowfin, \$300 per ton for bluefin, \$290 per ton for skipjack, and \$195 per ton for yellowtail continued throughout 1950. Prices paid for albacore during 1950 averaged about \$400 per ton, or about the same as during the 1949 season.

Yellowfin was the most important species, accounting for 48 percent of the total landings. Skipjack and albacore represented 32 and 19 percent respectively with the balance consisting of bluefin and bonito.

UNITED STATES OYSTER FISHERY

During 1950, the production of oyster meats in the United States amounted to 76,414,900 pounds valued at \$29,596,511 to the fishermen. The production in 1945, when the last complete survey was made on this product, amounted to 75,654,300 pounds of meats valued at \$25,146,850. This represented an increase of 1 percent in quantity and 18 percent in value during 1950 compared with 1945.

The Chesapeake Area led all others in the production of oyster meats with 39 percent of the total. The Middle Atlantic Area was in second place with 24 percent followed by the Gulf Area (16 percent) and the Pacific Coast Area (11 percent). The New England and the South Atlantic Areas made up the remaining 10 percent.

Dredges accounted for 51,837,600 pounds or 68 percent of the total production, while tows, with 22,355,600 pounds, accounted for 29 percent. Grabs, by hand, rakes, and forks made up the remaining 3 percent.

In Section 13 of this Digest, under the heading, "Conversion Factors", may be found tables which give the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

CHESAPEAKE BAY OYSTER GEAR

UNITED STATES AND ALASKA SHRIMP FISHERY

During 1950, the production of shrimp in the United States and Alaska amounted to 191,474,000 pounds valued at \$43,451,503 to the fishermen. The production in 1945, when the last complete survey was made on this item, amounted to 191,296,000 pounds valued at \$21,365,409 to the fishermen. This represented an increase during 1950 of less than 1 percent in quantity but an increase of 103 percent in value compared with 1945.

The Gulf Area accounted for 151,752,800 pounds or 79 percent of the total production, while the South Atlantic Area with 36,481,500 pounds, accounted for 19 percent. All other areas made up the remaining 2 percent.

Otter trawls accounted for 98 percent of the total production. The remaining 2 percent was caught by beam trawls, channel nets, bag nets, traps and cast nets.

SECTION 13. STATISTICAL SURVEY PROCEDURE

This report is another in a series of annual statistical reports containing data on the quantity and value of the commercial catch of fishery products and the numbers of persons and operating units engaged in the commercial fisheries of the United States and Alaska. The report has been prepared and published by the Branch of Commercial Fisheries, Fish and Wildlife Service, Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Departments of Interior, Commerce, Commerce and Labor, and the United States Fish Commission.

In order that those who use the statistical data contained in this and previous reports may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over a period of years, and changes in methods have been made at times when such changes have appeared to work toward general improvement. While the surveys in the several sections are not made in the same manner, owing to varying facilities and records in different states, an attempt has been made to make the data collected by various methods comparable with respect to the same year as well as over a period of years. Throughout the entire plan it has been the intention to coordinate State and Federal fishery statistical work so that there will be as little duplication of effort as possible.

SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the statistical personnel of the Branch. In the course of these surveys, the field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employment in the fisheries, quantity of fishing gear, number and classification of fishing and transporting craft, and the volume and value of manufactured fishery products and byproducts. The various phases of these surveys are discussed in detail in the sections following.

History.--The first comprehensive statistical survey of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the United States National Museum, and associates, with the co-operation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in the early survey and recorded in Mr. Goode's reports. The survey for 1880, however did not include the Mississippi River and its tributaries. Periodic general surveys of a limited number of States of limited areas of the United States were made for various of the intervening years between 1880 and 1908 and from 1909 to 1928. A survey of the entire United States was made for 1908. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and its tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for these same sections were also collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on the wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Various sections were surveyed during the years from 1933 to 1949, inclusive. Data on the wholesale and manufacturing industries were collected in all of the surveys from 1933 to 1940, inclusive. In the years between 1941 and 1949 inclusive, the lack of personnel and funds precluded the collection of data on wholesale and manufacturing firms except for those data collected as a part of the canned fishery products and byproducts survey. A complete survey of all sections of the country, including the manufacturing and wholesaling operations, was made for 1950.

The chart on the following page indicates the years for which surveys have been made in the various sections. Figures for more recent years are available from the Service in bulletin form, but data for the earlier years are available only in the Fish Commission and Bureau of Fisheries printed reports. These reports are available for reference in the Department of the Interior library and in many public libraries.

Since the surveys of the fisheries have varied in completeness three legends have been used for the years shown in the chart to indicate whether complete, partial, or no surveys were conducted in the individual regions. The designation 'complete survey' has been used to indicate that basic operating unit, and catch data were obtained and that complete information was collected on employment in wholesale and manufacturing establishments and on the production of manufactured fishery products. The legend 'partial survey' usually indicates that operating unit and catch statistics were collected, but that no information was obtained on employment in wholesale and manufacturing establishments and that only partial data were obtained on the production of manufactured fishery products. In some instances the designation 'partial survey' is used for regions in which only catch statistics were collected. The legend 'no survey' indicates that a general canvass was not conducted to obtain operating unit, catch, employment in wholesale and manufacturing plants, and complete manufactured products data. Although the charts indicated that in certain regions no surveys were conducted some information may be available on the landings at certain important ports. Likewise information on the catch of certain species, such as menhaden, may be available as a result of information collected with the annual canned fish and byproducts survey. Data on the annual production of canned fishery products and byproducts have been collected for all regions since 1921, while information was obtained on the production of packaged fish for 1926 and annually since 1928.

A bibliography listing the various surveys made since 1880 and the publications in which the results were published appeared in Statistical Digest No. 21. A list of the statistical bulletins in the Current Fishery Statistics series published during 1950 may be found in Section 16 of the current digest.

Field Personnel.--The statistics contained in this volume have been collected by a group of trained marketing specialists which comprise a part of the permanent staff of the Branch of Commercial Fisheries of this Service.

Period Covered.--These specialists are assigned permanent field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. They normally collect statistics of fishery operations for the year preceding that in which they are working; and since their field work occupies the greater part of the year, it is usually at least a year from the end of the calendar year for which they are collecting data until the figures are available. The data usually are collected and published on a calendar year basis, although for some States they are on a fiscal year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Beginning with 1930 and continuing to the present time, they have been collected on the basis of the calendar year.

Scope.--The scope of the coastal statistical surveys include canvasses of the commercial fisheries of the oceans and bays and of the coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics of the fisheries of the Mississippi River cover canvasses of the fisheries of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is prosecuted. Statistics of the fisheries of the Great Lakes cover canvasses of the fisheries prosecuted in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries prosecuted in Lake Okeechobee. Surveys for statistics of the wholesale and manufacturing fishery industries cover such plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

Methods of Collection.--Several methods for the collection of fishery statistics are employed, each of which has been carefully studied to obtain the best results with the available personnel and funds. In most instances the field personnel obtain lists of the names of fishing vessels, names and numbers of motorboats, and names of owners of these craft from local custom officials. Also it usually is possible to obtain the names of licensed commercial fishermen, fishing craft and some statistics on the catch from State fishery agencies; from other State, county or city sources; or from private organizations.

With such preliminary records as are available for their guidance the field specialists visit each fishing community in their field unless these preliminary records are so complete that personal visits may be eliminated. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited and data are obtained from them on their purchases of fishery products. While it is impossible for the few Service representatives available for this work to interview each fisherman in a given locality, the more important ones are visited, and a sufficient number of those of lesser importance are interviewed to obtain reliable information on their production, the number of fishing craft employed, the quantity of gear operated, and the number of persons employed as fishermen.

The state fishery agencies in a number of states have developed relatively complete statistical systems which greatly facilitate the Service's surveys in these states. In these states the Service only conducts such surveys as may be necessary to make the data comparable with that of other States.

The Service obtains most of the catch statistics and usually the value of the catch direct from the records of the State fishery agencies for the fisheries of the Great Lakes, the Upper Mississippi River, and the International Lakes of Northern Minnesota. To obtain data on the number of fishermen, boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

Service statistical personnel are stationed at Seattle, Washington, and San Pedro, California, who survey the fisheries of the Pacific Coast States. As a rule they obtain figures on the volume of the catch from the records of the State fishery departments. The value of the catch is derived from dealers' records. In Washington and Oregon the data for operating units in the offshore fisheries are obtained from the records of various fishery organizations as well as from records of the State department of fisheries. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In several States, the Service and the respective State fishery agency are cooperating in the collection and publication of current monthly data on the catch. These data form the basis of the annual data published in this report for the following States: Maine, Florida, Alabama and Texas. State agencies in Connecticut, New York and Maryland also cooperate with the Service in this work but the statistics are only tabulated annually.

In the administration of the Alaska fisheries the Service obtains sworn statements concerning the activities of those prosecuting the fisheries in this area. These statements are compiled by the Alaska Branch of this Service and the summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish of the Great Lakes States usually are shown in weights as landed, which may be in the round or dressed condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks and gastropods, and the round weight of crustaceans and such mollusks as squid and octopus.

Shore and vessel fisheries.--In general, statistics of the shore fisheries, as collected by the Service's representatives, include data on the number of casual and regular fishermen; number of motor and other fishing boats and accessory boats; type and quantity of gear used; and the volume, value, and method of capture of each species caught by boats (for our purpose craft of less than 5 net tons capacity are called 'boats') for each locality or group of localities. This method is not followed in some sections where the availability of data collected by the States fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number of the crew, rig of vessels, net tonnage, kind and quantity of gear used, accessory boats carried, and volume, value, and method of capture of each species. For our purpose craft of 5 net tons capacity or more are called 'vessels'. As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of our agents collecting these data for individual vessels.

Statistics of the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not enumerated.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose these have been divided into 'regular' and 'casual' fishermen. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those whose principal business is something other than fishing, and who receive less than one-half of their annual compensation from fishing.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose fishermen not on vessels have been divided into 'regular' and 'casual' fishermen. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those whose principal business is something other than fishing, and who receive less than one-half of their annual compensation from fishing. On the Pacific Coast and in Alaska it is impossible to separate regular from casual fishermen.

The catch of fish and shellfish is credited to the port where it is landed and the craft making the catch is credited to the locality where it landed the greatest portion of its catch during the year, except in the Pacific Coast States. Prior to 1949, craft in these states were credited to its home port unless it did not fish from that port during the year. In that case, it is credited to the locality where it landed the greatest portion of its catch. In 1949 each craft in the Pacific Coast States was credited to each State in which it landed fish during the year and a total exclusive of duplication is given for the entire Pacific Coast. This system has been continued in 1950. Prior to the survey for 1942 it was the practice of the Service to credit the entire catch of a vessel to the principal port of landing, regardless of the actual point of landing. This policy was discontinued, however, since it quite often resulted in inconsistencies by presenting catches of certain fish in areas to which they are not common inasmuch as fishing vessels frequently operate in areas far removed from their principal fishing port. An outstanding example of this is the case of the Southern trawl fishery. In this fishery off the New Jersey, Maryland, Virginia, and North Carolina coasts, many fishing vessels from Massachusetts operate for 6 to 10 weeks during the winter season. Prior to the survey for 1942 the catch of these fish, principally common to these waters, was credited to Massachusetts. Under the present system, this catch is credited to the southern ports where their catch is landed.

Publication of Data.--Statistics of employment in the fisheries, craft and gear engaged, quantity and value of catch, and certain data on industries related to the fisheries are summarized according to the geographic division and published in bulletin form as soon as possible after the completion of each survey. Later, the figures, in more detail, are included in the annual reports of the Service entitled 'Fishery Statistics of the United States' and in 'Alaska Fishery and Fur-Seal Industries'.

Since 1928, data on the operating units (fishermen, fishing craft, and gear) and catch by counties for the Atlantic Coast and Gulf States have usually been included in the annual statistical reports 'Fishery Statistics of the United States' or its predecessor publication 'Fishery Industries of the United States.' However, funds were not available for the publication of county data for 1932 or for any year after 1938, except 1945. County data were collected for the areas in which surveys were conducted during those years, except in Maryland since 1942, and the data are on file in the Washington office of the Branch of Commercial Fisheries.

LOCAL AND SPECIAL SURVEYS

Landings at Certain Massachusetts Ports.--Detailed statistics are collected on the landings of aquatic products by individual fishing craft at Boston, Gloucester, New Bedford, Provincetown, and other Cape Cod ports. Service representatives are permanently stationed at each of these ports. They obtain daily figures on the quantity of fish landed by each fishing craft, the value of such fish landed, the date of departure and arrival of the craft, the gear used in their capture, and, except for ports located on Cape Cod, the grounds from which the fish were taken. The Branch of Fishery Biology and the Fishery Market News Service cooperate in the collection of these data.

Statistics on the landings at the above ports are released monthly and annually in bulletin form and detailed data are published in the annual statistical digests of the Branch. Products of American Fisheries received duty free at Boston and Gloucester from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador, have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester have been collected annually since 1893. Some data are also available for these ports for earlier years. Information on landings at Provincetown and other Cape Cod ports has been collected annually since 1945, and at New Bedford since 1938.

Statistics on the landings of Fish at Seattle, Washington.--Data on the landings by the United States halibut fleet at this port are assembled by the Service from information collected by the International Fisheries Commission. Generally the halibut fleet is considered as consisting of those vessels belonging to members of the Fishing Vessel Owner's Association, Inc., which sell their fares through the Seattle Fish Exchange. This fleet originally fished almost exclusively for halibut. With the shortening of the halibut season, particularly in Area II, a portion of the fleet has fished for other species during the closed season for halibut, and has continued selling their fish through the Exchange. Data on other fishery products received by Seattle Wholesale Dealers, including receipts from Alaska and Canada, which appeared in prior reports of this series, were collected by the Service's Seattle Representatives. Prior to 1944, receipts from Alaska and British Columbia were not included in the Seattle receipts published in the Statistical Digests. However, since October, 1938, these data were contained in the monthly and annual reports published by the Seattle Fishery Market News Office. Inasmuch as this information can be obtained from the Market News Service Annual Summaries, it is no longer published in the Statistical Digest.

Shad and Alewife Fisheries.--Owing to the importance of the Hudson and Potomac Rivers in the production of shad, surveys for statistics of the catch, value of the catch, and operating units are made annually. On the Potomac River similar statistics are also obtained for the alewife fishery. Much of the data required for these surveys are available from the State fishery agencies.

Statistics of the annual shad and alewife fisheries are not published separately in bulletin form. However, a summary of the data is published in the annual Statistical Digest.

Statistics of the shad fishery of the Hudson River are available for 1896, 1897, 1898, 1901, 1904, 1910, and annually since 1915, while data for the shad fishery of the Potomac River are available for 1896, 1901, 1904, 1909, 1915, from 1919 to 1942, inclusive, and annually since 1944. Statistics of the alewife fishery of the Potomac River are available for 1896, 1909, 1915, 1919, to 1942, inclusive, and annually since 1944.

Pacific Halibut Fishery.--Statistics of the Pacific halibut fishery are obtained by the Service's personnel in Seattle, aided by Service representatives in Alaska, and the International Fisheries Commission. The fleet classification is that of the International Fisheries Commission, under which vessels that are listed by the Commission as having their home port in Alaska are included in the 'Alaska fleet', and all other vessels of United States registry landing at Seattle or ports in British Columbia or Alaska are included in the 'Washington fleet'. The catch is credited to the point where landed in the section 'Review of Certain Major Fisheries'. In the other sections of this report, all halibut is credited to the port where landed, except that all halibut landed by United States and Alaskan craft in British Columbia is credited to Alaska. Monthly and annual statistical bulletins are available on this fishery, being published along with the statistics of the landings of fishery products at Seattle, Washington and detailed statistics are published in the annual statistical reports of the Branch. Statistics of the landings of halibut at Pacific Coast ports have been collected since 1925.

Canned Fishery Products and Byproducts.--Beginning in 1921, the Service has made annual surveys for statistics of the canned fishery products and byproducts industries of every section. These are begun the first week in January of each year for statistics of the production in the preceding year. The Service obtains by mail, so far as possible, the production of canned fishery products or byproducts from each plant in the United States engaged in this business. Where it is impossible to obtain reports by mail, the report is secured by personal visit by the Service's agents. The data obtained for canned fishery products include statistics on the yield and value of the production for each commodity by can sizes, case sizes, and trade classifications. The value shown for canned products and byproducts constitutes the gross amount received by the packer at the production point, no deductions being made for commissions or expenses. Statistics of the canned fishery products and byproducts produced in Alaska are received on the same statements obtained by the Alaska branch that include statistics of general fishery operations.

Annual statistical bulletins are issued on this trade, and detailed statistics of the output are published in the annual Statistical Digest. In addition to the data obtained on the output of these products annually since 1921, data also usually were obtained prior to 1921 for the years the various sections were surveyed.

Packaged Fish Trade.--Statistics of the annual production and value of fish packaged in the United States are obtained as a part of the survey for the statistics of the canned fishery products and byproducts industries. These data are released in bulletin form annually and later in more detailed and adjusted form in the annual Statistical Digest. Statistics of the production of packaged fish are available for 1926 and annually since 1928, except that no data was collected for the years 1941 to 1946, inclusive, in California.

Cold-Storage Holdings of Fish.--Information on the monthly freezings and holdings of fishery products is obtained from cold storage warehouses by mail and by Service employees in various cities of the country. Data are also obtained on the holdings of certain cured fish. Bulletins showing these statistics are issued monthly and annually.

Detailed cold-storage statistics also are published in the annual Statistical Digests issued by the Service. Information regarding cold-storage holdings of fishery products have been published since 1917 and data on quantities of fish frozen, for the years from 1920 to 1925, inclusive and annually since 1928.

Sponge Market, Tarpon Springs.--The major proportion of the output of sponges in Florida is sold on the Sponge Exchange at Tarpon Springs. The Service has obtained, from a representative of the Exchange, annual statistics of the quantity and value of the sponges sold by variety. Data on the quantity of sponges marketed by the Exchange is published in the Branch's annual Statistical Digest. Information regarding the transactions on the sponge exchange also are available in bulletin form for 1913, 1914, for the years since 1917.

Foreign Fishery Trade.--Statistics of the foreign fishery trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics of all known fishery products imported or exported have been assembled and published annually since 1926 in the Branch's Statistical Digest. For earlier years, they are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

PRACTICES AND TERMS

Certain practices and terms of importance used in the compilation of fishery statistics are explained below.

Days Absent.--In computing 'days absent' for vessels landing fares at the various ports, the day of arrival, but not the day of departure is included; thus a vessel leaving port on the 8th of the month and returning on the 15th of the month will be credited with 7 days absence. Prior to 1944, 'days absent' included both the day of departure and the day of arrival.

Operating Units.--Operating units as referred to in this document include persons engaged in the fisheries, and craft and gear employed in the fisheries.

Vessel.--The term 'vessel' refers to a craft having a capacity of 5 net tons or more.

Boat.--The term 'boat' refers to a craft having a capacity of less than 5 net tons.

Incidental Catch.--The term 'incidental catch' refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

Percentages.--Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, the integer is raised or lowered to make it an even number.

Fish.--The term 'fish' as used in this report includes all species belonging to the class Pisces.

Shellfish, etc.--A shellfish is an aquatic invertebrate animal having a shell, such as a mollusk, or crustacean. However, in order to reduce the classifications appearing in the catch tables, all items not properly listed as 'Fish' or 'Whale Products' have been included under 'Shellfish, etc.' Accordingly, there is included under this classification turtles, frogs, sponges, sea weed, worms, etc.

Whale Products.--Since data are not available on the poundage of whales taken, statistics appearing in catch tables on the yield of these animals represent the weight of whale products produced such as meal, sperm oil, whale oil, etc. The values shown represent the amount received by the manufacturer for the products.

Converting.--Many of the figures shown in the statistical tables published herewith have been converted to thousands of pounds or dollars. In making these conversions the largest number from which a group of items is computed is raised or lowered to the nearest thousands place. The individual items are adjusted to conform to the total thus obtained.

Confidential data.--The statistical data collected by the Branch are confidential, and unless specific authorization is given, are not divulged in any manner except to employees of the Fish and Wildlife Service whose duties require this information. Statistics on the production of wholesale and manufacturing firms are published only for commodities or geographical areas where the production of three or more firms may be grouped, unless special permission is obtained from the firms involved to release the data.

STATISTICAL SURVEY PROCEDURE

CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds for the sake of uniformity and for purposes of comparison. This presents little difficulty in the case of fish since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, thousands of shellfish, gallons of meat, etc. These many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States the problem becomes even more complex.

All bivalve mollusks are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production of certain other shellfish, such as crabs, in number.

Oysters.--Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf coasts is reported to Service personnel in bushels; and prior to the data obtained for the year 1930 conversion from bushels to pounds of meats was effected on the basis of a uniform yield of 7 pounds of meats to the bushel. However, investigations have shown considerable variation from this figure. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

MEASURES AND YIELDS OF OYSTERS

STATE	CAPACITY OF STATE BUSHEL	VARIATION FROM U.S. STANDARD BUSHEL		MARKET OYSTERS	
				YIELD PER STATE BUSHEL	YIELD PER STANDARD BUSHEL
				POUNDS OF MEATS	POUNDS OF MEATS

TEXAS	2,700.0	+ 549.6	+ 25.6	4.90	3.90

Other Mollusks.--The following table shows the conversion factors for various mollusks, other than oysters, used in this report.

AVERAGE YIELD OF CERTAIN MOLLUSKS

POUNDS OF MEAT PER U.S. STANDARD BUSHEL

STATE	CLAMS, HARD		CLAMS, SOFT	CLAMS, SURF	CLAMS, RAZOR	MUSSELS, SEA	PERIWINKLES AND COCKLES	SCALLOPS		CONCHS
	PUBLIC	PRIVATE						BAY	SEA	
MAINE	11.00	-	15.00	-	-	15.00	18.00	-	6.00	-
NEW HAMPSHIRE	-	-	15.00	-	-	-	-	-	-	-
MASSACHUSETTS	11.01	11.00	13.00	14.85	32.00	12.00	-	5.88	6.00	-
RHODE ISLAND	12.00	-	20.00	12.00	-	10.00	-	6.00	6.00	15.00
CONNECTICUT	12.00	-	20.00	-	-	10.00	-	6.20	6.00	20.00
NEW YORK	12.00	12.00	16.00	12.00	-	10.00	-	5.00	6.00	15.00
NEW JERSEY	9.00	9.00	20.00	12.00	-	-	-	-	6.00	14.00
DELAWARE	9.00	-	-	-	-	-	-	-	-	-
MARYLAND	7.00	7.00	-	15.00	-	-	-	-	-	20.00
VIRGINIA	7.00	7.00	-	-	-	-	-	-	6.00	20.00
NORTH CAROLINA	9.76	-	-	-	-	-	-	7.70	-	-
SOUTH CAROLINA	8.00	-	-	-	-	-	-	-	-	-
EAST COAST FLORIDA	8.03	-	-	-	-	-	-	-	-	-
WEST COAST FLORIDA	8.03	-	-	-	-	-	-	5.15	-	15.95

1/ INCLUDES OCEAN QUAHOG.

Other Conversion Factors.--The principal other conversion factors that have been used in this report are as follows:

Crabs, blue, hard: To convert the number of crabs to weight in pounds, divide by the following conversion factors:

Connecticut	-	4.00	Georgia	-	2.00
New York	-	4.00	Florida, East Coast	-	2.00
New Jersey	-	3.00	Florida, West Coast	-	2.02
Delaware	-	3.00	Alabama	-	2.20
Maryland	-	2.79	Mississippi	-	2.18
Virginia	-	2.93	Louisiana	-	2.16
North Carolina	-	2.00	Texas	-	1.70
South Carolina	-	2.44			

Crabs, blue, soft and peelers: To convert the number of crabs to weight in pounds divide by the following conversion factors:

Connecticut	-	3.00	North Carolina	-	2.40
New Jersey	-	4.00	South Carolina	-	4.00
Delaware	-	4.00	Florida, West Coast	-	4.00
Maryland	-	3.97	Alabama	-	3.00
Virginia	-	4.00	Louisiana	-	2.92

Crabs, rock: To convert the number of crabs to weight in pounds, divide by the following conversion factors:

Maine	-	3.00
Massachusetts	-	3.00
Rhode Island	-	3.00

Crabs, stone: To convert the number of crabs to weight in pounds, divide by the following conversion factors:

Florida, East Coast	-	1.00
Florida, West Coast	-	1.00

Horseshoe crabs: To convert the number of crabs to weight in pounds, multiply by the following conversion factor:

New Jersey	-	3.00
------------	---	------

Sponges, dried: In Florida, to convert the number of bunches to weight in pounds, multiply by the following conversion factors:

Large wool	-	11
Small wool	-	7
Wool rags	-	9
Yellow	-	4.25
Grass	-	4.166

SECTION 14.- GLOSSARY OF NAMES OF FISHERY PRODUCTS

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given.

Common names as shown in Service reports	Other common names	Scientific names
FISH		
Alewife	Branch herring, big-eyed herring, river herring	<i>Pomolobus pseudoharengus</i>
Amberjack	Blueback, glut herring, shad herring	<i>Pomolobus aestivalis</i>
Anchovy	Jack	<i>Seriola species</i>
Angelfish	<i>Engraulis mordax</i>
Anglerfish	Goosefish, allmouth, headfish, monkfish, bellyfish	<i>Pomacanthus species</i> <i>Holacanthus species</i>
Barracuda	<i>Lophus piscatorius</i>
Black bass	Smallmouth bass	<i>Sphyraena species</i>
Bluefish	Largemouth bass	<i>Micropterus dolomieu</i>
Blue pike	Tailor, skipjack	<i>Micropterus salmoides</i>
Blue runner or hardtail	Pike perch, hard pike, blue pickereel (Canada)	<i>Pomatotus saltatrix</i>
Bonito	Runner	<i>Sizostedion vitreum glaucum</i>
Bowfin	See tuna and tunalike fishes	
Buffalofish	Fresh-water dogfish, tchoupique, grindle	<i>Ameia calva</i>
Burbot	Winter carp	<i>Ictiobus species</i>
Butterfish	Lawyer, ling	<i>Lota maculosa</i>
Cabezone	<i>Poronotus triacanthus</i>
Cabio	Marbled sculpin	<i>Scorpaenichthys marmoratus</i>
Cabrilla	Crab eater, coalfish, lemonfish, black bonito	<i>Rachycentron canadus</i>
Carp	Rock bass	<i>Epinephelus analogus</i>
Catfish and bullheads	German carp, summer carp	<i>Cyprinus carpio</i>
Chub	<i>Ameiurus species</i> <i>Ictalurus species</i>
Cigarfish	Longjaw, bluefin, blackfin (United States), tullibee (Canada)	<i>Pilodictis olivaris</i>
Cisco	Scad	All <i>Leucichthys</i> except <i>artedii</i> (in Great Lakes)
Cod	Herring (Canada)	<i>Decapterus punctatus</i>
Corbina	Codfish	<i>Leucichthys artedii</i> (Lake Erie only)
Crappie	California whiting, corvina, surf fish	<i>Gadus morrhua</i> (Atlantic) <i>Gadus macrocephalus</i> (Pacific)
Crevalle	White crappie, calico bass	<i>Menticirrhus undulatus</i>
Croaker	Black crappie	<i>Pomoxis annularis</i>
Cunner	Jack, jackfish	<i>Pomoxis sparoides</i>
Cusk	Crocus, hardhead	<i>Caranx hippo</i>
Dolly varden trout	Chogset, blue perch, bergall	<i>Micropogon undulatus</i>
Dolphin	Salmon trout, bull trout	<i>Tautoglabrus adspersus</i>
Drum:	<i>Brosme brosme</i>
Black	Oyster cracker, oyster drum, sea drum	<i>Salvelinus malma</i>
Red	Channel bass, redfish, spotted bass	<i>Coryphaena hippurus</i>
Eel:	<i>Pogonias cromis</i> <i>Sciaenops ocellata</i>
Common	<i>Anguilla bostoniensis</i>
Conger	<i>Leptocephalus conger</i>
Flounder:	
Gray sole	<i>Glyptocephalus cynoglossus</i>
Lemon sole	<i>Pseudopleuronectes dignabilis</i>
Yellowtail	Dab	<i>Limanda ferruginea</i>
Dab	Sea dab	<i>Hypoglossoides platessoides</i>

(Continued on next page)

Common names as shown in Service reports	Other common names	Scientific names
Flounder: - Continued		
Blackback	Winter flounder	<i>Pseudopleuronectes americanus</i>
Fluke	{ Summer flounder, gulf flounder, flounder	<i>Paralichthys</i> species
'Sole'	<i>Pleuronectidae</i> species and <i>bothidae</i> species
'California halibut'	<i>Paralichthys californicus</i>
Unclassified	<i>Pleuronectidae</i> and <i>bothidae</i> species
Flying fish	<i>Cypselurus</i> species
Frigate mackerel	Boo hoo	<i>Auxis thazard</i>
Garfish	Gar, sea gar	<i>Lepisosteus</i> species
Gizzard shad	Nanny shad, mud shad, winter shad ..	<i>Dorosoma cepedianum</i>
Goldfish	Sand perch, gold perch	<i>Carassius auratus</i>
Goosefish	See anglerfish	
Grayfish	{ Dogfish	<i>Squalus suckleyi</i> (Pacific)
.....	{ Spiny dog	<i>Squalus acanthias</i> (Atlantic)
.....	{ Smooth dog	<i>Mustelus canis</i>
Grouper	'Sea bass'	{ <i>Epinephelus</i> species <i>Myceteroperca</i> species
Grunt	Margate fish, sailors' choice	<i>Haemulon</i> species
Haddock	<i>Melanogrammus aeglefinus</i>
Hake:		
Red	{ Squirrel hake, ling, black hake, mud hake	<i>Urophycis chuss</i> (Atlantic)
White	Hake	<i>Urophycis tenuis</i> (Atlantic)
Pacific	Merluccio	<i>Merluccius productus</i> (Pacific)
Halibut	{ <i>Hippoglossus hippoglossus</i> (Atlantic)
Hardhead	Sacramento rockfish	<i>Hippoglossus stenolepis</i> (Pacific)
Harvestfish	{ Starfish, dollarfish, pappyfish, butterfish (N.C.)	<i>Orthodon microlepidotus</i> (Pacific)
Herring:		
Lake	Herring	{ <i>Leucichthys artedii</i> (Great Lakes, except Erie)
Round	<i>Etrumeus sadina</i>
Sea	{ <i>Clupea harengus</i> (Atlantic)
Thread	<i>Clupea pallasii</i> (Pacific)
Herring smelt	<i>Opisthonema oglinum</i>
Hickory shad	Tailor shad, swip, autumnal herring ..	<i>Argentina silus</i>
Hogchoker	<i>Pomolobus medocensis</i>
Hogfish	Capitaine, perro perro	<i>Trinectes maculatus</i>
Horse mackerel	{ Pacific (see jack mackerel)	<i>Lachnolaimus maximus</i>
.....	{ Atlantic (see tuna, bluefin)	
Jack mackerel	Horse mackerel	<i>Trachurus symmetricus</i>
Jewish	<i>Promicrops itayara</i>
John dory	<i>Zenopsis ocellata</i>
Kingfish	Little roncador, croaker, tom cod ..	<i>Genyonemus lineatus</i>
King mackerel	Cero, kingfish	{ <i>Scomberomorus cavalla</i>
King whiting or 'kingfish' ...	Whiting, sea mink, ground mullet ...	<i>Scomberomorus regalis</i>
Lake trout	<i>Menticirrhus</i> species
Lamprey	<i>Cristivomer namaycush</i>
Launce	Sand eel, lant, sand launce	{ <i>Petromyzon marinus</i> (Atlantic)
Lingcod	Cultus cod, blue cod, buffalo cod, ling	<i>Entosphenus tridentatus</i> (Pacific)
Mackerel	<i>Ammodytes tobianus</i>
Marlin	<i>Ophiodon elongatus</i>
Menhaden	Mossbunker, pogy, fatback	{ <i>Scomber scombrus</i> (Atlantic)
Minnow	<i>Pneumatophorus diego</i> (Pacific)
		<i>Makaira</i> species
		<i>Brevoortia</i> species
		<i>Cyprinidae</i> family

(Continued on next page)

GLOSSARY OF NAMES OF FISHERY PRODUCTS

Other names as shown in Service reports	Other common names	Scientific names
Mojarra	Sand perch, sand bream	Gerridae family
Mooneye	Toothed herring	Hicdon species
Moonfish	<i>Vomer setipinnis</i>
.....	<i>Selene vomer</i>
Mullet	Jumping mullet, striped mullet, silver mullet	<i>Mugil</i> species
Mummichog	Mayfish, killifish	<i>Fundulus</i> species
Muttonfish	Mutton snapper	<i>Lutjanus analis</i>
Ocean pout	Eelpout, sea pout	<i>Macrozoarces anguillarls</i>
Paddlefish	Spoonbill cat	<i>Polyodon spathula</i>
Perch	Surffish	Embiotocidae family (Pacific)
Permit	<i>Trachinotus goodei</i>
Pigfish	Hogfish (N. C.)	<i>Orthopristis chrysopterus</i>
Pike or pickerel	Great lakes pike	<i>Esox reticulatus</i>
.....	<i>Esox lucius</i>
Pilchard	Sardine	<i>Sardinops caerulea</i>
Pinfish	Bream, salt-water bream	<i>Lagedon rhomboides</i>
Pollock	Boston bluefish	<i>Pollachius virens</i>
Pompano	Great pompano	<i>Trachinotus</i> species (Atlantic)
.....	<i>Palometa simillina</i> (Pacific)
Porgy	See scup or porgy
Porkfish	<i>Anisotremus virginicus</i>
Quillback	Spearfish or skinfish	<i>Carpodes</i> species
Ratfish	<i>Hydrolagus colliei</i>
Roach	Golden shiner	<i>Notemigonus crysoleucas</i>
Rock bass	Redeye, goggle-eye	<i>Ambloplites rupestris</i> (fresh-water)
.....	Groupers, sand bass	<i>Paralabrax nebulifer</i> (Pacific)
Rockfish	Rock cod, snapper	<i>Sebastes</i> species (Pacific)
Rosefish	Ocean perch, redfish, red perch	<i>Sebastes marinus</i>
Rudderfish	Blue bass, greenfish	<i>Girella nigricans</i>
.....	Halfmoon	<i>Medialuna californiensis</i>
Sablefish	Black cod	<i>Anoplopoma fimbria</i>
Salmon:
Atlantic:	<i>Salmo salar</i> (Atlantic)
Pacific:
Chinook or king	Tyee, spring	<i>Oncorhynchus tshawytscha</i>
Chum or keta	Fall, dog	<i>Oncorhynchus keta</i>
Pink	Humpback	<i>Oncorhynchus gorbuscha</i>
Red or sockeye	Blueback	<i>Oncorhynchus nerka</i>
Silver or coho	<i>Oncorhynchus kisutch</i>
Steelhead	See steelhead trout
Sand perch	Yellowtail perch	<i>Bairdiella chrysura</i>
Sauger	Sand pike	<i>Stizostedion canadense</i>
Sawfish	<i>Pristis pectinatus</i>
Sculpin	Scorpionfish	<i>Scorpaena guttata</i>
Scup or porgy	Porgee, paugy, fair mald	<i>Calamus</i> or <i>stenotomus</i> species
Sea bass:
Black	Black jewfish (Pacific)	<i>Stereolepis gigas</i>
.....	Blackfish (Atlantic)	<i>Centropristes striatus</i>
White	<i>Cynoscion nobilis</i> (Pacific)
Sea catfish	Gafftopsail	<i>Bagre marina</i>
Sea robin	<i>Prionotus</i> species
Sea trout or weakfish:
Gray	Gray trout, squeteague	<i>Cynoscion regalis</i>
Spotted	Spotted trout, speckled trout	<i>Cynoscion nebulosus</i>
White	White trout, sand trout	<i>Cynoscion arenarius</i>
Shad	American shad, white shad	<i>Alosa sapidissima</i>
Sharks	<i>Carcharodon</i> species; <i>mustelus</i> species, <i>carcharhinus</i> species; <i>sphyrna</i> species, <i>lamna</i> species; and others

(Continued on next page)

Other names as shown in Service reports	Other common names	Scientific names
Sheepshead:		
Fresh-water	Fresh-water drum, whitefish, gaspergou, gou	<i>Aplodinotus grunniens</i>
Salt-water	Redfish, fathead	<i>Archosargus</i> species (Atlantic) <i>Pimelometopon pulchrum</i> (Pacific)
Silver perch	See sand perch	
Silverside	Sparring	<i>Menidia</i> species
Skate	Ray, rajafish	<i>Raja</i> species
Skipper	Billfish	<i>Scorpaenopsis</i> species <i>Osmerus mordax</i> (Atlantic and Great Lakes)
Smelt		Atherinidae and osmeridae species (Pacific)
	Eulachon	<i>Thaleichthys pacificus</i>
Snapper:		
Lane	Schoolmaster	<i>Lutjanus synagris</i>
Mangrove	Gray snapper	<i>Lutjanus griseus</i>
Red		<i>Lutjanus blackfordii</i>
Yellowtail		<i>Ocyurus chrysurus</i>
Snook	Robalo, sergeantfish, pike	<i>Centropomus undecimalis</i>
Spadefish	Porgy (N. C.), angelfish	<i>Chaetodipterus faber</i>
Spanish mackerel	Mackerel	<i>Scorpaenopsis maculatus</i>
Splittail		<i>Pogonichthys macrolepidotus</i>
Spot	Lafayette, goody	<i>Leiostomus xanthurus</i>
Squawfish	Sacramento pike	<i>Psychocheilus grandis</i>
Squirrel hake	See hake, red	
Steelhead trout	Salmon trout	<i>Salmo gairdnerii</i>
Striped bass	Rockfish, rock	<i>Roccus saxatilis</i>
Sturgeon:		
Common		<i>Acipenser</i> species
Shovelnose		<i>Scaphirhynchus platyrhynchus</i>
Sucker	Fresh-water mullet, redfin, bayfish ...	Catostomidae species
Sunfish	Bream, perch, bluegill	Centrarchidae species
Surffish	See perch	
Swellfish	Puffer, swell toad, globefish, blowfish	<i>Sphoeroides maculatus</i>
Swordfish		<i>Xiphus gladius</i>
Tautog	Blackfish, oysterfish	<i>Tautoga onitis</i>
Tenpounder	Big-eyed herring, ladyfish	<i>Elops saurus</i>
Thimble-eyed mackerel	Chub mackerel, bullseye, mackerel	<i>Pneumatophorus colias</i>
Tilefish		<i>Lopholatilus chamaeleonticeps</i>
Tomcod	Frost fish	<i>Microgadus tomcod</i> (Atlantic) <i>Microgadus proximus</i> (Pacific)
Triggerfish		<i>Balistes caprisicus</i>
Tripletail	Sunfish (N. C.) blackfish	<i>Lobotes surinamensis</i>
Tullibee	See chub	
Tuna and tunalike fishes:		
Albacore	Longfin tuna	<i>Germo alalunga</i>
Bluefin	Horse mackerel	<i>Thunnus saltens</i> <i>Thunnus thynnus</i> <i>Thunnus secundodorsalis</i>
Bonito		<i>Sarda sarda</i> (Atlantic) <i>Sarda chiliensis</i> (Pacific)
Little	Bonito, albacore, false albacore	<i>Euthynnus alleteratus</i>
Skipjack	Striped tuna	<i>Katsuwonus pelamis</i>
Yellowfin		<i>Neothunnus macropterus</i>
	Greenland halibut	<i>Reinhardtius hippoglossoides</i> (off New England)
Turbot	American turbot, triggerfish	<i>Balistes carolinensis</i> (off Florida)

(Continued on next page)

GLOSSARY OF NAMES OF FISHERY PRODUCTS

Common names as shown in Service reports	Other common names	Scientific names
Wahoo	<i>Acanthocybium solandri</i>
Warsaw	Black jewfish	<i>Garrupa nigrita</i>
White bass	White lake bass	<i>Roccus chrysops</i>
Whitebait	Small fry of several species
Whitefish:
Common	<i>Coregonus clupeaformis</i>
Menominee	<i>Prosopium quadrilaterale</i>
Ocean	Blanguillo	<i>Caulolatilus princeps</i>
White perch	<i>Morone americana</i>
Whiting	Silver hake	<i>Merluccius bilinearis</i>
Wolfish	Catfish (New England)	<i>Anarhichas lupus</i>
Yellow perch	Ringed perch, perch	<i>Perca flavescens</i>
Yellow pike	Wall-eyed pike, pike perch, dore (Canadian)	<i>Stizostedion vitreum vitreum</i>
Yellowtail	(For Atlantic, see snapper, yellowtail)	<i>Seriola dorsalis</i> (Pacific)
Yellowtail flounder	See flounder, yellowtail
CRUSTACEANS		
Crab:
Blue:
Hard	Hard-shell crab	<i>Callinectes sapidus</i>
Soft and peelers	Soft-shelled crab	<i>Callinectes sapidus</i>
Dungeness	<i>Cancer magister</i>
King	Alaska king crab	<i>Paralithodes camtschatica</i>
Rock	<i>Cancer irroratus</i> (New England)
Stone	<i>Cancer</i> species (California)
Crawfish:	<i>Menippe mercenaria</i>
Fresh-water	Crabfish	<i>Cambarus</i> species (Atlantic)
Sea	See lobster, spiny	<i>Astacus</i> species (Pacific)
Horseshoe crab	King crab	<i>Limulus</i> species
Lobster:
Northern	<i>Homarus americanus</i> (Atlantic)
Spiny	Sea crawfish, rock lobster	<i>Panulirus argus</i> (Atlantic)
.....	<i>Panulirus interruptus</i> (Pacific)
.....	<i>Penaeus setiferus</i> (South Atlantic)
.....	<i>Penaeus duorarum</i> (Atlantic)
.....	<i>Penaeus astecus</i> and Gulf)
.....	<i>Xiphopeneus kroyeri</i> (Gulf)
.....	<i>Pandalus</i> species (Atlantic and Pacific)
.....	<i>Pandalopsis</i> species (Pacific)
.....	<i>Crangon</i> species (Pacific)
MOLLUSKS		
Abalone	<i>Halotis</i> species
Clam:
Cockle	<i>Cardium corbis</i> (Pacific)
Coquina	Pompano shells	<i>Donax variabilis</i>
Hard	Butter	<i>Saxidomus nuttali</i> (Pacific)
.....	Little neck	<i>Paphia staminea</i> (Pacific)
.....	Round clam, cherrystone, quahog, little neck	<i>Venus mercenaria</i> (Atlantic)
Ocean quahog	<i>Venus mortoni</i> (Florida)
Pismo	<i>Arcatia islandica</i>
Razor	<i>Tivela stultorum</i> (Pacific)
Soft	Soft-shell clam, sand clam, nannynose, maninose	<i>Ensis</i> species (Atlantic)
Surf	Skimmer	<i>Siliqua patula</i> (Pacific)
.....	<i>Mya arenaria</i>
.....	<i>Macra solidissima</i>

(Continued on next page)

Common names as shown in Service reports	Other common names	Scientific names
Conch	[<i>Strombus</i> species [<i>Buccinum</i> species [<i>Achea testudinialis</i>
Limpet
Mussel:
Sea	[<i>Mytilus californianus</i> (Pacific) [<i>Mytilus edulis</i> (Atlantic) [<i>Quadrula</i> species [<i>Lampsilis</i> species [<i>Unio</i> species [<i>Symphynota</i> species
Fresh-water
Octopus	Devilfish	<i>Octopus punctatus</i>
Oyster:
Eastern	Cove	<i>Crassostrea virginica</i>
Pacific (introduced)	Japanese	<i>Crassostrea gigas</i>
Western	Olympia, native	<i>Ostrea lurida</i>
Periwinkle or cockle	[<i>Littorina</i> species [<i>Lunatia</i> species
Scallop:
Bay	[<i>Pecten irradians</i> (Atlantic) [<i>Pecten aequisulcatus</i> (Pacific) [<i>Pecten magellanicus</i>
Sea
Squid	Inkfish, bone squid, tawtau	[<i>Loligo opalescens</i> (Pacific) [<i>Loligo pealei</i> (Atlantic)
OTHER		
Sea urchin	Sea eggs	<i>Strongylocentrotus drobachensis</i>
Starfish	Asteroidae class
Terrapin	Diamond-back terrapin	<i>Malaclemys</i> species
Turtle:
Green	<i>Chelonia mydas</i>
Loggerhead	<i>Caretta</i> species
Hawksbill	<i>Eretmochelys imbricata</i>
Snapper	Hard-shell, alligator turtle	[<i>Chelydra serpentina</i> [<i>Macrochelys temminckii</i>
Soft-shell	[<i>Trionyx</i> species [<i>Rana</i> species
Frogs
Irish moss	<i>Chondrus crispus</i>
Kelp	[<i>Macrocystis</i> species, <i>nereocystis</i> [species, <i>pelagophycus</i> species, [<i>alaria</i> species [<i>Laminaria</i> species
Rockweed	Seaweed
Sponge:
Glove	[<i>Spongia graminea</i> [<i>Euspongia officinalis</i>
Grass	<i>Hippospongia equina cerebriformis</i>
Sheepswool	Wool	<i>Hippospongia canaliculata gossypina</i>
Yellow	<i>Hippospongia equina elastica</i>
Trepang	Sea cucumber	<i>Cucumaria frondosa</i> , <i>Thyone briareus</i>
Bloodworms	Terebellidae family
Sandworms	<i>Nereis</i> species

SECTION 15. - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States and Alaska, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which they are taken commercially and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types of apparatus which are normally used in their capture. The gear do not necessarily appear in the order of their importance.

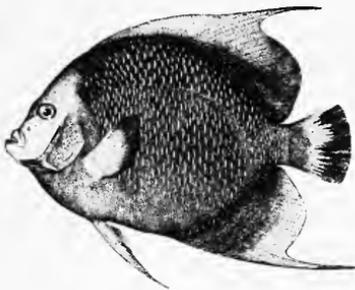

For more detailed information on the nomenclature of the fishery products listed below the reader is referred to Section 14 of this publication entitled, 'Glossary of Names of Fishery Products'.

ALEWIFE
RANGE - FLORIDA TO NEW ENGLAND
GEAR - POUND NETS, GILL NETS, WEIRS,
DIP NETS, HAUL SEINES,
FLOATING TRAPS, FYKE NETS

AMBERJACK
RANGE - FLORIDA
GEAR - HAND LINES, TROLL LINES

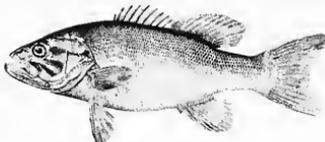

ANGELFISH
RANGE - FLORIDA
GEAR - HAUL SEINES

ANGLERFISH
RANGE - NEW JERSEY TO MASSACHUSETTS
GEAR - OTTER TRAWLS, POUND NETS

BARRACUDA, (PACIFIC)
RANGE - CALIFORNIA
GEAR - PURSE SEINES, SET LINES,
HAND LINES, TROLL LINES,
GILL AND TRAMMEL NETS.

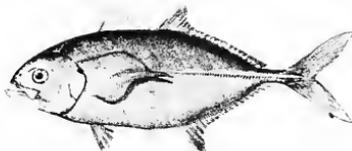

BLACK BASS
RANGE - FRESH-WATER
GEAR - HAUL SEINES, FYKE NETS, POUND
NETS, LINES

BARRACUDA, (ATLANTIC)
RANGE - FLORIDA
GEAR - TROLL LINES, HAND LINES

BLUEFISH
 RANGE - GULF OF MEXICO TO NEW ENGLAND
 GEAR - HAUL SEINES, GILL NETS, POUND NETS, TROLL LINES, PURSE SEINES

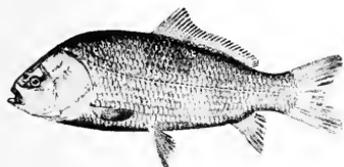

BLUERUNNER OR HARDTAIL
 RANGE - GULF OF MEXICO
 GEAR - HAUL SEINES, GILL NETS, POTS

BONITO, (ATLANTIC)
 RANGE - NORTH CAROLINA TO MASSACHUSETTS
 GEAR - POUND NETS, TROLL LINES, GILL NETS

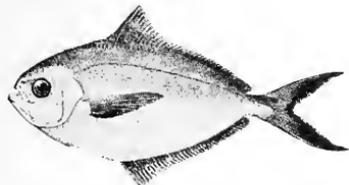

BOWFIN
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

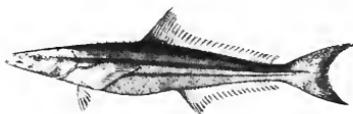

BUFFALO FISH
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, FYKE NETS, TRAMMEL NETS, TROT LINES

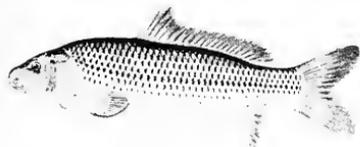

BURBOT
 RANGE - GREAT LAKES
 GEAR - GILL NETS, FYKE NETS, POUND NETS (TRAP NETS)

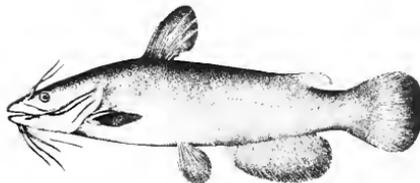

BUTTERFISH
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

CÓBIO
 RANGE - FLORIDA TO VIRGINIA
 GEAR - HAND LINES, POUND NETS

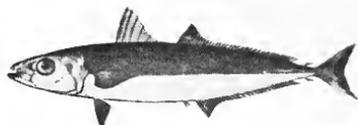

CARP
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, GILL NETS, TRAP NETS, FYKE NETS, POUND NETS, TROT LINES

CATFISH
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TROT LINES, POUND NETS, POTS, FYKE NETS

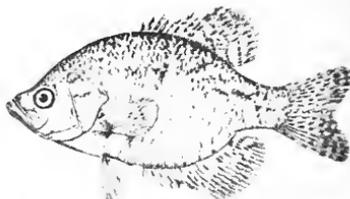

CHUB
RANGE - GREAT LAKES
GEAR - GILL NETS

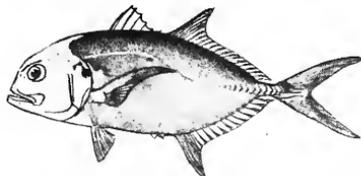

CIGARFISH
RANGE - FLORIDA
GEAR - HAUL SEINES

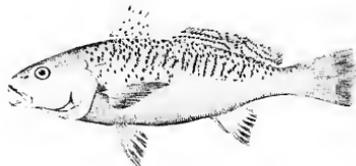

COD
RANGE - VIRGINIA TO MAINE, WASHINGTON
AND ALASKA
GEAR - OTTER TRAWLS, LINE TRAWLS,
GILL NETS

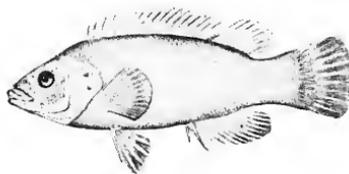

CRAPPIE
RANGE - FRESH-WATER LAKES
GEAR - HAUL SEINES, LINES, POTS

CREVALLE
RANGE - SOUTH ATLANTIC AND GULF STATES
GEAR - HAUL SEINES, GILL NETS, LINES

CROAKER, (ATLANTIC)
RANGE - GULF OF MEXICO TO NEW YORK
GEAR - POUND NETS, OTTER TRAWLS,
HAUL SEINES, GILL NETS

CUNNER
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS, HAND LINES

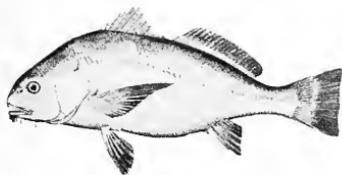

CUSK
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS, TRAWL LINES

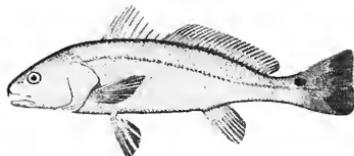

DOLLY VARDEN TROUT
RANGE - PACIFIC COAST
GEAR - POUND NETS, GILL NETS, LINES

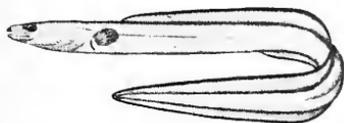

DOLPHIN
RANGE - FLORIDA TO NORTH CAROLINA
GEAR - TROLL LINES

DRUM, BLACK
RANGE - TEXAS TO NORTH CAROLINA
GEAR - HAUL SEINES, POUND NETS, LINES

DRUM, RED
RANGE - TEXAS - MARYLAND
GEAR - POUND NETS, HAUL SEINES,
GILL NETS, LINES

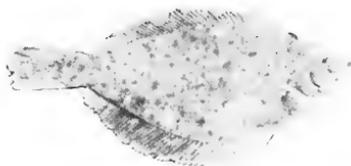

EEL, CONGER
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS

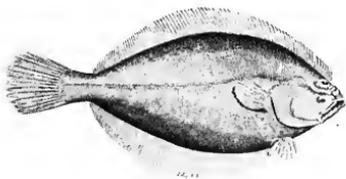

EEL, COMMON
RANGE - FLORIDA TO NEW ENGLAND AND
IN MISSISSIPPI RIVER, LAKE
ONTARIO
GEAR - POTS, SPEARS, POUND NETS

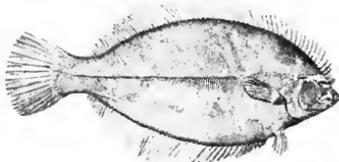

GRAY SOLE
RANGE - MASSACHUSETTS TO MAINE
GEAR - OTTER TRAWLS

LEMON SOLE
RANGE - NEW YORK TO MAINE
GEAR - OTTER TRAWLS

DAB
RANGE - MASSACHUSETTS TO NOVA SCOTIA
GEAR - OTTER TRAWLS, TRAWL LINES

BLACKBACK OR WINTER FLOUNDER
RANGE - NORTH CAROLINA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS,
FYKE NETS, SPEARS, LINES

FLUKE
RANGE - TEXAS TO MASSACHUSETTS
GEAR - OTTER TRAWLS, SPEARS, LINES

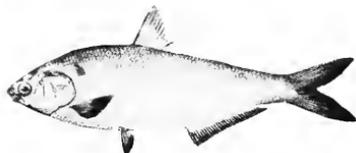

FLYING FISH
RANGE - PACIFIC AND ATLANTIC
OCEANS
GEAR - GILL NETS

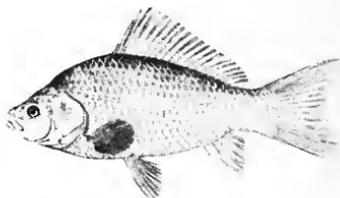

FRIGATE MACKEREL
RANGE - MIDDLE ATLANTIC
GEAR - POUND NETS

GARFISH
RANGE - FRESH-WATER
GEAR - HAUL SEINES, LINES

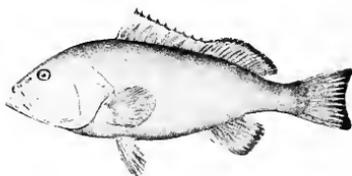

GIZZARD SHAD
RANGE - NORTH CAROLINA TO
MARYLAND, GREAT LAKES
GEAR - HAUL SEINES, POUND NETS,
GILL NETS

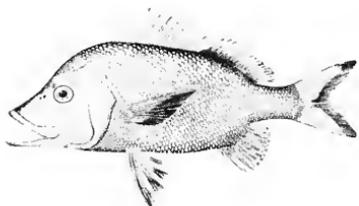

GOLDFISH
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, TRAP NETS, FYKE
NETS

GRAYFISH
RANGE - PACIFIC COAST STATES
GEAR - TRAWL LINES, OTTER TRAWLS,
GILL NETS

GROUPEE
RANGE - TEXAS TO SOUTH CAROLINA
GEAR - HAND LINES, POTS

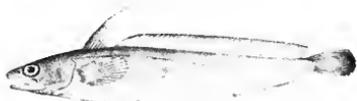

GRUNT
RANGE - FLORIDA
GEAR - POTS, GILL NETS, LINES

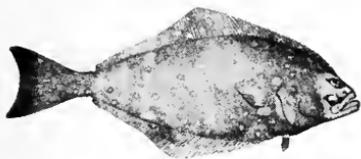

HADDOCK
RANGE - NEW ENGLAND STATES
GEAR - OTTER TRAWLS, GILL NETS
LINE TRAWLS

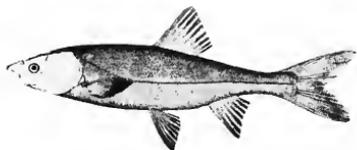

HAKE, RED
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, LINE TRAWLS

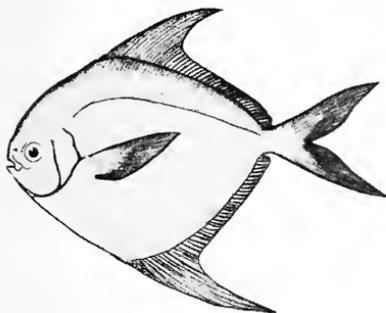

HAKE, WHITE
RANGE - CHESAPEAKE BAY TO NEW
ENGLAND
GEAR - GILL NETS, OTTER TRAWLS,
LINE TRAWLS

HALIBUT
 RANGE - PACIFIC COAST - NEW ENGLAND
 GEAR - TRAWL LINES, OTTER TRAWLS

HARDHEAD
 RANGE - CALIFORNIA
 GEAR - FYKE NETS

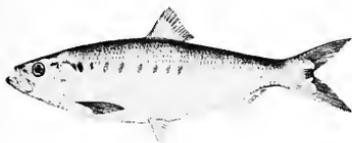

HARVESTFISH OR "STARFISH"
 RANGE - NORTH CAROLINA TO
 CHESAPEAKE BAY
 GEAR - HAUL SEINES, POUND NETS

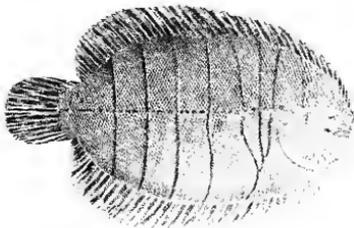

HERRING, LAKE
 RANGE - GREAT LAKES
 GEAR - GILL NETS, HAUL SEINES,
 POUND NETS, TRAP NETS

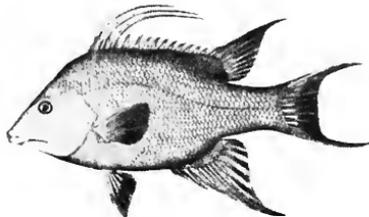

HERRING, SEA
 RANGE - NEW JERSEY TO NEW ENGLAND
 PACIFIC COAST STATES AND
 ALASKA
 GEAR - PURSE SEINES, WEIRS,
 FLOATING TRAPS, STOP SEINES

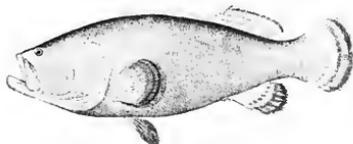

HICKORY SHAD
 RANGE - FLORIDA TO RHODE ISLAND
 GEAR - POUND NETS, HAUL SEINES, GILL NETS
 FLOATING TRAPS

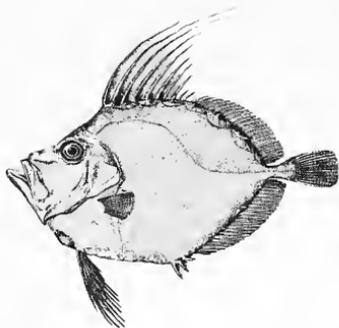

HOGCHOKER
 RANGE - CHESAPEAKE BAY
 GEAR - POUND NETS, HAUL SEINES

HOGFISH
 RANGE - FLORIDA
 GEAR - LINES

JEWFISH
 RANGE - FLORIDA
 GEAR - HAND LINES

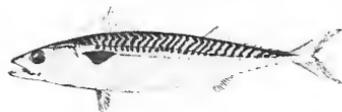

JOHN DORY
RANGE - MIDDLE ATLANTIC STATES
GEAR - OTTER TRAWLS

LAKE TROUT
RANGE - GREAT LAKES
GEAR - GILL NETS, LINES, POUND NETS
(TRAP NETS)

LANCIE
RANGE - NEW ENGLAND
GEAR - HAUL SEINES

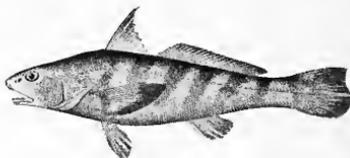

MACKEREL
RANGE - CHESAPEAKE BAY TO GULF OF
ST. LAWRENCE, CALIFORNIA
GEAR - PURSE SEINES, GILL NETS,
POUND NETS, FLOATING TRAPS,

MOONEYE
RANGE - GREAT LAKES
GEAR - HAUL SEINES

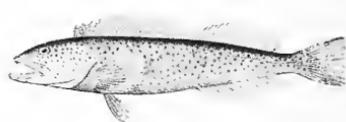

KING MACKEREL
RANGE - TEXAS TO NEW YORK
GEAR - TROLL LINES, GILL NETS,
HAND LINES

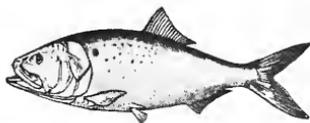

KING WHITING
RANGE - TEXAS TO MASSACHUSETTS
GEAR - OTTER TRAWLS, HAUL SEINES,
POUND NETS

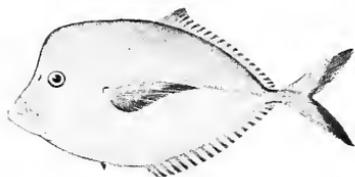

LAMPREY
RANGE - FRESH-WATER
GEAR - POTS, FYKE NETS

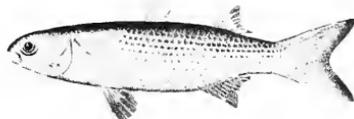

LINGCOD
RANGE - CALIFORNIA TO ALASKA
GEAR - OTTER TRAWLS, TRAWL LINES,
SET LINES, HAND LINES

MENHADEN
RANGE - GULF OF MEXICO TO NEW ENGLAND
GEAR - PURSE SEINES, POUND NETS

MOONFISH
 RANGE - FLORIDA
 GEAR - HAND LINES, HAUL SEINES

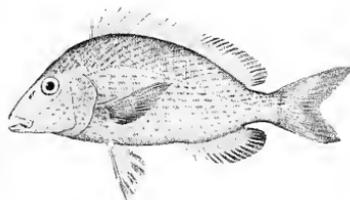

MULLET
 RANGE - TEXAS TO NEW JERSEY
 GEAR - GILL NETS, HAUL SEINES,
 POUND NETS, CAST NETS

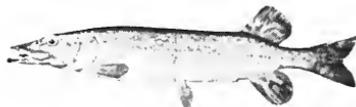

OCEAN POUT
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS

POGOLEFISH
 RANGE - GULF OF MEXICO, MISSISSIPPI
 RIVER
 GEAR - HAUL SEINES, TROT LINES

PIGFISH
 RANGE - FLORIDA
 GEAR - POTS, HAND LINES, GILL NETS

PIKE OR PICKEREL
 RANGE - FRESH WATER
 GEAR - TRAP NETS, FYKE NETS,
 GILL NETS, POUND NETS,
 HAND LINES

PILCHARD
 RANGE - CALIFORNIA TO WASHINGTON
 GEAR - PURSE SEINES, LAMPARA AND
 RING NETS, GILL NETS

PINFISH
 RANGE - FLORIDA TO NORTH CAROLINA
 GEAR - HAUL SEINES, GILL NETS

POLLOCK
 RANGE - MIDDLE ATLANTIC AND NEW
 ENGLAND STATES
 GEAR - TRAWL LINES, FLOATING TRAPS,
 POUND NETS, OTTER TRAWLS,
 GILL NETS

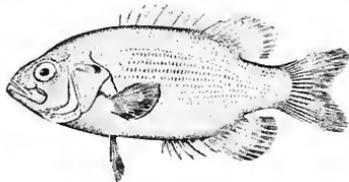

POMPANO
 RANGE - TEXAS TO NORTH CAROLINA
 GEAR - TRAMMEL NETS, HAUL SEINES,
 GILL NETS, HAND LINES

QUILLBACK

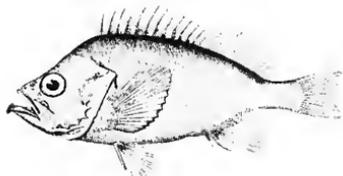

RANGE - FRESH-WATER

GEAR - HAUL SEINES, TROT LINES, FYKES

ROCK BASS

RANGE - GREAT LAKES

GEAR - TRAP NETS, FYKES,
HAUL SEINES, GILL NETS

ROSEFISH

RANGE - NEW ENGLAND

GEAR - OTTER TRAWLS

SABLEFISH

RANGE - PACIFIC COAST STATES AND
ALASKA

GEAR - TRAWL LINES, OTTER TRAWLS

SALMON, CHUM OR KETA

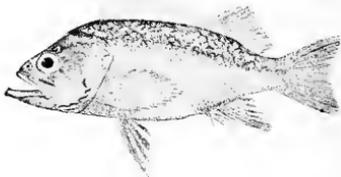

RANGE - OREGON TO ALASKA

GEAR - POUND NETS, PURSE SEINES,
GILL NETS, HAUL SEINES

RATFISH

RANGE - WASHINGTON TO ALASKA

GEAR - BEAM TRAWLS, TRAWL LINES

ROCKFISH

RANGE - CALIFORNIA TO ALASKA

GEAR - LINES, OTTER TRAWLS
PARANZELLA NETS, GILL NETS

RUOCERFISH

RANGE - CALIFORNIA

GEAR - LAMPARA AND RING NETS

SALMON, RED OR SOCKEYE

RANGE - OREGON TO ALASKA

GEAR - GILL NETS, PURSE SEINES,
POUND NETS

 GEAR - HAUL SEINES, GILL NETS, POUND
 NETS, HAND LINES, FYKE NETS

STURGEON
 RANGE - COASTAL AND RIVER AREAS
 GEAR - GILL NETS, LINES

STURGEON, SHOVELNOSE
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, LINES, POUND NETS

SUCKER
 RANGE - FRESH-WATER
 GEAR - POUND NETS, FYKE NETS, GILL
 NETS, HAUL SEINES, TRAP NETS

PICTORIAL SECTION

SUNFISH
 RANGE - FRESH-WATER
 GEAR - POTS, SEINES, TRAP NETS

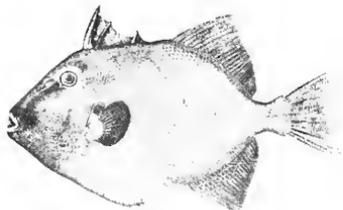

SWORDFISH
 RANGE - NEW ENGLAND AND CALIFORNIA
 GEAR - HARPOONS

TENPOUNDER
 RANGE - FLORIDA
 GEAR - HAUL SEINES

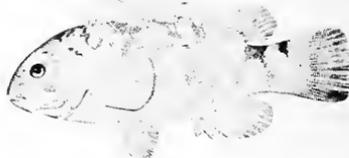

TILEFISH
 RANGE - MIDDLE ATLANTIC AND NEW
 ENGLAND STATES
 GEAR - TRAWL LINES

TRIGGERFISH
 RANGE - FLORIDA
 GEAR - HAND LINES

SWELLFISH
 RANGE - CHESAPEAKE BAY TO MIDDLE
 ATLANTIC
 GEAR - POUND NETS, HAUL SEINES,
 OTTER TRAWLS

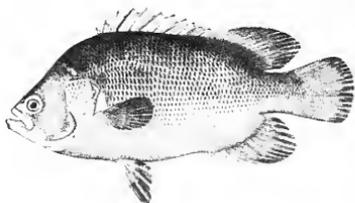

TAOTOG
 RANGE - CHESAPEAKE BAY TO NEW
 ENGLAND
 GEAR - POUND NETS, HAND LINES, POTS

THIMBLE-EYED MACKEREL
 RANGE - CHESAPEAKE BAY TO NEW ENGLAND
 GEAR - POUND NETS, PURSE SEINES,
 OTTER TRAWLS

TOMCOD
 RANGE - PACIFIC COAST, MIDDLE
 ATLANTIC AND NEW ENGLAND
 STATES
 GEAR - OTTER TRAWLS, DIP NETS

TRIPLETAIL
 RANGE - FLORIDA
 GEAR - HAUL SEINES, GILL NETS, LINES

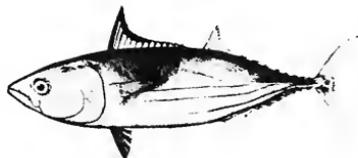

TUNA, ALBACORE
RANGE - PACIFIC COAST
GEAR - LINES

TUNA, BLUEFIN
RANGE - CALIFORNIA, NEW JERSEY TO
MAINE
GEAR - PURSE SEINES, LAMPARA NETS
TROLL LINES, POUND NETS,
HARPOONS

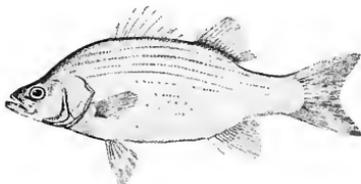

TUNA, LITTLE
RANGE - MASSACHUSETTS TO TEXAS
GEAR - POUND NETS, TROLL LINES
OTTER TRAWLS

TUNA, SKIPJACK
RANGE - CALIFORNIA
GEAR - LINES, PURSE SEINES

WHITEFISH, MENOMINEE
RANGE - ALASKA, UPPER GREAT
LAKES. TO NEW ENGLAND,
IN LAKES

RANGE - NORTH CAROLINA TO MAINE
GEAR - POUND NETS, FYKE NETS, HAUL
SEINES

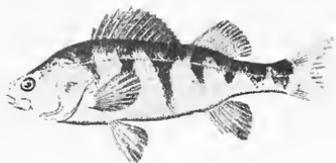

WHITEFISH, COMMON
RANGE - GREAT LAKES
GEAR - GILL NETS, POUND NETS, TRAP
NETS

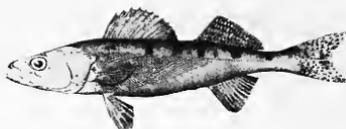

WOLFFISH
RANGE - MASSACHUSETTS AND MAINE
GEAR - OTTER TRAWLS, LINES TRAWLS

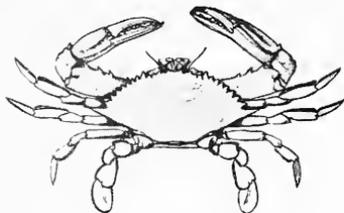

WHITING
RANGE - VIRGINIA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS

YELLOW PERCH
 RANGE - GREAT LAKES, OTHER LAKES
 GEAR - GILL NETS, TRAP NETS, POUND
 NETS, FYKE NETS

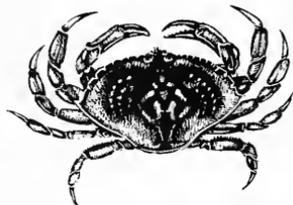

YELLOW PIKE
 RANGE - GREAT LAKES
 GEAR - POUND NETS, FYKE NETS, GILL
 NETS, TRAP NETS

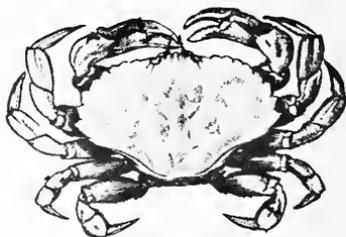

BLUE CRAB
 RANGE - TEXAS TO RHODE ISLAND
 GEAR - TROT LINES, POTS, FYKE NETS,
 DIP NETS, SCRAPES, DREDGES

KING CRAB
 RANGE - ALASKA
 GEAR - TANGLE NETS, OTTER TRAWLS

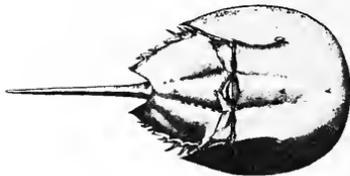

DUNGENESS CRAB
 RANGE - PACIFIC COAST STATES AND
 ALASKA
 GEAR - TRAPS

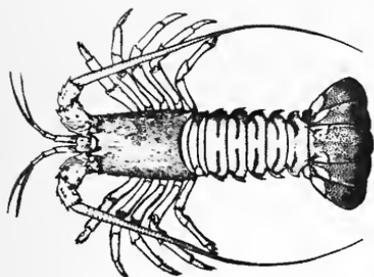

ROCK CRAB
 RANGE - NEW ENGLAND
 GEAR - POTS

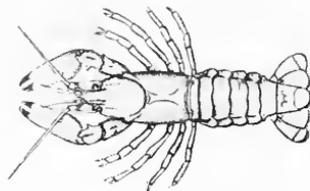

STONE CRAB
 RANGE - FLORIDA
 GEAR - DIP NETS, CRAB POTS

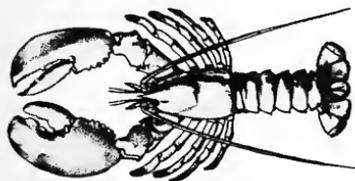

HORSESHOE CRAB
 RANGE - MARYLAND TO NEW YORK
 GEAR - POUND NETS, WEIRS, BY HAND

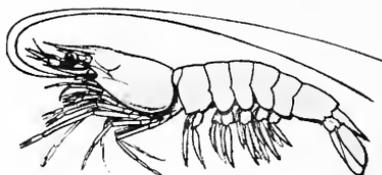

SEA CRAWFISH OR SPINY LOBSTER
 RANGE - CALIFORNIA AND FLORIDA
 GEAR - DIP NETS, POTS, HOOKS

FRESH-WATER CRAWFISH
 RANGE - RIVERS AND LAKES
 GEAR - CRAWFISH (POTS)

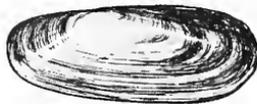

LOBSTER
 RANGE - VIRGINIA TO MAINE
 GEAR - POTS

SHRIMP
 RANGE - TEXAS TO NORTH CAROLINA,
 MAINE, CALIFORNIA,
 WASHINGTON, AND ALASKA
 GEAR - SHRIMP TRAWLS

SOFT CLAM
 RANGE - MIDDLE ATLANTIC TO
 NEW ENGLAND, PACIFIC
 COAST STATES
 GEAR - FORKS, HOES, RAKES

RAZOR CLAM, PACIFIC
 RANGE - OREGON, WASHINGTON AND
 ALASKA
 GEAR - SHOVELS

HARD CLAM
 RANGE - FLORIDA TO MAINE
 GEAR - HOES, DREDGES, TONGS, RAKES
 HANO

LIMPET
 RANGE - NEW YORK AND NEW ENGLAND
 GEAR - DREDGES

LITTLE-NECK CLAM
 RANGE - PACIFIC COAST
 GEAR - SHOVELS

PICTORIAL SECTION

CONCH
 RANGE - FLORIDA TO MAINE
 GEAR - SPONGE HOOKS, OTTER TRAWLS,
 DREDGES, POTS

BUTTER CLAM
 RANGE - PACIFIC COAST
 GEAR - SHOVELS

TREPANG
 RANGE - WASHINGTON
 GEAR - BEAM TRAWLS

FRESH-WATER MUSSEL
 RANGE - FRESH-WATER STREAMS
 GEAR - CROWFOOT BARS, PICKS, HAND

OCEAN MUSSEL
 RANGE - NORTH CAROLINA TO MAINE
 GEAR - DREDGES, TONGS, RAKES, HAND

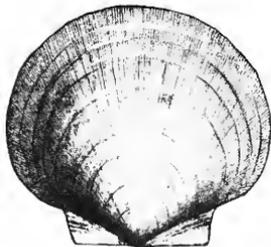

OYSTER
 RANGE - TEXAS TO MASSACHUSETTS,
 PACIFIC COAST STATES
 GEAR - TONGS, DREDGES, RAKES, HAND

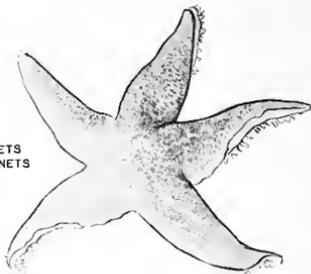

SQUID
 RANGE - VIRGINIA TO MAINE,
 CALIFORNIA AND
 WASHINGTON
 GEAR - LAMPARA NETS, GILL NETS
 OTTER TRAWLS, POUND NETS

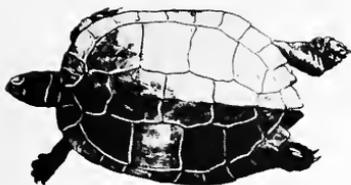

BAY SCALLOP
 RANGE - FLORIDA TO MASSACHUSETTS,
 WASHINGTON
 GEAR - DREDGES, SCRAPES, PUSH NETS,
 TONGS, RAKES

SEA SCALLOP
 RANGE - NEW JERSEY TO MAINE
 GEAR - DREDGES

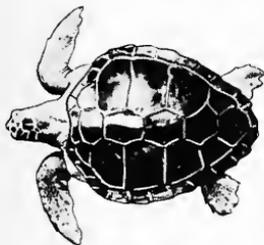

STARFISH
 RANGE - ATLANTIC AND PACIFIC COASTS
 GEAR - HOOKS, SCRAPES, "MOPS"

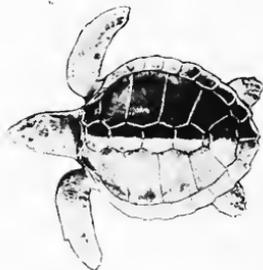

TERRAPIN
 RANGE - TEXAS TO NEW JERSEY
 GEAR - HAUL SEINES, HAND
