FISHERY STATISTICS
OF THE UNITED STATES
1954

BY

A. W. ANDERSON and E. A. POWER

UNITED STATES GOVERNMENT PRINTING OFFICE, WASHINGTON : 1956

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. Price \$1.75 (paper)

Fishery Statistics of the United States and Alaska are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of manufactured products and byproducts, the employment of men, craft, and gear in the capture of fishery products; and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality, and gear, and type of craft operated. They assist conservation agencies in regulating the commercial fisheries so as to produce maximum yields without depletion.

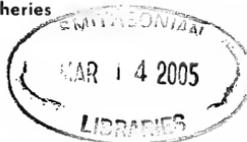

Previous statistical reports on the fishery industries were issued under the Department of the Interior in the Administrative Report series for 1938 and in the Statistical Digest series for succeeding years. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

The following is a listing of the various Statistical Digests issued since 1939:

- No. 1 Fishery Statistics of the United States, 1939
- 2 Alaska Fishery and Fur Seal Industries, 1940
- 3 Propagation and Distribution of Food Fishes, Fiscal Year, 1941
- 4 Fishery Statistics of the United States, 1940
- 5 Alaska Fishery and Fur Seal Industries, 1941
- 6 Propagation and Distribution of Food Fishes, 1941
- 7 Fishery Statistics of the United States, 1941
- 8 Alaska Fishery and Fur Seal Industries, 1942
- 9 Propagation and Distribution of Food Fishes, 1942
- 10 Alaska Fishery and Fur Seal Industries, 1943
- 11 Fishery Statistics of the United States, 1942
- 12 Propagation and Distribution of Food Fishes, 1943
- 13 Alaska Fishery and Fur Seal Industries, 1944
- 14 Fishery Statistics of the United States, 1943
- 15 Alaska Fishery and Fur Seal Industries, 1945
- 16 Fishery Statistics of the United States, 1944
- 17 Alaska Fishery and Fur Seal Industries, 1946
- 18 Fishery Statistics of the United States, 1945
- 19 Fishery Statistics of the United States, 1946
- 20 Alaska Fishery and Fur Seal Industries, 1947
- 21 Fishery Statistics of the United States, 1947
- 22 Fishery Statistics of the United States, 1948
- 23 Alaska Fishery and Fur Seal Industries, 1948
- 24 Propagation and Distribution of Food Fishes, 1944-1948
- 25 Fishery Statistics of the United States, 1949
- 26 Alaska Fishery and Fur Seal Industries, 1949
- 27 Fishery Statistics of the United States, 1950
- 28 Propagation and Distribution of Food Fishes, 1949 and 1950
- 29 Alaska Fishery and Fur Seal Industries, 1950
- 30 Fishery Statistics of the United States, 1951
- 31 Alaska Fishery and Fur Seal Industries, 1951
- 32 Propagation and Distribution of Food Fishes, 1951 and 1952
- 33 Alaska Fishery and Fur Seal Industries, 1952
- 34 Fishery Statistics of the United States, 1952
- 35 Alaska Fishery and Fur Seal Industries, 1953
- 36 Fishery Statistics of the United States, 1953
- 37 Alaska Fishery and Fur Seal Industries, 1954
- 38 Propagation and Distribution of Food Fishes, 1953 and 1954

INTRODUCTION

This report contains a review of the fishery statistics for 1954, collected by the Branch of Commercial Fisheries during 1955. These statistics include data on the volume of the catch of fishery products and their value, employment in the fisheries, quantity of gear operated, the number of fishing craft employed in the capture of fishery products, and certain information on the volume and value of the production of manufactured fishery products and byproducts.

The statistical surveys conducted during 1955 for 1954 data were under the general direction of E. A. Power, Chief, Statistical Section, and C. E. Peterson. Surveys were conducted in all sections of the United States during the year. Information on the various fisheries were collected under the supervision of the following field project leaders: Billy Greer, Dwight Hoy, Eugene Lo Verde, Charles Lyles, Charles Reardon, Victor Samson, Churchill Smith, Alfred Swanson, and James Wharton. The survey material was assembled and tabulated by the staff of the Statistical Section under the direction of Stacey Denham and Raymond Wilson. Bob Finley supervised the preparation of the tabulations for publication and wrote the narrative analyses preceding each section. G. I. Sundstrom prepared most of the illustrations in this report.

Catch data for the Great Lakes were assembled by the staff of Dr. James Moffett of the Branch of Fishery Biology and those for the fisheries of Alaska were collected by the Branch of Alaska Fisheries of the Service. Information on landings at Massachusetts ports were collected in cooperation with the Market News Section and the Branch of Fishery Biology.

In assembling the data on the fisheries, all appropriate records collected by the various State fishery agencies were used. In certain areas, information complete enough to be used by the Statistical agents was available from State agencies, and in these States only partial surveys were conducted. Information on the means of collecting the data and an explanation of terms used may be found in Section 14 of this publication. Statistics on the imports and exports of fishery products were furnished by the Bureau of the Census.

SECTION 1 - GENERAL REVIEW

The catch of fishery products in all sections of the United States and Alaska during 1954 totaled approximately 4,741,843,000 pounds valued at 355,639,000 dollars to the fishermen. This was an increase of 274 million pounds or 6 percent in quantity and 3.4 million dollars or 1 percent in value compared with the previous year. Menhaden production continued to climb and soared above 1.7 billion pounds to establish a new record. The catch of these fish, taken entirely off the Atlantic and Gulf Coast States, was 42 million pounds above the previous year's production and accounted for 37 percent of the total 1954 United States and Alaska landings of all species. The menhaden catch in 1954 was 235 million pounds above the 1936 record Pacific sardine yield which, until 1953, had been the largest annual catch of a single species taken by domestic fishermen. Landings of menhaden during the early months of the 1954 season were far greater for a comparable period than in any previous year, and at the end of July receipts were approximately 24 percent above the 1953 record production to that date. Despite sharply reduced landings in August, September, and October, caused mainly by hurricanes and other inclement weather, a record production was still established for the year. Shrimp was again the most valuable single item taken by domestic fishermen. The catch of these shellfish totaled a record 268 million pounds valued at nearly 61 million dollars to the fishermen. In the previous year 260 million pounds of shrimp valued at nearly 77 million dollars were taken. The average price-per-pound paid to fishermen for shrimp during 1954 amounted to 23¢ compared with 29¢ in 1953. The shrimp industry in the major producing areas suffered severe problems during the year resulting from an oversupply of shrimp, sharply declining prices, and increased operating and labor costs.

Several of the major foodfish recorded noteworthy gains during the year, these were: cod (up 12 million pounds); croakers (up 24 million pounds); haddock (up 15 million pounds); halibut (up 14 million pounds); Pacific mackerel (up 18 million pounds); Atlantic ocean perch (up 28 million pounds); Pacific sardines (up 127 million pounds); salmon (up 12 million pounds); and Pacific tuna (up 20 million pounds). During 1954, the dwindling cod fishery staged a minor comeback as the catch of this species rose to 53.5 million pounds, an increase of 12.2 million pounds compared with the previous year. Despite this gain in production the 1954 catch of cod was, with the exception of the low 1953 catch (41.3 million pounds), the smallest for any year for which records are available. Croakers, which dropped to the dangerously low point of 6.4 million pounds in 1953 recovered remarkably during the year and rose to a production of nearly 31 million pounds. The record yield of croakers was harvested in 1945 when nearly 65 million pounds were landed. During 1954, a good scrod haddock catch in the Northwest Atlantic tended to boost the sagging New England fishing industry considerably. Receipts of scrod haddock (75 million pounds) landed at Massachusetts ports was 16 million pounds above the 1953 production. Landings of large haddock at these ports dropped from 58 million pounds in 1953 to 55 million pounds in 1954. Receipts of North Pacific halibut by the combined United States and Canadian fleets amounted to a record 71 million pounds. The previous high year was in 1915 when 69 million pounds were landed at Northwest United States, Alaskan, and Canadian ports. Pacific mackerel recovered moderately during the year with a 25-million-pound catch. Although the 1954 catch was greater than that of the two previous years, it was smaller than in any other year since 1932 and far below the 1935 record catch of 146 million pounds. Ocean perch, which for the past twenty years has supported one of the major segments of the New England fishing industry, rallied noticeably during 1954 with a yield of 181 million pounds. To maintain the production of ocean perch it has been necessary for the fleet to fish further and further to the eastward and in recent years there has been a greater percentage of the catch of ocean perch coming from the Gulf of St. Lawrence and off Newfoundland. There were no general tieups of craft fishing ocean perch during the year as a result of price disputes or other disagreements. The 137-million-pound Pacific sardine catch during the year was heartening to both packers and conservationists alike. The 1953 yield of 9.5 million pounds was the lowest since 1915 when the fishery was in its early stages of development. The total Pacific Coast catch of salmon amounted to 325 million pounds compared with 313 million pounds in 1953. The production of chum salmon in Alaska was the largest in many years and there was a spectacular increase in the run of sockeye salmon in Puget Sound waters enroute to the rehabilitated Fraser River. The catch of these fish was the largest since 1913. Practically no pink salmon were taken in Puget Sound during 1954, as these fish occur in abundance in these waters only in odd-numbered years. The Puget Sound catch of pinks in 1953 amounted to over 34 million pounds. Despite the

GENERAL REVIEW

large packs of canned chum salmon in Alaska and sockeye salmon in Puget Sound, the total United States pack would have been about the same as in the previous year had there not been an increase of 143 thousand cases of Canadian fish, principally chum salmon, packed in Puget Sound. Tuna landings on the Pacific Coast rose to nearly 324 million pounds valued at 53 million dollars to the fishermen during 1954. Compared with the previous year, this was a volume increase of 6 percent and a value increase of 13 percent. The take of albacore in Washington and Oregon amounted to less than a million pounds. Increased imports of frozen tuna packed in domestic canneries aided in producing the record tuna pack during the year. The catch of sea herring during 1954 amounted to 167 million pounds compared with 154 million pounds in 1953. An increase of nearly 19 million pounds in New England was mainly responsible for the gain. The 1954 take of sea herring in Alaska (35 million pounds) was approximately the same as that of the previous year; however, three years before, in 1951, 82 million pounds of herring were landed in the Territory. The 42-million-pound catch of anchovies in California was less than half the record catch of the previous year.

The per capita consumption of fishery products in the United States amounted to 10.7 pounds edible weight, the same as in the previous year. During the ten-year period 1939-1948, the per capita consumption of all fish and shellfish on a round-weight basis average 22 pounds annually. However on an edible weight basis, that portion used for human food varied between 7.9 and 11.1 pounds and averaged 9.8 pounds per person during that period.

The following table contains recorded production for the areas in which surveys were made for the years shown and estimates for other regions. These catch figures indicate the trend of the yield and value of the domestic catch during recent years:

UNITED STATES AND ALASKA CATCH, 1940 - 1954

<u>Year</u>	<u>Pounds</u>	<u>Value to the fishermen</u>	<u>Average Price per pound</u>
1940	4,059,524,000	\$98,957,000	2.44¢
1941	4,900,000,000	129,000,000	2.63
1942	3,876,524,000	170,338,000	4.39
1943	4,202,000,000	204,000,000	4.85
1944	4,500,000,000	213,000,000	4.73
1945	4,575,500,000	269,900,000	5.90
1946	4,456,000,000	310,000,000	6.96
1947	4,344,000,000	307,600,000	7.08
1948	4,575,000,000	367,000,000	8.02
1949	4,796,000,000	339,000,000	7.06
1950	4,884,909,000	343,876,000	7.04
1951	4,414,045,000	360,996,000	8.18
1952	4,418,442,000	360,135,000	8.15
1953	4,467,960,000	352,275,000	7.88
1954	4,741,843,000	355,639,000	7.50

Poundagewise, San Pedro, California, resumed its position as the nation's leading fishing district during 1954, with receipts of approximately 358 million pounds consisting mainly of tuna and Pacific sardines. Lewes, Delaware, was in second place with 309 million pounds comprised almost entirely of menhaden, followed by Gloucester, Massachusetts, with 249 million pounds, mostly foodfish. Reedville, Virginia, and Port Monmouth, New Jersey, occupied fourth and fifth positions respectively. San Pedro, California, was also first in value of landings with the catch at this port having yielded 35 million dollars, while San Diego, California, (22 million dollars) was in second place.

It was estimated that the 1954 catch was marketed as follows: 1,563 million pounds (round weight basis) as fresh and frozen products; 1,934 million pounds for byproducts and bait; 1,159 million pounds for canning; and 85 million pounds for the production of cured products.

GENERAL REVIEW

The pack of canned fishery products in the United States, Alaska, Hawaii, Puerto Rico, and American Samoa in 1954 amounted to nearly 863 million pounds valued at 331 million dollars to the packers. This was an increase of 9 percent in volume and 8 percent in value compared with the previous year. Increased packs of tuna, Maine and Pacific sardines, salmon, and fish packed for pet food were responsible for the gain in production. Record packs of tuna and pet food were canned during the year. The production of fishery byproducts in the above areas during 1954 was valued at over 82 million dollars -- 11 percent more than in the previous year. During 1954, canned fishery products were packed in 402 plants while byproducts were manufactured in 242 plants.

The fish stick industry continued to expand during 1954 with a production of 50 million pounds reported for the year. In 1953, the total production amounted to 7.5 million pounds. The 1954 output averaged over 4 million pounds of sticks per month. Toward the end of the year, production was accelerated and in the last quarter, the output of sticks averaged over five million pounds per month. The sticks were manufactured from both imported and domestic fish with a majority of the production coming from imported cod.

During 1954, a total of 717 vessels were documented as fishing vessels for the first time, compared with 729 in 1953, 675 in 1952, and 780 in 1951. Of the total vessels documented in 1954, 465 were built in 1954, 85 in 1953, and the remainder (167) in years prior to 1953. In the four years ending with 1954, a total of 2,901 vessels received their first documents as fishing craft. In 1940 the entire fleet in the United States and Alaska totaled only 5,562 vessels. Although the fishing fleet has increased sharply, the annual catch has not increased proportionally compared with prewar production. This has been due largely to the low yields of salmon in Alaska and Pacific sardines in California.

VESSELS FIRST DOCUMENTED AS FISHING CRAFT, 1939 - 1954

<u>Year</u>	<u>Number</u>
1939	357
1940	320
1941	354
1942	358
1943	358
1944	635
1945	741
1946	1,085
1947	1,300
1948	1,184
1949	1,002
1950	812
1951	780
1952	675
1953	729
1954	717

A total of nearly 303 million pounds of fishery products were frozen during 1954 by approximately 270 domestic freezing plants which reported their operations to the Fish and Wildlife Service. This was an increase of 27 million pounds or 10 percent compared with the freezings of the previous year. It was estimated that a catch of approximately 596 million pounds of fish and shellfish was required to produce the 303 million pounds of round, dressed and drawn fish, fish fillets, and shellfish frozen during 1954. Of the total, 234 million pounds consisted of fish and 69 million pounds, shellfish. Average monthly holdings of frozen fishery products amounted to 163 million pounds, an increase of more than 7 million pounds compared with the previous year's average.

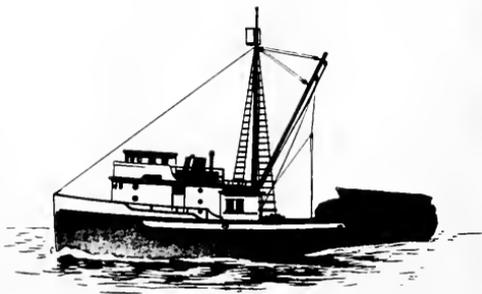

GENERAL REVIEW

6

In 1954, the value of United States foreign trade in fishery products amounted to nearly 284 million dollars of which more than 252 million dollars represented the value of products imported for consumption and approximately 32 million dollars the value of exports of domestic fishery products. The value of fishery imports for consumption was 3 percent greater than in the previous year, while the value of exports of domestic fishery products increased 13 percent. The increase in the value of exports was due principally to a large gain in exports of fish oils to Europe. The value of fishery imports entered for consumption during 1954 established a new record; the former high year being 1953 when the value of imports totaled nearly 245 million dollars. Among the more important edible imports received in much greater volume than in the previous year were fresh or frozen groundfish fillets, sea herring, and tunns; and canned bonito and yellowtail.

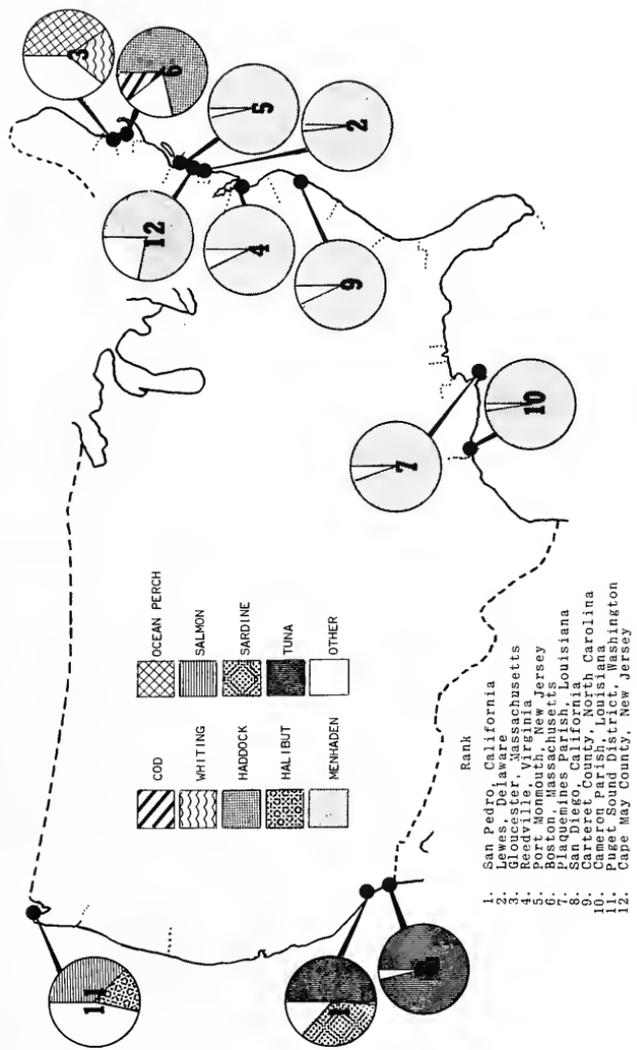

Complete statistical surveys covering the fisheries of the United States and Alaska were conducted in all areas for 1954. This was the first year since 1950 that a complete survey has been made. Section 14 of this publication contains a table indicating the areas surveyed for fishery data from 1880 to the present time. Due to budgetary limitations and other factors, only four complete surveys have been conducted since 1880. It was felt, however, that the additional funds allotted through legislation during 1954 would provide for the collection of operating unit and catch statistics in all areas of the United States and Alaska in future years.

Detailed summaries of the catch and operating unit data for the United States and Alaska have been previously printed in bulletin form (Current Fisheries Statistics, No. 1382). Of importance also to those persons interested in the most recent fisheries data available, is the annual publication "Fisheries of the United States and Alaska, A preliminary Review". This leaflet, comprising approximately 50 pages is available in March of each year and contains preliminary fishery data for the previous calendar year. This free publication may be obtained from the Division of Information, United States Fish and Wildlife Service, Washington 25, D. C.

GENERAL REVIEW

MANUFACTURED FISHERY PRODUCTS

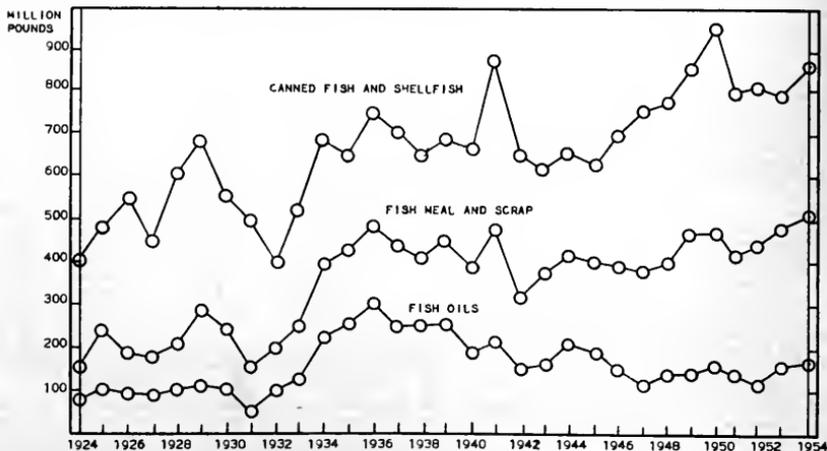

The production of manufactured fishery products (canned, packaged, cured, and by-products) in the United States and Territories (Alaska, American Samoa, Hawaii, and Puerto Rico) in 1954 was valued at approximately 664 million dollars. This was an increase of 13 percent compared with the previous year. Canned products accounted for 50 percent of the total value; packaged fish and shellfish, 33 percent; cured fish, 5 percent; and fish and shellfish byproducts, 12 percent.

The pack of canned fishery products in the areas listed above during 1954 amounted to 863 million pounds valued at 331 million dollars to the packers. This represented an increase of 9 percent in volume and 8 percent in value compared with the previous year. The domestic pack of tuna during 1954 established a new record with a production of 10.9 million cases valued at 142 million dollars to the packers. The canned salmon pack recovered slightly during the year and amounted to nearly 4.2 million cases valued at 92 million dollars compared with 3.9 million cases valued at 82 million dollars in 1953. Pacific sardines, which for many years yielded annual catches of more than one billion pounds, and a record five million-case pack in 1950, recovered noticeably from the 64 thousand-case-pack of the previous year and accounted for 1.3 million cases in 1954. The catch of this item would have been considerably greater had there been a stronger market for canned sardines. Cannerymen in Maine packed 2.9 million cases of sardines valued at 18 million dollars. Compared with the previous year this was an increase of 5 percent in volume and 7 percent in value. The pack of anchovies, 506 thousand cases, was less than one-half the 1953 record pack. The animal-food pack continued to climb during the year and amounted to a record 4 million cases valued at 18.4 million dollars.

The 1954 production of fishery byproducts was valued at 82 million dollars — 11 percent more than the value of the previous year. Production of fish and marine-animal meal and scrap amounted to 257 thousand tons valued at 32.8 million dollars to the producers. The yield of marine-animal body oils amounted to 21.6 million gallons valued at 11.4 million dollars to the manufacturers. Some of the other important byproducts manufactured during the year were marine pearl-shell, oyster-shell, and fresh-water shell products valued at 17.0 million dollars, and fish solubles and homogenized-condensed fish valued at 10.6 million dollars.

The following data have been previously published in Current Fishery Statistics No. 1357.

PRODUCTION OF CANNED FISH, FISH MEALS, AND FISH OILS, 1924 - 1954

- 1/ THIS ITEM IS USUALLY AN INTERMEDIATE PRODUCT AND MAY ALSO BE SHOWN IN THE FINAL STAGE OF PROCESSING.
- 2/ A SMALL QUANTITY OF COD-LIVER OIL IS INCLUDED WITH UNCLASSIFIED LIVER AND VISCERA OIL.
- 3/ INCLUDES A SMALL PACK OF BIG-EYED TUNA.
- 4/ SMALL QUANTITIES OF BLUEFIN AND SKIPJACK ARE INCLUDED WITH THE UNCLASSIFIED SPECIES.
- 5/ INCLUDES FRESH FILLETS OF BLUEFISH, CATFISH, SEA BASS, SEA TROUT, SMELT, STRIPED BASS, SUCKERS, AND UNCLASSIFIED SPECIES; FROZEN FILLETS OF BLUEFISH, CATFISH, MULLET, SMELT, AND UNCLASSIFIED SPECIES; FROZEN STEAKS OF SABLEFISH AND SWORDFISH.
- 6/ INCLUDES FROZEN ALEWIFE ROE; CODFISH CAKES; CREAMED HADDOCK AND FINNAN HADDIE; SHAD ROE; LOBSTER BISQUE, CHOWDER, NEWBURG, STEW, AND THERMIDOR; ABALONE STEAKS AND PATTIES; OYSTER STEW; SQUID; FISH CAKES; GEFILTEFISH (INCLUDING SOME CHILLED); SEAFOOD DINNERS; AND SOUPS.
- 7/ INCLUDES CANNED CISCO, HERRING, AND DEEP SEA ROE; LUMPFISH, SALMON, AND STURGEON CAVIAR.
- 8/ INCLUDES CANNED ANCHOVY PASTE; CREAMED CODFISH AND SALT COD; RED DRUM; FINNAN HADDIE; HERRING SPREAD AND HERRING FOR BAIT; GROUND MENHADEN; SALMON SPREAD; SALMON IN SAUCE; SALMON WITH MACARONI AND PEAS; AND SALTED SALMON LIVERS; LIVER OIL FROM BURBOT, COD, HAKE, HALIBUT, POLLOCK, RATFISH, SABLEFISH, TUNA, WHALE, AND UNCLASSIFIED SPECIES; FROG LEGS IN NEWBURG SAUCE; MUSSELS; SCALLOP NEWBURG AND SCALLOPS IN MUSHROOM SAUCE; SEAFOOD NEWBURG; AND BOUILLABISSE.
- 9/ INCLUDES SALTED BLUEFISH, EELS, GROUND FISH, HAKE, PACIFIC SARDINES, PIGFISH, SEA TROUT, SHAD, SHARK HIDES, SPOT, AND SHRIMP IN VINEGAR.
- 10/ INCLUDES SMOKED ALBACORE, ALEWIVES, BUFFALOFISH, COD, HADDOCK, MACKEREL, MOONEYE, SCUP, SMELT, SPANISH MACKEREL, SWORDFISH, WHITE BASS, AND UNCLASSIFIED SPECIES, INCLUDING FISH SAUSAGE.
- 11/ INCLUDES LIVER OIL FROM BURBOT, COD, HAKE, HALIBUT, POLLOCK, RATFISH, SABLEFISH, TUNA, WHALE, AND UNCLASSIFIED SPECIES; AND VISCERA OIL FROM UNCLASSIFIED SPECIES.
- 12/ INCLUDES AGAR-AGAR, AMINO ACID SOLUTION, VITAMIN A, GLUE, IRISH MOSS EXTRACT, KELP PRODUCTS, LIQUID FERTILIZER, AND PEARL ESSENCE.

NOTE:--SOME OF THE ABOVE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM RAW PRODUCTS IMPORTED FROM ANOTHER COUNTRY; THEREFORE, THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH WITHIN THE UNITED STATES AND ALASKA. THE LIME AND POULTRY FEED MANUFACTURED FROM SHELL PRODUCTS WERE PRODUCED FROM OYSTER SHELLS THAT ARE NOT INCLUDED IN THE CATCH STATISTICS.

CANNED FISHERY PRODUCTS AND BYPRODUCTS

The pack of canned fishery products in the United States, Alaska, American Samoa, Hawaii, and Puerto Rico, in 1954 amounted to nearly 863 million pounds valued at approximately 331 million dollars to the packers. This was an increase of 9 percent in volume and 8 percent in value compared with the previous year. Increased packs of tuna, Maine and Pacific sardines, salmon, and fish packed for pet food were responsible for the gain in production. Record packs of tuna and pet food were canned during the year. During 1954, canned fishery products were packed in 402 plants in 25 States and the four territories mentioned above.

The pack of tuna and tunalike fishes exceeded that of any other item in both volume and value in 1954. The canned production of these fish amounted to 10.9 million standard cases (214 million pounds) valued at 142 million dollars. This was an increase of 1.3 million standard cases and 15.9 million dollars compared with 1953. The value of the tuna pack was 54 percent greater than that of the second place salmon. During 1954, tuna was packed in 7 States, American Samoa, Hawaii, and Puerto Rico. This was the first year that tuna was canned in American Samoa.

The 1954 pack of canned salmon amounted to 4.2 million standard cases (200 million pounds) valued at 92.3 million dollars to the canners. This was an increase of 6 percent in volume and 12 percent in value compared with the previous year. The largest pack of sockeye salmon in the Puget Sound area since 1913, and an unusually large pack of chum salmon in Southeastern Alaska were mainly responsible for the gain.

Pacific sardines returned to Southern California waters in 1954 after an almost complete absence the previous two years. The catch of 137 million pounds was used to produce a pack of approximately 1.3 million standard cases (60 million pounds), compared with less than 64 thousand cases in 1953. Had there been a market for additional supplies of canned sardines it is estimated that the pack could have been doubled.

The pack of Maine sardines amounted to more than 2.9 million standard cases (60 million pounds) valued at 18 million dollars to the packers. Compared with the previous year, this was an increase of 5 percent in volume and 7 percent in value.

The packs of Pacific and jack mackerel declined sharply in 1954 compared with the previous year. The decreases were caused by inability of fishermen to locate schools of these fish. A reduction of over 50 percent in the pack of anchovies was caused by a lack of a market in the Philippines where most of the pack had been sold in recent years.

Both the packs of oysters (446 thousand standard cases) and shrimp (935 thousand standard cases) were nearly 10 percent less than in 1953.

The 1954 production of fishery byproducts in the United States, Alaska, American Samoa, and Puerto Rico was valued at over 82 million dollars -- 11 percent more than in the previous year. The production of fish meal amounted to 257 thousand tons valued at nearly 33 million dollars -- a new record. The production of meal was more than 18 thousand tons larger than in the previous year, and 13 thousand tons above the previous 1936 record production. The volume of feed material produced in 1954 was far greater than in 1936 since the production in that year included 23 thousand tons of menhaden acid scrap used as fertilizer. No acid scrap was manufactured in 1954. The production of menhaden meal in 1954 amounted to 183 thousand tons -- a new record. A total of 6.5 thousand tons of Pacific sardine meal was produced during the year -- 6.4 tons more than in the previous year, but only 5 percent of the record yield of this meal (122 thousand tons) which occurred in 1936 when the sardine fishery was at its peak. In addition to the fish meal produced for animal feed, 58 million pounds of homogenized-condensed fish and 172 million pounds of condensed-fish solubles were also manufactured for use in mixed animal feeds.

The production of marine-animal oils in the United States and Alaska during 1954 amounted to nearly 22 million gallons valued at approximately 13 million dollars to the producers. This was an increase of 8 percent in volume compared with 1953, but only 55 percent of the record 1936 production when almost 40 million gallons of oil were produced.

GENERAL REVIEW

PACKAGED FISH

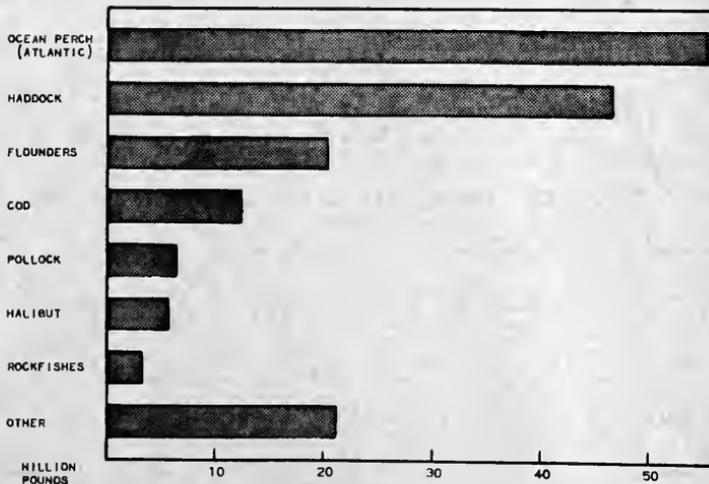

During 1954, the production of fresh and frozen packaged fish fillets, steaks, and split "butterfly" in continental United States totaled nearly 174 million pounds valued at more than 47 million dollars. Compared with the previous year this production was an increase of 13.2 million pounds or 8 percent in volume and 1.3 million dollars or 3 percent in value.

Atlantic ocean perch fillets continued to be the largest single packaged item produced in 1954. The output of this item amounted to nearly 56 million pounds. Haddock fillets with 47 million pounds and flounder fillets with more than 20 million pounds were second and third in volume. Atlantic ocean perch was also the most valuable fish packaged during 1954 having a value of 12.6 million dollars. Haddock fillets ranked second with a value of 11.6 million dollars followed by flounder fillets valued at 7.6 million dollars. Of the total packaged fish, 94 percent was filleted, 5 percent steaked, and the remaining 1 percent, split "butterflied."

It was estimated that approximately 510 million pounds of fish were used to manufacture the 174 million pounds of packaged fish produced in 1954.

Data in this section cannot be correlated directly with that information published in the section on Manufactured Fishery Products, as that section contains a small production in Alaska which is not included in the following tables. Preliminary data on the production of packaged fish during 1954 were previously published in Current Fishery Statistics No. 1129.

FROZEN FISH TRADE

A total of nearly 303 million pounds of fishery products was frozen during 1954 by approximately 280 domestic freezing plants which reported their activities to the Fish and Wildlife Service. This was an increase of 27 million pounds or 10 percent compared with the freezings of the previous year. It was estimated that a catch of approximately 596 million pounds of fish and shellfish was required to produce the 303 million pounds of round, dressed, and drawn fish, fish fillets, and shellfish frozen during 1954. Of the total, 234 million pounds consisted of fish and 69 million pounds, shellfish. Average monthly holdings of frozen fishery products amounted to 163 million pounds, an increase of more than 7 million pounds compared with the average of the previous year.

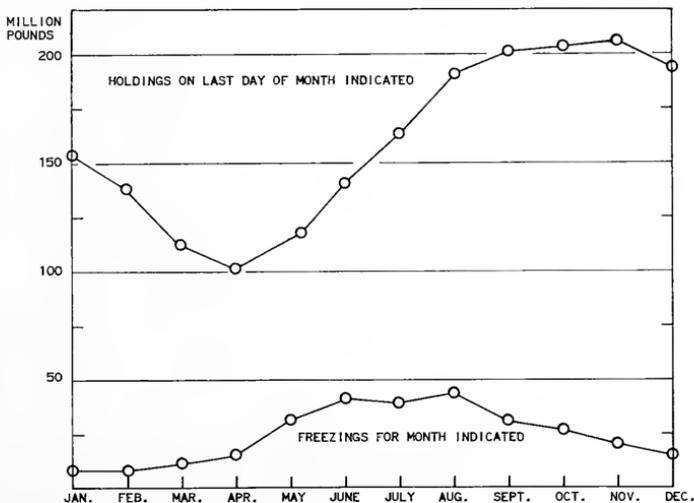

Salt-water fish comprised 75 percent of the total freezings during 1954, while shellfish contributed 23 percent and fresh-water fish the remaining 2 percent. Freezings of fillets from salt-water species rose sharply and totaled 96 million pounds compared with 75 million pounds in 1953.

Six items accounted for 69 percent of the total poundage frozen during the year. These were: shrimp (including shrimp meat), 19 percent; ocean perch, 15 percent; halibut, 11 percent; headed and gutted whiting, 10 percent; bait and animal food, 7 percent; and haddock, 7 percent.

According to geographical sections, the New England States led all others in quantity of fishery products frozen, accounting for 47 percent of the total. The South Central Area ranked second with 17 percent, followed by the Pacific Coast States with 14 percent and Alaska with 11 percent.

Data on the holdings and freezings of fishery products for 1954 have been previously published in Current Fishery Statistics No. 1085. Detailed data are published monthly in the Frozen Fish bulletin of the Current Fishery Statistics series.

CUTAWAY VIEW OF THE FISH AND WILDLIFE SERVICE RESEARCH VESSEL DELAWARE SHOWING BRINE-FREEZING TANKS AND FISH-STORAGE BINS.

HOLDINGS

Stocks of frozen fishery products during 1954 reached a peak of 206 million pounds on November 30. Average holdings of fishery stocks soared to a new record during the year with a monthly average of nearly 163 million pounds. Ten years earlier in 1944, average holdings amounted to 95 million pounds. The low point for holdings during 1954 was reached on April 30, when 110 million pounds were in storage. According to geographical distribution of average monthly holdings, the New England States ranked first, followed by the Middle Atlantic and Pacific Coast States.

COLD-STORAGE HOLDINGS OF CURED FISH

During 1954, monthly cold-storage holdings of cured herring averaged 9.2 million pounds while those for mild-cured salmon averaged 4.1 million pounds. Compared with 1953, this represented a decrease of 28 percent in the average monthly holdings of cured herring and 11 percent in the average mild-cured salmon stocks. Cold-storage stocks of cured herring were largest on June 30, when they reached nearly 12 million pounds. The peak period for mild-cured salmon during 1954 was on September 30 when these stocks reached almost 6 million pounds.

GENERAL REVIEW

FOREIGN FISHERY TRADE

In 1954, the value of United States foreign trade in fishery products amounted to nearly 284 million dollars of which more than 252 million dollars represented the value of products imported for consumption and approximately 32 million dollars the value of exports of domestic fishery products. The value of imports for consumption was 3 percent greater than in the previous year, while the value of exports of domestic fishery products increased 13 percent. The value of fishery imports entered for consumption during 1954 established a new record; the former high year being 1953, when the value of imports totaled nearly 245 million dollars.

Imports amounted to 803 million pounds of edible fishery products valued at over 203 million dollars; and nonedible products valued at nearly 49 million dollars. Among the more important items received in much greater volume than in the previous year were fresh or frozen groundfish fillets, sea herring, and tuna; and canned bonito and yellowtail.

Exports of edible fishery products totaled almost 63 million pounds valued at 16 million dollars and exports of nonedible products were valued at over 15 million dollars. Exports of canned fish and shellfish decreased from approximately 58 million pounds in 1953 to 49 million pounds in 1954. The quantity of fish oil exported (142 million pounds) increased 30 percent during the same period.

SECTION 2 - NEW ENGLAND FISHERIES

The 1954 catch of fish and shellfish in the coastal areas of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) totaled 966 million pounds valued at nearly 58 million dollars to the fishermen. This was an increase of 102 million pounds or 12 percent in quantity but a decrease of 2.5 million dollars or 4 percent in value compared with the landings of the previous year. Ocean perch receipts (181 million pounds) rose nearly 28 million pounds during the year. Sea herring (129 million pounds) landings gained 19 million pounds while haddock (155 million pounds) rose 15 million pounds compared with the previous year. Fishermen employed in the New England States during 1954 numbered 23,348 compared with 26,392 during the previous year. There were 886 vessels of five-net tons and over fishing in this area during the year compared with 1,072 in 1953.

The phenomenal expansion of the fish-stick industry, a heavy run of scrod haddock, a number of bad storms, and economic difficulties were the major highlights of the New England fishing industry in 1954. Beginning with a very nominal production in January, the fish-stick industry expanded so rapidly that by March, six firms were operating in Massachusetts, and one each in Maine and Rhode Island. As is the case in all mushrooming industries, efficiency of operation was overlooked for volume production. However, later in the year, efficiency in the plants increased and some manufacturers modified their operations by the installation of labor-saving devices. The growth of the fish-stick industry resulted in the manufacture of fishery products in a number of areas which had not previously shared in the handling of fillets. This increased employment and raised the economic level of these communities. The imported blocks and slabs required additional warehouse space which conflicted with the need for space for domestic fish. Producers of fresh fish from the nearby banks found it difficult to handle their production and friction developed between groups and threats of action to block these imports were considered. After due thought, it was suggested that additional freezer space and port facilities were needed foremost.

Insurance rates, which had always been rather high in the fishing industry, suddenly took a sharp rise early in the year. The rates on vessels from some areas rose to about one thousand dollars per month per hull. Early in the year there was a good run of fish in the vicinity of Brown's Bank; this condition aided fishermen greatly in meeting their premiums. However, this run declined late in May. During the period, June - October, haddock scrod were in such abundance that boats could make a load in less than the time allotted at sea by the union. Consequently the market sagged through June and July, and finally broke in August to less than four cents per pound for scrod. The union asked for a six cents guarantee on the price of these fish. Much of the fleet tied up from mid-August to mid-September and then sailed with fishermen guaranteed 12 dollars for each day at sea but with no guarantee as to the price of fish. The disagreement was settled and immediately the boats began to land as brokers. By fall the owners were investing cash into the boats in an effort to keep them going and there was considerable pessimism about the entire outlook in the New England fish trade.

The weather undoubtedly had some effect on the New England fisheries during the year. In an area which normally receives about 38 inches of rainfall annually, the total for the year was in the vicinity of 60 inches. In the month of May alone, 12 inches of water fell, bursting dams, washing out roads, and carrying silt to the sea. In addition to the heavy rainfall, three severe hurricanes damaged the New England fisheries immeasurably. Out of a total of 39 pound nets in the Provincetown, Massachusetts area, only four were left in fishing condition.

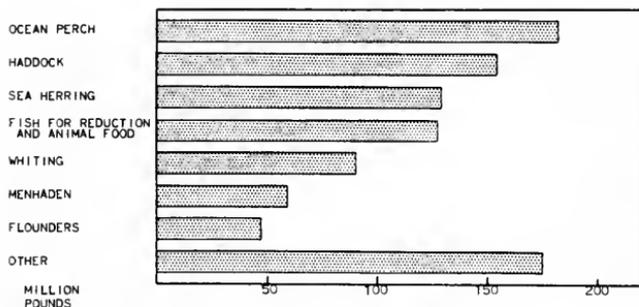

The menhaden season in New England was the most successful in recent years, and landings amounted to nearly 60 million pounds during the year. The fish meal plants in the area seemed to prefer the menhaden over the trash fish for two reasons: first, there was little dirt and mud on the menhaden as there often is in trash fish, resulting in a more normal wear in the machinery; and second, the menhaden are generally of uniform size. The demand for fish meal held steady all summer in spite of declining poutry prices.

NEW ENGLAND FISHERIES

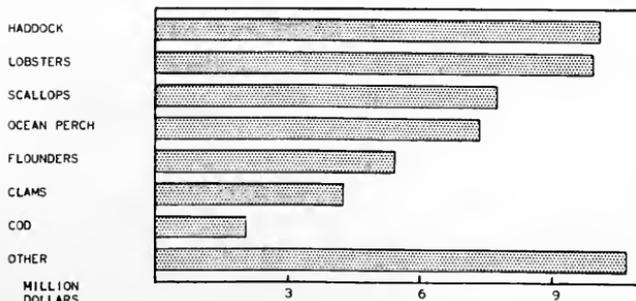

The Service appreciates the assistance of the following agencies in the collection of the data appearing in this section: the Maine Department of Sea and Shore Fisheries; the New Hampshire Fish and Game Department; the Massachusetts Department of Conservation, Division of Marine Fisheries; the Rhode Island Department of Agriculture and Conservation, Division of Fish and Game; and the Connecticut State Board of Fisheries and Game, and Shellfish Commission.

The following tables contain summarized and detailed information on the 1954 operating units and catch of the fisheries in the New England States. Condensed summary data on the operating units and catch by States of the New England States, appearing on the following pages, have been previously published in Current Fishery Statistics No. 1344. Historical data on the fisheries of the New England States may be found in Fishery Statistics of the United States, 1950 (Statistical Digest, No. 27).

HARPOONING SWORDFISH

LANDINGS OF FISHERY PRODUCTS AT CERTAIN MASSACHUSETTS PORTS,
1946 - 1954

LANDINGS AT MAINE PORTS

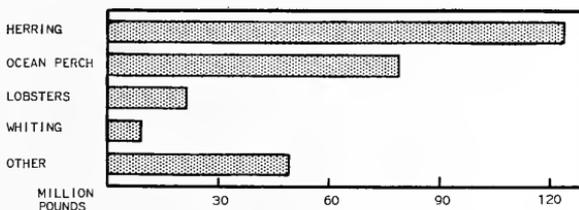

Landings of fishery products at Maine ports during 1954 amounted to nearly 244 million pounds valued at approximately 16.9 million dollars to the fishermen. This represented an increase of 42 million pounds or 18 percent in quantity and over 100 thousand dollars or less than 1 percent in value compared with 1953's landings. Receipts of herring (124 million pounds) were 23 million pounds above the yield of the previous year; herring, used principally in the canning of Maine sardines, accounted for 44 percent of the total poundage. Ocean perch landings (80 million pounds) also increased markedly during the year with the 1954 production more than 19 million pounds greater than 1953's harvest. Although lobsters (21.7 million pounds) accounted for only 8 percent of the total catch, this shellfish represented 48 percent of the total value, making it by far the most valuable item taken by Maine fishermen.

Landings at Portland, Maine, during 1954 totaled 68 million pounds valued at approximately 2.9 million dollars compared with more than 54 million pounds valued at 2.4 million dollars landed in 1953. Imports of fresh sea herring, used for canning, into the Maine and New Hampshire Customs District during the same period totaled 28 million pounds compared with 23 million pounds during the previous year.

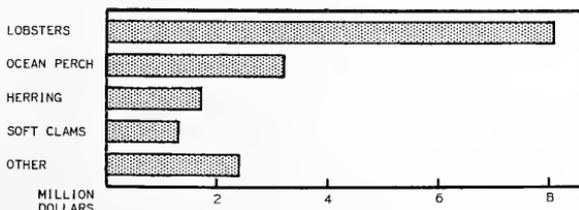

The quantities shown in the following tables represent the actual weights of the landings which have not been converted to round weight, therefore, the data are not directly comparable to the catch figures shown in the General Review, regional tables, or the Review of Certain Major Fisheries.

In cooperation with the Maine Department of Sea and Shore Fisheries, the Fish and Wildlife Service collects, compiles, and publishes monthly and annual data on the landings of fish and shellfish in Maine. This information is currently published in detail in Maine Landings which is in the Current Fishery Statistics series of reports issued by the Service. In addition to the individual monthly reports, two annual summaries were published in 1954, one listing the catch by months (Current Fishery Statistics No. 1117) and the other listing the catch by gear and by county (Current Fishery Statistics No. 1108).

✓ THE LANDINGS OF MENHADEN BY MONTHS ARE NOT AVAILABLE. THE ENTIRE CATCH FOR THE YEAR HAS BEEN LISTED UNDER JULY IN THIS TABLE.

LANDINGS AT CERTAIN MASSACHUSETTS PORTS

Because of their importance in the production of edible fishery products, detailed daily statistics are collected and published monthly for the landings at Boston, Gloucester, New Bedford, Provincetown, Massachusetts, and other Cape Cod ports. Landings by fishing craft of all sizes at the ports named are included in the data in the following tables.

The quantities shown in the following tables represent the actual weights of the landings which have not been converted to round weight, therefore, the data are not directly comparable to the catch figures shown in the General Review, regional tables, or the Review of Certain Major Fisheries.

During 1954, landings of fishery products by craft of all sizes at Boston, Gloucester, New Bedford, and on Cape Cod amounted to approximately 492 million pounds valued at over 31 million dollars to the fishermen. This represented an increase of over 42 million pounds or 9 percent in volume but a decrease of 2.1 million dollars or 6 percent in value compared with the 1953 landings. Ocean perch landings amounted to 102 million pounds in 1954 -- 8.5 million pounds more than the previous year's production. Massachusetts receipts of this species amounted to 128 million pounds in 1952 and 184 million pounds in 1951. The catch of scrod haddock (75 million pounds) rose markedly during the year and the 1954 production increased nearly 16 million pounds above that of the previous year. Landings of large haddock (55 million pounds) dropped approximately 3 million pounds during 1954. Scallop meats (6.6 million dollars) was the most valuable single fishery item produced in Massachusetts during 1954. Four items accounted for 64 percent of the total poundage landed at Massachusetts ports during the year: ocean perch, 21 percent; fish for reduction and animal food, 17 percent; scrod haddock, 15 percent; and large haddock, 11 percent.

Receipts at Gloucester accounted for 47 percent of the total poundage landed during the year and 26 percent of the total value; Boston was second in poundage with 31 percent of the total, but first, 35 percent, in value; New Bedford ranked third in poundage with 15 percent, but second, 33 percent, in value. Cape Cod was in fourth place in both categories with 7 percent in poundage and 6 percent in value.

The fishing fleet operating on the fishing banks of the North Atlantic and landing fares at Boston, Gloucester, New Bedford, and Cape Cod ports during 1954 numbered 762 craft of all sizes. The landings listed in the following tables, however, do not represent the entire catch of these vessels, as some of them also landed fares at other New England ports, at New York City, and at more southerly ports in connection with the shrimp, mackerel, and southern trawl fisheries.

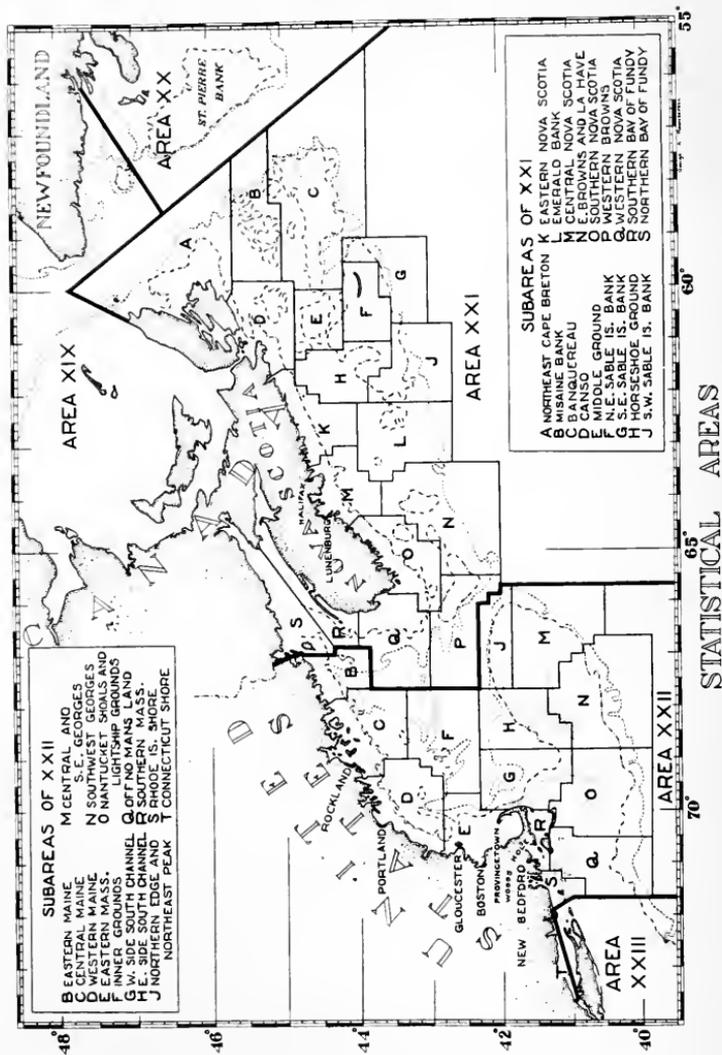

Of the total landings, 34 percent was caught by medium otter trawlers; 31 percent by large otter trawlers; 21 percent by small otter trawlers; 8 percent by purse seines; 3 percent by scallop dredges; and the remaining 3 percent by other types of gear.

The following tables contain a detailed summary of information on the landings of fish and shellfish by fishing craft of all sizes in Boston, Gloucester, New Bedford, and Cape Cod ports. Information on the annual landings by ports was previously published in Current Fishery Statistics No. 1134, while data on the landings by gear and area appeared in Current Fishery Statistics No. 1146. Detailed monthly information on the landings by port and by gear and area of capture was also published in the Current Fishery Statistics series.

NEW ENGLAND FISHERIES

There is shown on the following chart the statistical areas and subareas used in reporting the catch landed at certain Massachusetts ports.

EXCLUSIVE OF DUPLICATION.

NOTE:--THE ROMAN NUMERALS APPEARING IN THE ABOVE TABLE REFER TO THE NUMBERS GIVEN THOSE AREAS BY THE NORTH AMERICAN COUNCIL ON FISHERY INVESTIGATIONS.

SECTION 3 - MIDDLE ATLANTIC FISHERIES

The 1954 catch of fish and shellfish in the coastal areas of the Middle Atlantic States (New York, New Jersey, and Delaware) totaled nearly 887 million pounds valued at almost 31 million dollars to the fishermen. This production was a decrease of 77 million pounds or 8 percent below the production of the previous year, while the value reflected an increase of 430 thousand dollars or 1 percent compared with the 1953 value. Menhaden (782 million pounds) continued to be the major item in the Middle Atlantic region and the production of this item accounted for 88 percent of the total poundage and 36 percent of the total value of the 1954 catch. In the previous year, a record menhaden catch of 858 million pounds was landed in the three Middle Atlantic States.

The production of oyster meats dropped noticeably during 1954, with the harvest of this item slipping from 16.8 million pounds in 1952 to 14.5 million pounds in 1953 and 13.4 million pounds in 1954. Clam receipts also continued their downward trend during 1954, moving from a yield of 18.3 million pounds of meats in 1953 to 16.3 million pounds of meats in 1954. Although shellfish landings comprised only 4 percent of the total poundage, they accounted for 45 percent of the total value.

Scup or porgy landings (26 million pounds) approximated those of the previous year as did fluke (10 million pounds) and sea bass (6 million pounds).

The number of fishermen operating in the Middle Atlantic area dropped from 12,589 in 1953 to 9,569 in 1954. The number of craft of five-net tons and over operating in this region dropped from 688 in 1953 to 637 during 1954.

The hurricanes which hit the eastern seaboard in early September damaged shore installations and mauled equipment with unusually high winds and rough seas. Fish and crab pot fishermen were hardest hit, some losing large amounts of gear. Pound net operators also suffered heavy losses during these severe storms, and the fall fishery for many of the migratory species was hindered greatly by the gear destruction. It was generally felt that the production of some varieties would have been much greater had it not been for the destructive storms.

The fish pot fishery continued to operate successfully during the year and the catch by this gear held up unusually well considering the loss of gear due to storms. Purse seines were the most important gear used in the Middle Atlantic fisheries during the year. The large menhaden catch during 1954 was taken almost entirely by this effective gear. Other trawls, pound nets, and dredges also contributed noticeably to the total production.

New Jersey (434 million pounds) led the Middle Atlantic States in volume during 1954, accounting for 49 percent of the total catch. Delaware (315 million pounds) was in second place poundage-wise with 35 percent, followed by New York (138 million pounds) with 16 percent. The New Jersey fisheries were also the most valuable of the three states, amounting to 14.5 million dollars (47 percent); followed with New York, 8.2 million dollars (27 percent); and Delaware, 7.8 million dollars (26 percent).

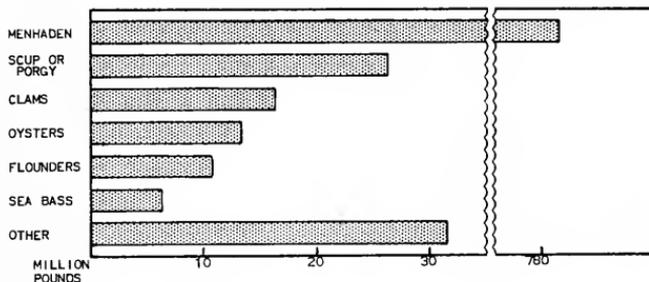

The Service appreciates the assistance of the following organizations in the collection of the data appearing in this section: the Bureau of Marine Fisheries, New York Conservation Department; the Division of Fish and Game and the Board of Shell Fisheries of the New Jersey Department of Conservation and Economic Development; and the University of Delaware Marine Research Laboratory and the Delaware Commission of Shell Fisheries.

MIDDLE ATLANTIC FISHERIES

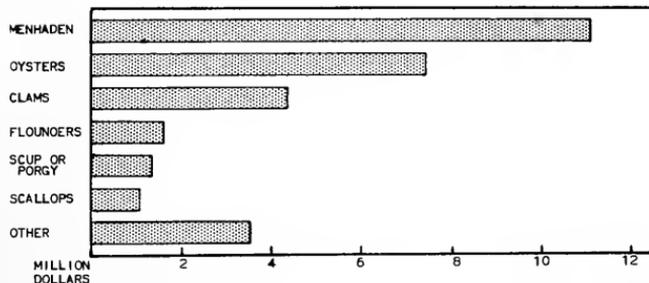

Condensed summary data of the operating units and catch by States of the fisheries of the Middle Atlantic area appearing on the following pages have been previously published in Current Fishery Statistics No. 1335. Historical data on the fisheries of the Middle Atlantic States may be found in *Fishery Statistics of the United States 1950*, Statistical Digest, No. 27. Additional publications containing the daily, monthly, and annual summaries of landings in this area are available from the Market News Service, 155 John Street, New York 38, New York.

CRAB TROTLINE IN OPERATION

MIDDLE ATLANTIC FISHERIES

HUDSON RIVER SHAD FISHERY

During 1954, there were 391 fishermen employed in the Hudson River shad fishery. These fishermen marketed more than 1,249,000 pounds of shad valued at \$165,000. This production was an increase of 311,000 pounds or 33 percent in volume and 9.3 thousand dollars or 6 percent in value compared with the previous year's catch. The average price per pound received by fishermen in 1954 was 13.2 cents compared with 16.6 cents in 1953 and 13.6 cents in 1952.

During 1954, the shad taken in the River averaged 3.59 pounds per fish -- only slightly less than the average of 3.60 pounds per fish harvested in the Hudson in the previous year.

Statistics on the operating units and catch of shad in the Hudson River for 1954 by New York and New Jersey fishermen are also included in the operating unit and catch data for the States.

NOTE:--THE PRODUCTION IN THE ABOVE TABLE REPRESENTS THE CATCH OF SHAD IN THE HUDSON RIVER BETWEEN WEEHAWKEN, NEW JERSEY, AND ALBANY, NEW YORK.

SECTION 4 - CHESAPEAKE FISHERIES

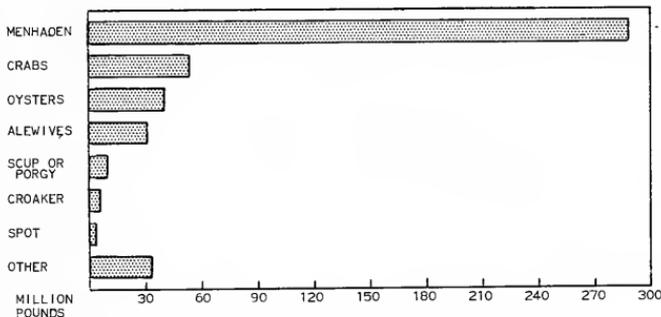

The catch of fishery products in the Chesapeake States (Maryland and Virginia) in 1954 totaled nearly 473 million pounds valued at approximately 32 million dollars to the fishermen. This was an increase of 130 million pounds or 38 percent in volume and 5.5 million dollars or 21 percent in value compared with the landings of the previous year. An increase of nearly 127 million pounds in menhaden landings was mainly responsible for the marked increase in the 1954 production. The yield of oyster meats continued to rise during the year and amounted to nearly 42 million pounds, compared with 37 million pounds in 1953 and 34 million pounds in 1952. Crab production (55 million pounds) dropped nearly 9 million pounds during the year.

The catch of croakers, once a mainstay of the Chesapeake fisheries, recorded an increase of 33 percent during the year with a production of over 6 million pounds compared with 4.5 million pounds for 1953. The 1952 production of this species was the lowest reported for any year for which data are available. The croaker catch record was established in 1945 when nearly 58 million pounds were landed in the two Chesapeake States.

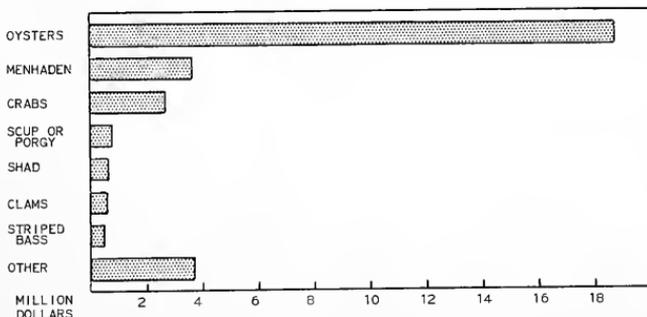

The Service acknowledges and is grateful for the assistance of the following organizations in the collection of the data appearing in this section: the Chesapeake Biological Laboratory, Maryland Department of Tidewater Fisheries, the Virginia Fisheries Laboratory, and the Virginia Commission of Fisheries.

Condensed summary data of the operating units and catch by States of the fisheries of the Chesapeake area appearing on the following pages have been previously published in Current Fishery Statistics No. 1321. Data on the bay and ocean areas of Maryland and Virginia are shown at the end of this section. Additional data on the daily, monthly, and annual landings of fishery products in these areas are available in reports published by the Service's Fishery Market News Service office at Hampton, Virginia.

POTOMAC RIVER SHAD AND ALEWIFE FISHERY

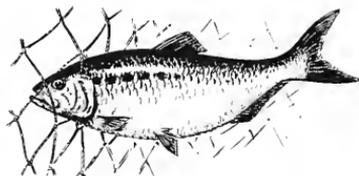

The catch of shad in the Potomac River during 1954 amounted to 234 thousand fish weighing 697 thousand pounds and valued at 121 thousand dollars to the fishermen. The take of alewives in the Potomac for the same year was 27 million fish weighing over 13 million pounds, valued at 161 thousand dollars.

Compared with 1953, the poundage of shad decreased 18 percent while the value dropped 13 percent. Alewives registered an increase of 17 percent in poundage but decreased 10 percent in value compared with the landings of the previous year. A total of 499 fishermen were employed in this fishery, 82 less than the number fishing during the previous year.

Statistics on the yield and operating units of shad and alewives in the Potomac River are also included in the catch and operating unit data for Virginia and Maryland.

SECTION 5 - SOUTH ATLANTIC FISHERIES

During 1954, the commercial catch of fish and shellfish in the coastal areas of the South Atlantic States (North Carolina, South Carolina, Georgia, and the East Coast of Florida) including the commercial catch from the inland lakes of Florida, amounted to 326 million pounds valued at nearly 18 million dollars. Compared with the previous year, the quantity landed was about the same but the total value dropped 2.6 million dollars or 13 percent. Menhaden (206 million pounds) exceeded the combined catch of all other species, while shrimp (29 million pounds) was valued at nearly 7 million dollars and led all other species in this category.

A total of 16,150 fishermen operated in the South Atlantic area during 1954 compared with 14,319 fishermen in 1953 and 14,241 in 1952. There were 961 fishing vessels of five-net tons and over operating in this area in 1954 compared with 1,051 in 1953 and 1,054 in 1952. Nearly 7,000 small craft were also employed in commercial-fishing operations during the year.

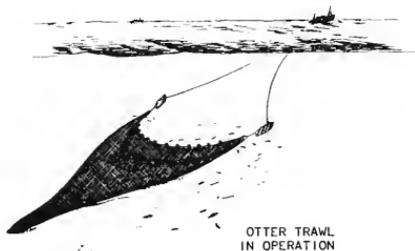

During 1954, the South Atlantic menhaden fishery yielded a catch of 206 million pounds compared with 199 million pounds in the previous year. It was felt by the fishermen that menhaden production would have been considerably greater had the weather been more favorable. Inclement weather continued throughout the year and included three disastrous hurricanes -- the last of which, in North Carolina alone, caused an estimated 1.5 million dollars in damage to fishery installations. The unusually highly-productive fall beach fishery was badly disrupted by the storm and in some areas complete equipment losses were reported.

Oyster production was down over 200 thousand pounds compared with the previous year, and this decline was attributed mainly to storm damage. In August 1953, a hurricane caused a high mortality on the oyster beds and in October 1954, another severe hurricane caused similar damage. Due to a good demand at the shucking plants for available oysters during the fall season, the price paid for shell oysters during 1954 was higher than usual. Production of clams in the South Atlantic States dropped to approximately one-half that of the previous year, partly as a result of storm damage. A decrease in demand and price for clams in certain areas also contributed to the curtailment of clamming operations. The catch of hard crabs (30 million pounds) was approximately the same as that of the previous year and the value was nearly the same. Hard crabs were apparently in good supply and readily available to the crabbers in 1954, however, a poor market restricted fishing effort. This market factor may have been a more effective regulator of production than was abundance.

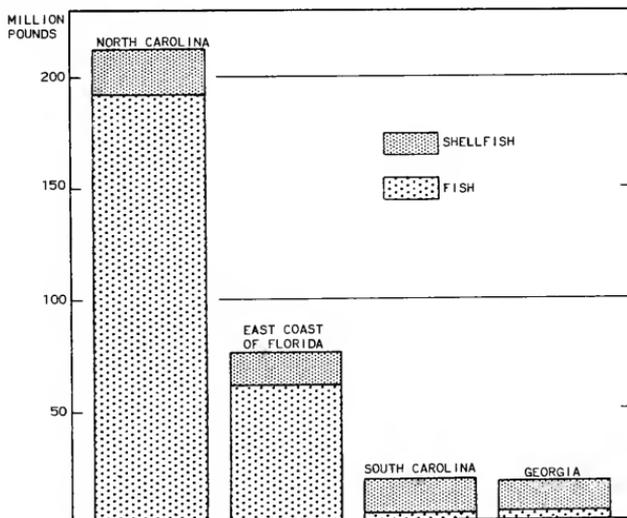

In contrast to the early and marked success of the 1953 season, the 1954 South Atlantic shrimp fishery got off to a slow start but accelerated considerably during the last six months of the year. Although the year's production was more than 4 million pounds below that of the previous year, it was still above the average for recent years. The 1954 production appeared to have been more successful compared with the years prior to 1953. Shrimp averaged only 24 cents per pound in 1954 compared with a 30-cent average in 1953.

The Service gratefully acknowledges the assistance of the following organizations in the collection of the data appearing in this section: The Division of Commercial Fisheries, North Carolina Department of Conservation and Development; the Division of Commercial Fisheries, South Carolina Wildlife Resources Department; the Coastal Fisheries Division, Georgia Game and Fish Commission; and the Florida State Board of Conservation and the Marine Laboratory, University of Miami.

Condensed summary data of the operating units and catch by States of the fisheries of the South Atlantic area appearing on the following pages have been previously published in Current Fishery Statistics No. 1375. Data are also shown in this section for the West Coast of Florida and the entire State of Florida, although these data are not included in the total catch and operating unit data for the South Atlantic Section. Additional specific data on many aspects of the South Atlantic fisheries may be found in the daily, monthly, and annual reports published by the Hampton, Virginia, Market News Office of the Fish and Wildlife Service.

SECTION 6 - GULF FISHERIES

Fish and shellfish caught and landed by United States fishermen during 1954 at fishing ports of the States bordering the Gulf of Mexico (West Coast of Florida, Alabama, Mississippi, Louisiana, and Texas) totaled approximately 755 million pounds valued at nearly 73 million dollars to the fishermen. This catch was a decrease of 4.7 million pounds or 1 percent in volume and 12.6 million dollars or 15 percent in value compared with the previous year's production. Menhaden (401 million pounds) comprised 53 percent of the total landings but only 7 percent of the total value. Shrimp receipts (237 million pounds) accounted for 31 percent of the total poundage and 74 percent of the total value.

Economically the shrimp industry in the Gulf was confronted with precarious financial problems during 1954. This resulted primarily from substantially lower shrimp prices than in 1953 with no reduction in labor costs, supplies, and operating materials. In some cases, operating costs were increased. By midyear, trawler owners who had purchased vessels on short-term loans during the period of high shrimp prices, were unable to make operating expenses and meet current payments on their vessels. During the last half of 1954, trawler crews were reduced in some instances and vessel maintenance and repair cut to a minimum in an effort to reduce expenditures. An expansion of advertising programs to increase the consumption of shrimp was also considered in an attempt to strengthen shrimp prices.

The high rate of vessel construction, mostly shrimp trawlers, on the Gulf Coast in 1953, continued into early 1954. The backlog of contracts for vessel construction early in 1954 was appreciably reduced when potential owners of new vessels began canceling orders by late February and March 1954. Vessels of five-net tons and over (new and converted) documented as commercial fishing craft for the first time with home ports on the Gulf Coast, averaged over 30 per month during January - July and slightly over 10 each month in August - December 1954. Total new registrations for the Gulf Coast were 313 in 1954 and 264 in the previous year; 44 percent and 36 percent of the total newly documented commercial fishing vessels throughout the United States in 1954 and 1953 respectively. Several fishing vessels, mainly from the North Atlantic area, were actively engaged in shrimp fishing in the Gulf during 1954.

Price disputes between fishermen and dealers did not significantly reduce fishing operations during the year, nor did weather conditions materially affect fishing in this period. However, a storm off lower Texas and the North Mexican Coast in early June did a moderate amount of damage to fishing vessels. During 1954, small-craft warnings were hoisted over major sections of the Gulf Coast 27 times for a total of 43 days compared with warnings being up on 34 occasions for a period of about 52 days in the previous year.

Exploratory fishing operations by the Fish and Wildlife Service vessel *Oregon*, based at Pascagoula, Mississippi, included for the first time appreciable catches of yellowfin tuna taken by long lines in the Gulf of Mexico. These catches were made during the first eight months of 1954. The importance of this discovery was indicated by the fact that converted long-line vessels began fishing for yellowfin tuna. Almost the entire commercial catch (15 thousand pounds) of this tuna was utilized by a canning plant in Puerto Rico.

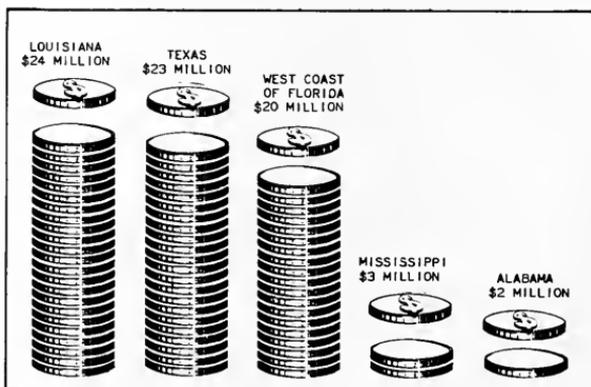

Data covering sales of sponges at the Tarpon Springs Sponge Exchange which were published in this section prior to 1951, have been omitted because of a decline in the importance of this fishery. Information on the catch and value of the sponge fishery in the Gulf for 1954 is listed in the catch tables of this section.

The Service acknowledges the assistance of the following organizations in the collection of the data appearing in this section: The Florida State Board of Conservation and the Marine Laboratory, University of Miami; the Alabama Department of Conservation, Game and Fish Division; the Mississippi Seafood Commission; the Louisiana Wild Life and Fisheries Commission; and the Texas Game and Fish Commission.

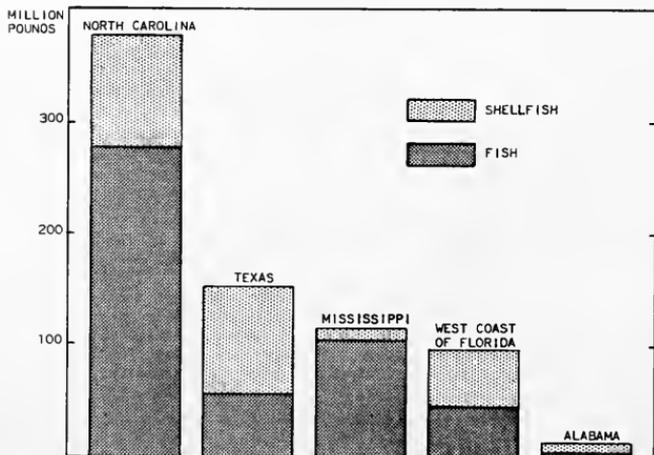

GULF FISHERIES

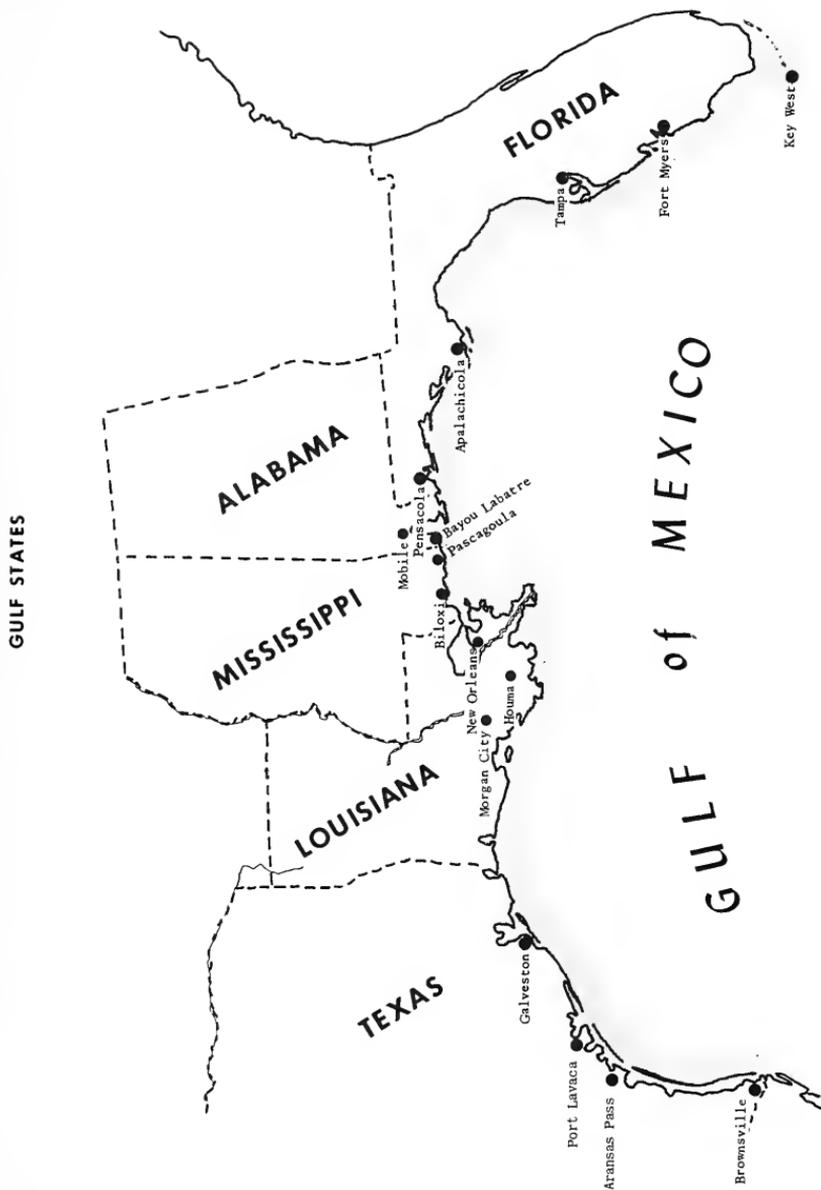

Condensed summary data of the operating units and catch by States of the Gulf Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 1374. Additional specific data on several of the major fisheries of the Gulf States may be found in Section 12 of this publication. Data on the catch and operating units of the East Coast of Florida and of the entire State of Florida may be found in Section 5 of this Digest.

SECTION 7 - PACIFIC COAST STATES FISHERIES

During 1954, the production of fish and shellfish in the Pacific Coast States (Washington, Oregon, and California) amounted to 826 million pounds valued at more than 96 million dollars to the fishermen. This was an increase of approximately 92 million pounds or 13 percent in quantity and 12 million dollars or 14 percent in value compared with 1953. California (622 million pounds) accounted for 75 percent of the Pacific Coast States production during 1954 followed by Washington (160 million pounds) with 20 percent and Oregon (44 million pounds) with 5 percent.

One of the highlights of the 1954 salmon season in the Pacific Coast States was the success of the rehabilitated Fraser River sockeye salmon run. This fishery dominated the canned salmon pack on Puget Sound before 1914. During that year, a slide at Hell's Gate on the Fraser River in British Columbia practically destroyed the run and greatly affected the movements of future runs of salmon up the Fraser at nearly all stages of flow. The fishery was revived beyond expectations during 1954, mainly through the efforts of the International Pacific Salmon Fisheries Commission. This organization, in 1949, constructed a fishway which bypassed the obstruction and permitted a normal escapement to the spawning lakes above Hell's Gate for the first time since 1914. During 1954, fishermen engaged in the Fraser River fishery on both sides of the International Boundary reported the unusual actions of the rejuvenated sockeye run. In 1954, the fish approached the spawning grounds differently than in the years prior to 1914, bypassing the former areas of concentration and traveling almost directly from the sea to the river. According to observers, nearly the entire escapement upstream occurred in two days instead of the usual week or so. This condition necessitated an entirely new strategy in the operation of the gear used in making the catch. However, nylon netting and the new drum-seine operation for purse-seine boats immeasurably assisted both the United States and Canadian fishermen. During 1954, the Puget Sound catch of sockeye salmon totaled nearly 35 million pounds compared with over 12 million pounds in 1953. In Puget Sound, where pink salmon are taken in quantity only in the odd-numbered years, the 1954 catch of this species amounted to less than two thousand pounds compared with 34 million pounds in the previous year.

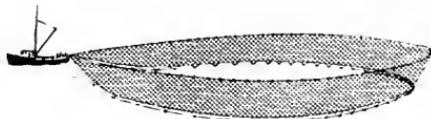

In a sharp reversal of the 1953 Pacific sardine failure, the 1954 fishery in Southern California experienced a remarkable comeback. The 1954 catch of nearly 137 million pounds was a significant recovery from the 9 million-pound catch of the previous year. However, the 1954 production was only 42 percent of the 1951 catch of nearly 329 million pounds. The 1954 harvest of Pacific sardines probably could have been materially increased had not the start of the fishery in Southern California been delayed until late October due to price disputes. When the fishery did get underway, seiners were placed on a nightly limit of about one-half of their capacity during the latter part of October and November. Again the sardine fishery was concentrated in Southern California, with receipts at Monterey being trucked from the Port Hueneme-Santa Barbara area.

As in the two previous years, tuna ex-vessel price contracts were settled early in January 1954 with both the purse-seine and bait-boat fleets. However, the 1954 tuna prices were increased by 30 dollars a ton over 1953 for bluefin (to 340 dollars), skipjack (to 310 dollars), and yellowfin (to 350 dollars)--record high ex-vessel prices for these species. These prices held until mid-August when a 30 dollar-a-ton price cut was announced by the packers. After considerable discussion, during which fishing continued, a compromise price reduction of 20 dollars-a-ton was reached. These prices remained in effect for the balance of the year. The albacore ex-vessel price was steady at 410 dollars during the entire season. Also in 1954, a tuna mothership operation was conducted for the first time in California. The refrigerated freighter *Alaska Reefer*, with a capacity of 800 tons of frozen fish was employed for this purpose. This vessel accompanied four tuna purse seiners to the grounds off South America in early January, a distance of over 3000 miles each way. As tuna purse seiners have an average carrying capacity of less than 150 tons, the mothership permitted each seiner to make two deliveries on the fishing grounds and return to San Pedro with the third trip in little more time than was required for one fishing trip from this port. This enterprise was considered to have been unusually successful with the mothership being loaded in less than one month's fishing time.

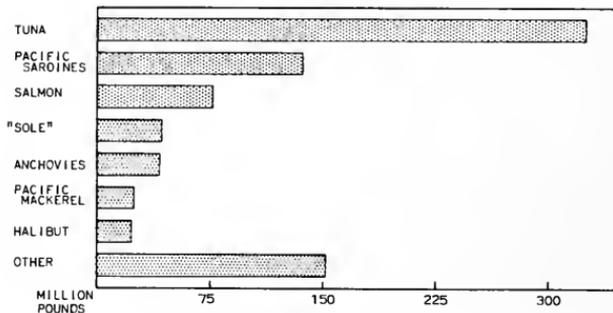

PACIFIC COAST STATES FISHERIES

The Service appreciates the assistance of the following organizations in the collection of the data appearing in this section: The Washington Department of Fisheries; the Oregon Fish Commission; and the California Department of Fish and Game.

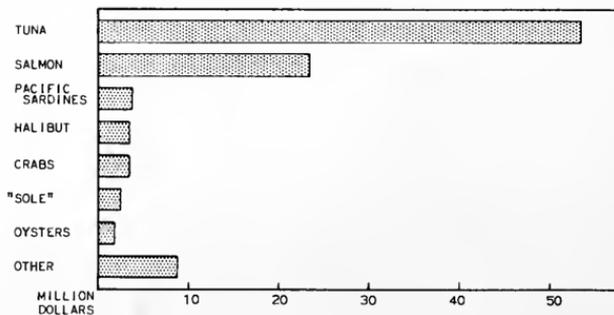

Condensed summary data of the operating units and catch by States of the Pacific Coast States Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics, No. 1366. Additional specific data on several of the major fisheries of the Pacific Coast States may be found in Section 12 of this publication.

^{1/} INCLUDES THE CATCH TAKEN OFF LATIN AMERICA. WEIGHTS OF FINFISH REPRESENT LANDED WEIGHTS.
^{2/} LESS THAN 500 POUNDS OR 500 DOLLARS.
^{3/} IN THE CALIFORNIA CATCH GRAYFISH ARE INCLUDED WITH SHARKS.

NOTE:--DATA ON THE VOLUME OF FISH LANDED IN CALIFORNIA ARE SHOWN IN WEIGHTS AS LANDED. STATISTICS FOR WASHINGTON AND OREGON ARE SHOWN IN ROUND WEIGHT.
 THE WEIGHT OF HALIBUT SHOWN IS THE ROUND WEIGHT OF THE CATCH; THE MARKETED WEIGHT WAS CONVERTED TO ROUND WEIGHT BY MULTIPLYING BY 1.33. THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDES 654,224 POUNDS OF FISH LIVERS AND 53,624 POUNDS VALUED AT \$12,409; HALIBUT LIVERS, 231,629 POUNDS VALUED AT \$49,774; LINGCOD LIVERS, 34,315 POUNDS VALUED AT \$11,118; SOUFFIN SHARK LIVERS, 4,502 POUNDS VALUED AT \$6,051; OTHER SHARK LIVERS, 3,003 POUNDS VALUED AT \$151; AND HALIBUT AND SABLEFISH VISCERA, 197,209 POUNDS VALUED AT \$25,904. THE CATCH OF GRAYFISH AND SHARKS WAS CALCULATED FROM THE LANDINGS OF LIVERS ON THE BASIS THAT THEY REPRESENTED 12 PERCENT OF THE TOTAL WEIGHT OF THESE FISH. MOST OF THE CARCASSES WERE DISCARDED AT SEA AFTER REMOVAL OF THE LIVERS.

A PORTION OF THE TUNA CATCH TAKEN OFF LATIN AMERICA BY UNITED STATES FISHERMEN WHICH IS INCLUDED IN THIS TABLE MAY ALSO BE INCLUDED IN UNITED STATES IMPORT STATISTICS.

1/ THE SALMON CAUGHT BY HAUL SEINES WERE TAKEN ON INDIAN RESERVATIONS.

2/ FISHED ONLY ON INDIAN RESERVATIONS.

3/ THE POUNDAGE SHOWN INCLUDES THE TOTAL VOLUME OF GRAYFISH TAKEN. MOST OF THE CARCASSES WERE DISCARDED AT SEA.

4/ BASED ON AN AVERAGE OF 24 POUNDS PER DOZEN.

5/ BASED ON A YIELD OF 25 PERCENT MEATS.

6/ BASED ON A YIELD OF 42 PERCENT EDIBLE MEATS.

7/ BASED ON A YIELD OF 12 PERCENT MEATS.

NOTE:--THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS: GRAYFISH LIVERS, 390 POUNDS, VALUED AT \$58.

PACIFIC COAST STATES FISHERIES

LANDINGS BY HALIBUT FLEET AT SEATTLE, WASHINGTON

During 1954, landings of halibut, lingcod, rockfishes, and sablefish at Seattle, Washington, by the United States halibut fleet amounted to 18.5 million pounds valued at approximately 3.5 million dollars to the fishermen. In addition, a total of 1.2 million pounds of assorted fish livers and viscera, valued at 468 thousand dollars was landed by these vessels. The combined landings were 29 percent greater in volume and 44 percent greater in value compared with the 1953 landings.

A summary of the 1954 landings at Seattle by the United States halibut fleet is contained in the following tables. These landings represent the dressed weight of the catch and are not directly comparable with the data contained in the sectional and State catch tables. For additional information on the Pacific Coast halibut fishery, the reader is referred to Section 12 of this publication, Review of Certain Major Fisheries.

1/ IN ADDITION VESSELS OF THE SEATTLE HALIBUT FLEET LANDED THE FOLLOWING QUANTITIES OF FISH LIVERS AND VISCERA: HALIBUT AND VISCERA, 1,073,519 POUNDS VALUED AT \$429,407; LINGCOD AND VISCERA, 14,360 POUNDS VALUED AT \$6,462; SABLEFISH AND VISCERA, 124,550 POUNDS VALUED AT \$31,138; AND ROCKFISHES AND VISCERA, 7,020 POUNDS VALUED AT \$1,404.

NOTE--THE 1954 PACIFIC HALIBUT SEASON OPENED MAY 16 IN AREAS 1A, 1B, 2, 3A, AND 3B. AREA 1A CLOSED SEPTEMBER 9. THE FIRST SEASONS IN AREAS 1B AND 2 CLOSED TO REGULAR HALIBUT FISHING ON JUNE 5, AND IN AREAS 3A AND 3B ON JULY 12. THE SECOND SEASON IN AREAS 1B, 2, 3A, AND 3B OPENED AUGUST 1 AND CLOSED AUGUST 8 IN AREAS 1B AND 2, AND AUGUST 10 IN AREAS 3A AND 3B. THE THIRD SEASON IN AREA 3B OPENED AUGUST 16 AND CLOSED SEPTEMBER 9.

SECTION 8 - LAKE FISHERIES

The United States and Canadian catch of fishery products in the Great Lakes, Lake Saint Clair, and the International Lakes during 1954 amounted to nearly 125 million pounds. The United States portion of this total amounted to more than 81 million pounds while Canadian fishermen accounted for over 43 million pounds. The value of the United States production in the Great Lakes during 1954 amounted to nearly 10 million dollars. The 1954 United States production in the Great Lakes represented an increase of 402 thousand dollars or 4 percent in value compared with the landings of the previous year. Michigan led all other States in production with a catch of more than 27 million pounds, followed by Ohio with 23.4 million pounds and Wisconsin with 20.9 million pounds. Lake Erie was the leading producer, with United States fishermen taking 28 million pounds and Canadian fishermen 29 million pounds. Lake Michigan was second in production with over 30 million pounds, the entire amount being taken by United States fishermen.

It was possible to conduct a survey of the fishing gear used and fishermen employed in the Great Lakes for 1954. This was the third survey of this type in this area since 1940. During 1954, there were 4,452 men employed in the Lakes fisheries compared with 4,841 in 1950 and 5,142 in 1940. Vessels of five-net tons and over amounted to 654 during 1954, 661 in 1950, and 499 in 1940. The number of small boats which rose from 1,785 in 1940 to 1,810 in 1950, dropped to 1,746 during 1954. Several factors are believed to have been mainly responsible for the wide fluctuations in nearly all segments of the Great Lakes commercial fishing industry. Among these, the lowered catches of certain commercially-important species and a general trend away from the fisheries into new industries were most important.

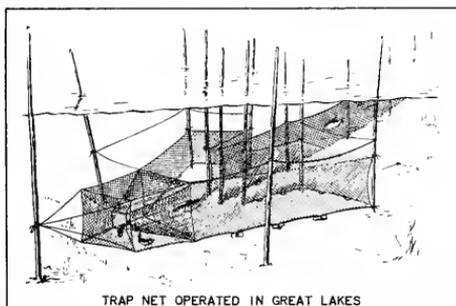

The 1954 lake trout and whitefish production in the Great Lakes followed a pattern similar to that of recent years. The gradual and steady diminution in yearly catches of these species was more pronounced for lake trout as the catch of this species has declined each year since 1951. The lake trout catch for 1954 by American fishermen was 23 percent lower than in 1951 and amounted to less than 2.3 million pounds during 1954 compared with 2.4 million pounds during 1953. This was the lowest production of this species since records first became available in 1885. The trend was generally the same for whitefish with the exception of 1952 which was an unusually good year for whitefish in the Great Lakes. Production of this species during 1952 was substantially greater in both Lake Michigan and Lake Erie, each of which yielded approximately one-half million pounds more than in the previous year. Catches of whitefish for each of the two years following the reasonably successful 1952 catch reverted to the declining trend that had been of increasing concern for the future of these two commercially important species.

The drop in Lake trout production was believed to have been mainly due to the predatory habits of the sea lamprey. The Branch of Fishery Biology of the Fish and Wildlife Service again focused its attention on the control of this parasite, and in 1954 through an expanded program, placed 44 electrical barriers in operation on known and potential lamprey spawning streams along the Lake Superior shoreline in Michigan. Records indicated an even greater abundance of lampreys in Eastern Lake Superior in 1954 than in 1953; however, results from operations of newly installed devices in Central Lake Superior were more encouraging. No lampreys were taken in 22 out of 28 barriers west of Marquette, Michigan, which appeared to indicate that they may not yet be firmly established in the central and western areas. Screening of chemical compounds continued during 1954, and after checking nearly 4,000 types, a specific larvicide had not been found. However, several substances of sufficient promise were found to warrant more detailed investigation and field testing.

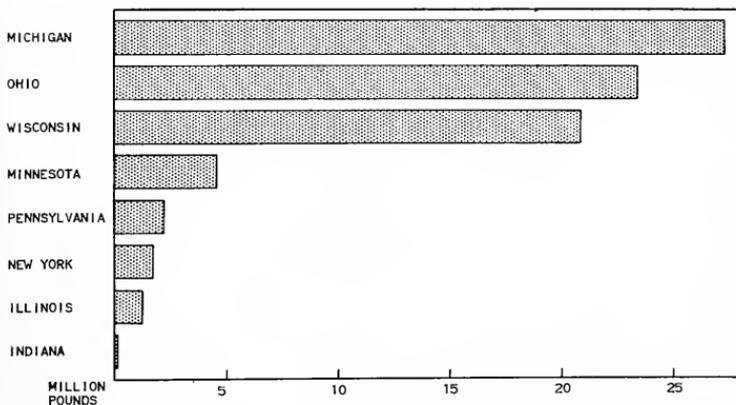

In May 1954, the research vessel *Cisco* started a fishery and limnological survey of central and southern Lake Michigan. The principal objectives of the work was an appraisal of the status of the chub population; development of efficient, economical methods for large-scale production of chubs; and the collection of data on limnological conditions affecting productivity.

Much of the data in this section were assembled and prepared for publication by the Service's Branches of Fishery Biology and Commercial Fisheries from information collected by the following agencies: Dominion Bureau of Statistics of Canada; Illinois Department of Conservation; Indiana Department of Conservation, Division of Fish and Game; Michigan Department of Conservation; Minnesota Department of Conservation; New York State Conservation Department, Division of Fish and Game; Ohio Department of Natural Resources, Bureau of Fish Management and Propagation; Pennsylvania Fish Commission; and the Wisconsin Conservation Department. Supplementary information was collected by the Branch of Commercial Fisheries.

Condensed summary data of the operating units and catch by States of the Great Lakes Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics, No. 1362. Additional specific data on many aspects of the Great Lakes Fisheries may be found in the daily, monthly, and annual reports published by the Service's Chicago Market News Office.

CATCH OF LAKE TROUT, 1934 - 1954

SECTION 9 - MISSISSIPPI RIVER FISHERIES

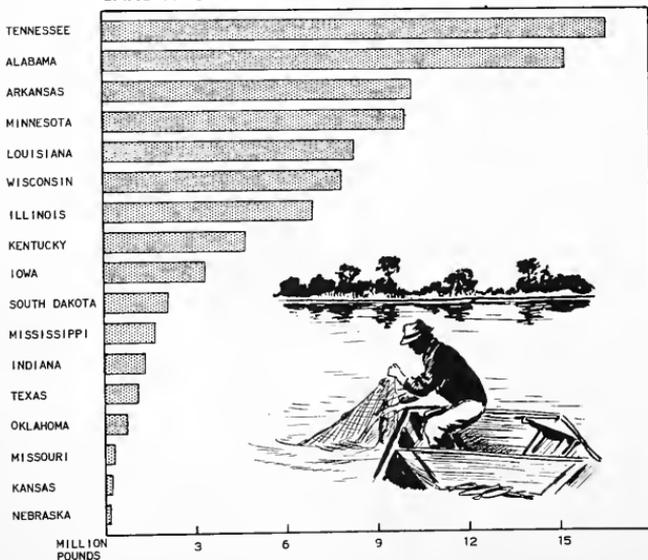

This section contains data on the operating units, fishermen employed, and the catch by States for 17 States in the extensive Mississippi River drainage area for 1954. This is the first complete general survey of the Mississippi River and its tributaries since 1950. During 1954, 13,599 fishermen were employed in this area compared with 19,197 in 1950. In this same period, the catch dropped from 103 million pounds valued at 10.1 million dollars in 1950 to 90 million pounds valued at approximately 7.9 million dollars in 1954. This represented a decrease of 12.9 million pounds or 12 percent in quantity and 2.2 million dollars or 22 percent in value compared with the landings of the previous year. Several factors are believed to have contributed to the marked decrease during the four-year period. Among these, a general drought throughout much of this area curtailed fishing operations in certain sections; a drift away from commercial fishing into the new industries opening up along the Mississippi River and tributary streams; and increased pollution from the new plants were probably the most important.

Rough fish (carp, buffalofish, bullheads, garfish, and quillback) taken as a result of lake and stream management programs and the fishermen and gear employed in taking these fish, have been included in the catch data appearing in this section. Although in many cases these fish were not taken by commercial fishermen, they were marketed through commercial channels. In some States, the rough fish comprised a majority of the catch.

The Service acknowledges and is grateful for the assistance of the following organizations in the collection of the data appearing in this section: Alabama Division of Game and Fish; Arkansas Game and Fish Commission; Illinois Department of Conservation; Indiana Department of Conservation; Iowa State Conservation Commission; Kansas Forestry, Fish and Game Commission; Kentucky Department of Fish and Wildlife Resources; Louisiana Wild Life and Fisheries Commission; Minnesota Department of Conservation; Mississippi Game and Fish Commission; Missouri Conservation Commission; Nebraska Game, Forestation, and Parks Commission; Oklahoma Game and Fish Department; South Dakota Department of Game, Fish, and Parks; Tennessee Game and Fish Commission; Texas Game and Fish Commission; and the Wisconsin Conservation Department.

Condensed summary data of the operating units and catch by States of the Mississippi River Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 1337.

SECTION 10 - ALASKA FISHERIES

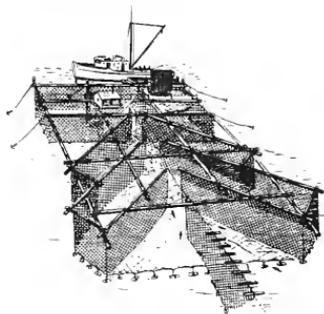

The commercial catch of fishery products in Alaska during 1954 totaled 338 million pounds valued at over \$31 million. This was an increase of 41 million pounds or 14 percent in quantity and \$4.8 million or 18 percent in value compared with the 1953 production.

Canned salmon production in Alaska during 1954 varied greatly within the Territory, ranging from excellent in some areas to poor in others. The total 1954 Alaska canned salmon pack (exclusive of freezership salmon canned in the United States) totaled nearly 3.1 million standard cases, 8 percent greater than the 1953 pack of almost 2.9 million cases. The value of this item rose noticeably during 1954, climbing from \$58.2 million in 1953 to \$63.4 in 1954; an increase of 9 percent during the latter year. The 1954 Central Alaska canned salmon pack gained 3 percent over the production of the previous year, with chum, pink, and red salmon showing gains, and king and silver salmon registering declines. Southeastern Alaska recorded a 33 percent gain during the year with marked increases in the packs of both chum and pink salmon. The Western Alaska canned salmon pack was 26 percent below 1953, chiefly because of a 31 percent drop in the pack of red salmon. The Bristol Bay Area suffered most during the 1954 season due to an off-cycle year and a large reduction in fishing effort. The Fish and Wildlife Service imposed strict conservation measures in Bristol Bay to help rehabilitate this fishery which has steadily declined for the past several years. The Naknek-Kvickak District, which normally contributes the bulk of the Bristol Bay salmon pack, suffered an unusually poor season with production falling far below expectations. However, the Ugashik District experienced a good run, preventing the Bristol Bay season from becoming even worse. In Central Alaska, the Kodiak District contributed more to the 1954 Alaska canned salmon pack than in any year since 1947, with an unusually good pink and chum salmon pack. Cook Inlet experienced an outstanding season and came within 38 thousand cases of the record 1950 pack for this area of 420 thousand cases. Cooper River also attained the second highest canned salmon pack in its history, exceeded only by 1952 (140 thousand cases in 1954, 146 thousand cases in 1952). Comparing the 1954 Alaska canned salmon pack by species with that for 1954, will show that gains were registered for chum salmon (27 percent), pink salmon (20 percent), and silver salmon (31 percent); and that losses were shown for king salmon (9 percent) and red salmon (22 percent). Of the total pack canned in Alaska, Central Alaska furnished 45 percent; Southeastern Alaska, 42 percent; and Western Alaska the remaining 13 percent. The 1954 freezership fleet in Alaska consisted of 10 vessels, compared with 8 in 1953, 18 in 1952, and 9 in 1951. Although most of the fish taken by this fleet are normally canned on Puget Sound, considerable quantities were canned in Alaska. In 1954, freezership salmon frozen in Alaska and canned on Puget Sound totaled 112 thousand cases; while freezership salmon canned in Alaska totaled 77 thousand cases.

During the year, biological research centered on pink salmon in Southeastern Alaska, red salmon in the Cook Inlet, Kodiak, and Bristol Bay Areas, and herring in Southeastern Alaska and Prince William Sound. Conditions affecting the productivity and survival of pink and red salmon were of primary concern, while limited research on herring provided information as to the age composition of the catch and condition of the populations.

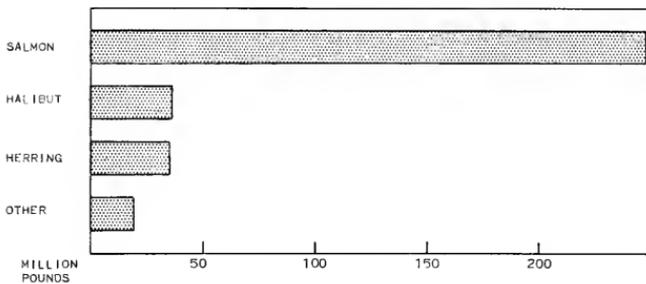

Explorations in the Prince William Sound Area of Alaska for bottomfish and shellfish were conducted by the Service's exploratory fishing vessel John N. Cobb during two periods in 1954. Gear used during the first period (February 26 to April 6) included both otter and beam trawls. Gear used during the second period (July 13 to September 8) included, in addition to the gear used in the spring, king-crab pots and shrimp traps. Commercial quantities of Pacific Ocean perch and sablefish were taken in otter-trawl drags in the offshore waters adjacent to Prince William Sound during the second period. The best catches of Pacific ocean perch were made in the vicinity of Middleton Island and south of Point Elrington. The best catches of sablefish were also made in this locality. Starry flounders were taken in amounts up to 1,800 pounds per drag from near Cape Hinchinbrook to off Cottonwood Point. Otter-trawl drags in Prince William Sound proper during both periods caught only small amounts of commercially-desirable species of bottomfish. King-crab catches were also small. Favorable shrimp catches were made by beam trawl in Orca Bay, Port Gravina, and Montague Strait during the second period. Only a few shrimp were taken by traps. The best results with king-crab pots were obtained in College Fiord and Esther Passage.

Statistics on the fisheries of Alaska were collected and compiled by the Branch of Alaska Fisheries of the Service. The information contained in the following tables has previously been published in Current Fishery Statistics No. 1165. Detailed information regarding the Alaska fisheries for 1954 may be found in Statistical Digest No. 37, entitled Alaska Fishery and Fur-Seal Industries, 1954.

NOTE:--THE SALMON CATCH IS REPORTED IN NUMBERS OF FISH; ESTIMATED ROUND WEIGHTS ARE SHOWN IN THE CATCH TABLES.

ALASKA SALMON PRODUCTION, 1935 - 1954

SECTION 11 - HAWAIIAN FISHERIES

The following tabulations of the catch of fish and shellfish in the Territory of Hawaii have been compiled from monthly reports submitted by the Board of Commissioners of Agriculture and Forestry of the Territory of Hawaii, Division of Fish and Game. The catch listed has not been included in the tabulations of the catch of the United States and Alaska listed in the General Review or Review of Certain Major Fisheries.

REVIEW OF CERTAIN MAJOR FISHERIES

There are presented in this section of the Digest complete data on the catch of certain of the major species of fish and shellfish taken commercially in the United States and Alaska. Although these data are included in the detailed catch tables of the various states, they have been republished in individual fishery tables in this portion of the report to provide readers with a single source of catch data for cod, haddock, halibut, Atlantic and Pacific mackerel, menhaden, Atlantic ocean perch, Pacific sardine, salmon, tuna, oysters, clams, crabs, and shrimp. Most of the above species are taken by fishermen operating in several states or districts, and a number are taken by several types of fishing gear. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data on the catch of the species in individual state catch tables. The information contained in this section includes the volume and value of the catch by individual types of gear and by states and districts.

PRINCIPAL UNITED STATES AND ALASKA FISHERIES

UNITED STATES AND ALASKA COD FISHERY

United States fishermen caught 53.5 million pounds of cod valued at 2.8 million dollars in 1954. This was an increase of over 12 million pounds or 29 percent in volume and 257 thousand dollars or 10 percent in value compared with the previous year's landings. With the exception of the low 1953 cod catch, the 1954 production was the smallest for any year for which records are available.

Otter trawls accounted for 89 percent of the cod catch; lines of all types, 7 percent; and gill nets, 3 percent. Other types of gear accounted for the remaining 1 percent.

Massachusetts, with a catch of nearly 30 million pounds led in the production of cod; followed by Washington (15.9 million pounds) and Maine (3.7 million pounds).

There was no cod fishery operating in Alaska during 1954. This was the third consecutive year that cod were not produced in the Territory.

ATLANTIC COAST HADDOCK FISHERY

The production of haddock on the East Coast of the United States during 1954 amounted to approximately 155 million pounds valued at over 10 million dollars to the fishermen. This was an increase of 15.3 million pounds or 11 percent but a decrease in value of 518 thousand dollars or 5 percent compared with 1953.

Otter trawls accounted for 99 percent of the total production while lines of all types, gill nets and dredges accounted for the remaining 1 percent.

Of the total catch, 96 percent was landed in Massachusetts; the remainder was taken in Maine, Rhode Island, New York, Connecticut, and New Jersey.

REVIEW OF CERTAIN MAJOR FISHERIES

PACIFIC COAST HALIBUT FISHERY

The 1954 North Pacific halibut catch by both United States and Canadian craft which landed at Seattle, Washington; Alaska; and British Columbia ports totaled a record 71 million pounds (dressed weight basis) valued at 11.9 million dollars. This production was 13 million pounds or 23 percent in volume and 3.3 million dollars or 38 percent in value above that of 1953. The 1954 halibut catch exceeded the previous high year of 1915 when nearly 69 million pounds of halibut were taken by the combined United States and Canadian fleets on the Pacific Coast.

The first regular season in areas 1B and 2 lasted 21 days, the shortest on record for these areas, three days shorter than the previous record short season in 1953. In 1952 the season in these areas lasted 26 days. The first regular halibut season in areas 3A and 3B lasted 58 days, compared with the shortest season on record for these areas of 52 days in 1953, and of 60 days in 1952.

As in previous years, the shortening of the halibut season greatly influenced port distribution of halibut landings. Price fluctuations and dispatch in unloading the vessels was a major factor in the selection of ports for landing halibut by the halibut fleets.

Data on the landings of halibut listed in the following tables represent the dressed weight of the fish, the weight on which the quota is based, while those weights in other tables in this report represent the round weight of the catch. In the sectional tables, halibut landed in Canada by vessels of United States registry is credited to Alaska. The dressed weight of halibut appearing in this section can be converted to round weight by multiplying by 1.33.

NOTE:--THE ABOVE TABLE DOES NOT INCLUDE LANDINGS IN CALIFORNIA WHICH TOTALED APPROXIMATELY 300,000 POUNDS. STATISTICS IN THE ABOVE TABLES ARE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL PACIFIC HALIBUT COMMISSION FOR WASHINGTON, OREGON AND BRITISH COLUMBIA, AND BY THE FISH AND WILDLIFE SERVICE FOR ALASKA.

ATLANTIC COAST MACKEREL FISHERY

During 1954, the Atlantic Coast mackerel catch amounted to approximately 4 million pounds valued at 588 thousand dollars to the fishermen, less than half the production of the previous year when approximately 8.5 million pounds were landed.

Pound nets accounted for 34 percent of the mackerel production in 1954 followed by gill nets (30 percent) and purse seines (17 percent). Prior to 1954, purse seines had accounted for the major portion of the catch, however, during recent years Atlantic mackerel have not been available in schools of sufficient size for successful purse-seining operations. This has nearly ended the annual spring migration of the New England purse-seine fleet to the Middle Atlantic and Chesapeake areas. Fish and Wildlife Service biologists and scientists of several state agencies, affected by the mackerel disappearance, continued research projects designed to determine the reason for the absence of the fish.

PACIFIC COAST MACKEREL FISHERY

During 1954 the catch of Pacific mackerel amounted to over 25 million pounds valued at 809 thousand dollars. This production was an increase of nearly 18 million pounds or 238 percent in volume and 480 thousand dollars or 146 percent in value compared with 1953. While the 1954 catch was greater than those in the previous two years, it was smaller than in any other year since 1932 and was far below the record catch of 146 million pounds taken in 1935.

The entire 1954 Pacific mackerel catch was taken in California. The San Pedro District accounted for 92 percent of the catch followed by the Santa Barbara District with 7 percent. The San Diego and Monterey Districts accounted for the remaining 1 percent.

Purse seines and lampara nets accounted for 86 percent of the 1954 mackerel catch, while brail or scoop nets caught 13 percent. Lines and gill nets accounted for the remainder.

ATLANTIC AND GULF COAST MENHADEN FISHERY

The menhaden catch in 1954 established a new record of over 1.7 billion pounds valued at more than 23 million dollars to the fishermen. This production represented an increase of nearly 42 million pounds or 2 percent in volume and 4.9 million dollars or 26 percent in value compared with the former record established the previous year. The 1954 menhaden catch was the greatest United States annual production of any single species and was 235 million pounds greater than the 1936 record catch of Pacific sardines. Nearly the entire 1954 menhaden production was used in the manufacture of oil and meal with only small quantities being used for bait.

Purse seines accounted for 98 percent of the 1954 menhaden catch, while pound nets took 2 percent. All other types of gear accounted for less than one-half percent.

Of the total catch, 45 percent was landed in the Middle Atlantic area; 23 percent in the Gulf area; 17 percent in the Chesapeake area; 12 percent in the South Atlantic area; and the remaining 3 percent in New England.

1/ LESS THAN 500 POUNDS OR 500 DOLLARS.

OCEAN PERCH FISHERY

The catch of Atlantic Ocean perch during 1954 amounted to 181 million pounds valued at 7.4 million dollars to the fishermen. This was an increase of nearly 28 million pounds or 18 percent in volume and 1.4 million dollars or 24 percent in value compared with the previous year's catch. Massachusetts ports accounted for 56 percent of the total catch compared with 61 percent in 1953, 68 percent in 1952, and 71 percent in 1951. Deliveries at Maine ports, principally Portland and Rockland, comprised 44 percent, compared with 39 percent in 1953, 32 percent in 1952, and 29 percent in 1951.

Practically the entire catch of ocean perch was taken by otter trawls, and was used in the manufacture of fillets, most of which were frozen. Waste from filleting was used in the manufacture of meal and oil, and as lobster bait. The catch was made on banks off New England and Nova Scotia, in the Gulf of St. Lawrence and on the Grand Banks of Newfoundland. In recent years there has been a sharp increase in the catch in the Gulf of St. Lawrence and off Newfoundland.

Additional historical statistics concerning the ocean perch fishery since its inception in 1934 may be found in Section 13 of this report.

1/ LESS THAN 500 POUNDS OR 500 DOLLARS.

PACIFIC SARDINE FISHERY

During 1954, the catch of Pacific sardines amounted to nearly 137 million pounds valued at 3.7 million dollars to the fishermen. This production was over 127 million pounds greater than the 9.5 million-pound production of 1953 which was the lowest year since 1915 when the fishery was in the early stages of its development. The catch of this species reached a peak of 1.5 billion pounds in 1936, and as late as 1944, billion plus catches were being recorded. By 1950, however, the catch had slumped to approximately 715 million pounds and in the following year it slipped to less than half this amount. Continuing its downward trend in 1952, the catch dropped to 14 million pounds and in 1953, to less than 10 million pounds.

During the year, no sardines were caught in the San Francisco District, where in 1936, nearly 800 million pounds were taken. Extensive investigations were continued during 1954 by State and Federal Agencies in an effort to determine the reasons for the great fluctuations in this fishery.

Historical data concerning the production of Pacific sardines since 1915 by States and districts may be found in Section 13 of Statistical Digest No. 36.

REVIEW OF CERTAIN MAJOR FISHERIES

PACIFIC COAST SALMON FISHERY

During 1954, the catch of salmon in the Pacific Coast States and Alaska amounted to approximately 325 million pounds compared with 313 million pounds during the previous year--an increase of nearly 12 million pounds or 4 percent compared with the landings during 1953. Landings in the Pacific Coast States declined over 15 million pounds during 1954 while those in Alaska were up about 27 million pounds. In the Puget Sound District of Washington where pink salmon are taken in quantity only in the odd-numbered years, the catch of this species amounted to only 2 thousand pounds compared with 34 million pounds in 1953. Of unusual interest was the 35 million-pound catch of sockeye salmon in Puget Sound indicating that the Fraser River rehabilitation program was succeeding.

The most important types of gear used in taking salmon in 1954 were purse seines, 114 million pounds; gill nets, 97 million pounds; pound nets (including floating traps) 56 million pounds; lines, 38 million pounds; and haul seines, 17 million pounds. Smaller quantities were taken in reef nets, dip nets, and wheels.

REVIEW OF CERTAIN MAJOR FISHERIES

PACIFIC COAST TUNA FISHERY

Landings of tuna and tunalike fishes in the Pacific Coast States during 1954 totaled 323.5 million pounds valued at more than 53 million dollars to the fishermen. This was an increase of nearly 20 million pounds or 6 percent in volume and 6 million dollars or 13 percent in value compared with 1953. The 1954 production was, however, far below the record 1950 catch of more than 390 million pounds.

The 1954 tuna prices were increased by 30 dollars a ton over 1953 for bluefin (to 340 dollars), skipjack (to 310 dollars) and yellowfin (to 350 dollars)-- record high ex-vessel prices for these species. These prices held until mid-August when a 30 dollar-a-ton price cut was announced by the packers. After considerable discussion, during which fishing continued, a compromise price reduction of 20 dollars a ton was reached. These reduced prices remained in effect for the balance of the year. The albacore ex-vessel price was steady at 410 dollars per ton during the entire season.

Skipjack (154 million pounds) was the most important species taken on a poundage basis, accounting for 48 percent of the total landings. Yellowfin (119 million pounds) accounted for a majority of the remaining poundage with 37 percent followed by albacore (8 percent), bluefin (6 percent) and bonito (1 percent).

REVIEW OF CERTAIN MAJOR FISHERIES

CLAM FISHERY

During 1954, the production of clam meats in the United States and Alaska totaled more than 32 million pounds valued at approximately 10 million dollars to the fishermen. This represented a decrease of over 5 million pounds of meats or 14 percent in volume and 1.6 million dollars or 14 percent in value compared with 1953's production.

The Middle Atlantic area led all others in the yield of clam meats with 50 percent of the total production. The New England area (35 percent) was in second place followed by the Chesapeake States (8 percent). The remaining areas accounted for 7 percent.

Dredges accounted for over 14 million pounds or 43 percent of the total production, while tongs, with nearly 7 million pounds accounted for 21 percent. Hoes, rakes, shovels, dip nets, and forks were other gear used in gathering clams.

In Section 14 of this report, under the heading "Conversion Factors," there are tables which give the average state yield per United States Standard Bushel for the clams taken on the Atlantic and Gulf Coasts.

1/ OCEAN QUAHOGS AND SURF CLAMS IN RHODE ISLAND HAVE BEEN COMBINED AND SHOWN UNDER SURF CLAMS.

CRAB FISHERY

The production of crabs in the United States and Alaska during 1954 amounted to nearly 141 million pounds valued at approximately 10 million dollars to the fishermen. This represented a decrease of 3.5 million pounds or 2 percent in the volume of the catch and 490 thousand dollars or 5 percent in value compared with 1953.

The Chesapeake States (55 million pounds) led all others in production, accounting for 39 percent of the total catch. The South Atlantic area ranked second with 30 million pounds or 21 percent. Practically the entire catch in these two areas consisted of blue crabs. Dungeness crabs dominated the Pacific Coast States production, while king crabs accounted for 76 percent of the Alaska production.

Traps and pots (80 million pounds) accounted for 57 percent of the total followed by trot lines with baits (26 percent) and otter trawls (9 percent).

In Section 14 of this Digest, under the Heading "Conversion Factors," there are tables which give the average number of crabs per pound by species for each of the Atlantic Coast and Gulf States. Supplementary shellfish tables are also shown after the summary tables for each Atlantic and Gulf regional section.

UNITED STATES OYSTER FISHERY

During 1954, oyster production in the United States amounted to nearly 82 million pounds of meats valued at 32.8 million dollars to the fishermen. This was an increase of 2.2 million pounds or 3 percent in volume and 3.7 million dollars or 13 percent in value compared with 1953.

The Chesapeake States continued to lead all other areas in production during 1954, accounting for slightly more than one half of the total catch. The Middle Atlantic area was in second place with 16 percent followed by the Gulf States (14 percent) and the Pacific Coast States (13 percent).

Dredges accounted for nearly 58 million pounds or 70 percent of the total production, while tongs, with nearly 21 million pounds, accounted for 25 percent. Grabs, rakes and gathering by hand made up the remainder.

In Section 14 of this Digest are tables which give the volume of the bushel measures used for oysters in the various Atlantic and Gulf States and the average yield per bushel. Historical statistics on the production of oysters during the years from 1880 to 1952 are contained in Statistical Digest No. 34 entitled "Fishery Statistics of the United States, 1952."

UNITED STATES AND ALASKA SHRIMP FISHERY

The 1954 catch of shrimp in the United States and Alaska totaled a record 268 million pounds valued at nearly 61 million dollars to the fishermen. This was an increase of nearly 8 million pounds or 3 percent in poundage but a decrease of almost 16 million dollars or 21 percent in value compared with the shrimp catch of the previous year. This significant reduction in value was probably due to greater landings of smaller size shrimp in 1954, and to continued consumer resistance to the purchase of shrimp due to the high prices which prevailed during most of 1953.

Texas (93 million pounds) accounted for 35 percent of the total poundage followed by Louisiana (84 million pounds) with 31 percent and the West Coast of Florida (46 million pounds) with 17 percent.

Otter trawls accounted for 99 percent of the total production. The remaining 1 percent was caught by beam trawls, bag nets, channel nets, traps, pots, push nets, and cast nets.

SECTION 13 - HISTORICAL FISHERY STATISTICS

Statistics of the fisheries of the United States are necessary for the best use of the nation's aquatic resources. As series of data for extended periods of time are accumulated, the information becomes increasingly more valuable in indicating trends in the supply and utilization of fishery products. The extent to which these data are used is frequently dependent upon the ready availability of needed information to researchers, management officials, and members of the fishing industry.

The Fish and Wildlife Service has in its files and in scattered publications historical data which would be of use to researchers and persons interested in the fisheries. Unfortunately few know of the existence of the information. To make these series readily available, a section was added to the 1951 edition of "Fishery Statistics of the United States" entitled "Historical Fishery Statistics." As these historical data are assembled they will appear in this section.

Historical statistics published in previous digests include data on the menhaden, oyster, and Pacific sardine fisheries. The titles of these series and the identifying number of the digest in which each appears follows.

Series	Published in Statistical Digest
Menhaden Fishery, 1873 - 1951	No. 30
Oyster Fishery, 1880 - 1952	No. 34
Pacific Sardine Fishery, 1915 - 1953	No. 36

The fourth series of historical data entitled "Atlantic Ocean Perch Fishery, 1930 - 1954" directly follows.

ATLANTIC OCEAN PERCH FISHERY, 1930 - 1954

The ocean perch supports a fishery that has grown spectacularly in the 20 years since the inception of the fishery. Although long familiar to New England fishermen, they were practically unknown to the fish-eating public until 1934. In 1933 when only 257 thousand pounds were landed, the catch ranked one hundred and sixth in volume of production among United States fisheries. In 1954 the catch totaled 181 million pounds and ranked fifth. Only menhaden, salmon, tuna and shrimp were taken in greater volume.

Prior to 1934, small catches of ocean perch made incidentally to the capture of other species were usually disregarded. In that year landings of haddock, the principal fish used for filleting, were down sharply and fishermen and dealers were searching for a fish suitable for filleting to augment the dwindling supplies of haddock. Ocean perch were available in large quantities and were found to yield attractive fillets of a rich and agreeable flavor suitable for shipping to inland markets. Demand for the fillets was developed, at first in the Midwest and later in other sections of the country, and landings increased from 257 thousand pounds in 1933 to nearly 67 million pounds in 1936 and to a peak of more than 258 million pounds in 1951.

In the early years of the fishery, most of the catch was landed at Boston, Massachusetts. However, deliveries to Gloucester, Massachusetts grew rapidly, and in each year since 1938 it has been the principal landing port for these fish. In 1951 nearly 178 million pounds of ocean perch were landed at Gloucester. Portland and Rockland, Maine also became important ocean perch ports. Portland was the principal Maine port of landing until 1944 when Rockland moved into first place. In 1954, however, Portland landings once again exceeded those at Rockland.

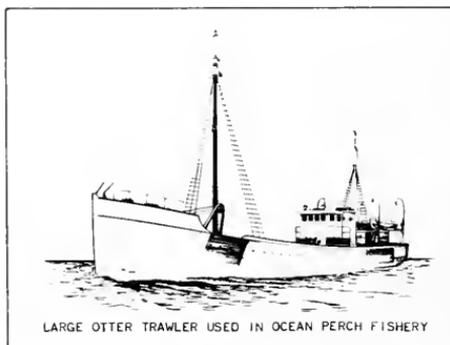

Ocean perch is one of few commercial species giving birth to live young instead of eggs. Therefore the number of young spawned each year is comparatively low. The fish grow slowly at the rate of about an inch a year until around their eleventh year when they mature. Because of the few young and slow rate of growth, the rapid expansion

HISTORICAL FISHERY STATISTICS

of the ocean perch fleet and catch has resulted in a considerable decline in the yield from the nearby grounds as the accumulated stocks of older fish were caught. In order to supply the market, the fleet expanded operations to more distant grounds progressively and concentrated increasingly on smaller fish.

In the early years of the ocean perch fishery the entire catch was taken on grounds off the coasts of New England and Nova Scotia. Most of the catch was taken off New England until about 1948 when the Nova Scotia banks began yielding the major portion of the production. In 1951 important catches were made in the Gulf of St. Lawrence and on the Grand Banks of Newfoundland. In both 1953 and 1954 the major portion of the catch for which area of capture is known, was taken from the Gulf of St. Lawrence and the Grand Bank of Newfoundland.

The entire catch of ocean perch is filleted, and most of the fillets are frozen. Waste from filleting is used for manufacture into meal and oil and as lobster bait. Practically the entire catch is taken with otter trawls.

SECTION 14

STATISTICAL SURVEY PROCEDURE

This report is another in a series of annual statistical reports containing data on the quantity and value of the commercial catch of fishery products and the numbers of persons and operating units engaged in the commercial fisheries of the United States and Alaska. The report has been prepared and published by the Branch of Commercial Fisheries, Fish and Wildlife Service, Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Departments of Interior, Commerce, Commerce and Labor, and the United States Fish Commission.

In order that those who use the statistical data contained in this and previous reports may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over a period of years, and changes in methods have been made at times when such changes have appeared to work toward general improvement. While the surveys in the several sections are not made in the same manner, owing to varying facilities and records in different states, an attempt has been made to make the data collected by various methods comparable with respect to the same year as well as over a period of years. Throughout the entire plan it has been the intention to coordinate State and Federal fishery statistical work so that there will be as little duplication of effort as possible.

SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the statistical personnel of the Branch. In the course of these surveys, the field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employment in the fisheries, quantity of fishing gear, number and classification of fishing and transporting craft, and the volume and value of manufactured fishery products and byproducts. The various phases of these surveys are discussed in detail in the sections following.

History--The first comprehensive statistical survey of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the United States National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in the early survey and recorded in Mr. Goode's reports. The survey for 1880, however did not include the Mississippi River and its tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for various of the intervening years between 1880 and 1908 and from 1909 to 1928. A survey of the entire United States was made for 1908. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and its Tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for these same sections were also collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on the wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Various sections were surveyed during the years from 1933 to 1949, inclusive. A complete survey of all sections of the country was made for 1950. Since 1951, all of the coastal areas were canvassed, and catch records were obtained for the Lakes section. Data on the wholesale and manufacturing industries were collected in all of the surveys from 1933 to 1940, inclusive. With the exception of 1950, 1952, 1953, and 1954, lack of personnel and funds in the years since 1940 precluded the collection of data on wholesale and manufacturing firms except for those data collected as part of the canned fishery products and byproducts surveys.

The chart on the following page indicates the years for which surveys have been made in the various sections. Figures for more recent years are available from the Service in bulletin form, but data for the earlier years are available only in the Fish Commission and Bureau of Fisheries printed reports. These reports are available for reference in the Department of the Interior library and in many public libraries.

 COMPLETE SURVEY
  PARTIAL SURVEY
  NO SURVEY

STATISTICAL SURVEY PROCEDURE

Since the surveys of the fisheries have varied in completeness three legends have been used for the years shown in the chart to indicate whether complete, partial, or no surveys were conducted in the individual regions. The designation 'complete survey' has been used to indicate that basic operating unit and catch data were obtained and that complete information was collected on employment in wholesale and manufacturing establishments and on the production of manufactured fishery products. The legend 'partial survey' usually indicates that operating unit and catch statistics were collected, but that no information was obtained on employment in wholesale and manufacturing establishments and that only partial data were obtained on the production of manufactured fishery products. In some instances the designation 'partial survey' is used for regions in which only catch statistics were collected. The legend 'no survey' indicates that a general canvass was not conducted to obtain operating unit, catch, employment in wholesale and manufacturing plants, and complete manufactured products data. Although the charts indicated that in certain regions no surveys were conducted some information may be available on the landings at certain important ports. Likewise information on the catch of certain species, such as menhaden, may be available as a result of information collected with the annual canned fish and byproducts survey. Data on the annual production of canned fishery products and byproducts have been collected for all regions since 1921, while information was obtained on the production of packaged fish for 1926 and annually since 1928.

A bibliography listing the various surveys made since 1880 and the publications in which the results were published appeared in Statistical Digest No. 21. A list of the statistical bulletins in the Current Fishery Statistics series published during 1954 may be found in Section 17 of the current digest.

Field Personnel.--The statistics contained in this volume have been collected by a group of trained marketing specialists which comprise a part of the permanent staff of the Branch of Commercial Fisheries of this Service.

Period Covered.--These specialists are assigned permanent field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. They normally collect statistics of fishery operations for the year preceding that in which they are working; and since their field work occupies the greater part of the year, it is usually at least a year from the end of the calendar year for which they are collecting data until the figures are available. The data usually are collected and published on a calendar year basis, although for some States they are on a fiscal year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Beginning with 1930 and continuing to the present time, they have been collected on the basis of the calendar year.

Scope.--The coastal statistical surveys include canvasses of the commercial fisheries of the oceans and bays and of the coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics of the fisheries of the Mississippi River cover canvasses of the fisheries of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is prosecuted. Statistics of the fisheries of the Great Lakes cover canvasses of the fisheries prosecuted in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries prosecuted in Lake Okechobee. Surveys for statistics of the wholesale and manufacturing fishery industries cover such plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

Methods of Collection.--Several methods for the collection of fishery statistics are employed, each of which has been carefully studied to obtain the best results with the available personnel and funds. In most instances the field personnel obtain lists of the names of fishing vessels, names and numbers of motorboats, and names of owners of these craft from local custom officials. Also it usually is possible to obtain the names of licensed commercial fishermen, fishing craft and some statistics on the catch from State fishery agencies; from other State, county or city sources; or from private organizations.

With such preliminary records as are available for their guidance the field specialists visit each fishing community in their field unless these preliminary records are so complete that personal visits may be eliminated. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited and data are obtained from them on their purchases of fishery products. While it is impossible for the few Service representatives available for this work to interview each fisherman in a given locality, the more important ones are visited, and a sufficient number of those of lesser importance are interviewed to obtain reliable information on their production, the number of fishing craft employed, the quantity of gear operated, and the number of persons employed as fishermen.

The state fishery agencies in a number of states have developed relatively complete statistical systems which greatly facilitate the Service's surveys in these states. In these states the Service only conducts such surveys as may be necessary to make the data comparable with that of other States.

The Service obtains most of the catch statistics and usually the value of the catch direct from the records of the State fishery agencies for the fisheries of the Great Lakes, the Upper Mississippi River, and the International lakes of Northern Minnesota. To obtain data on the number of fishermen, boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

Service statistical personnel are stationed at Seattle, Washington, and San Pedro, California, who survey the fisheries of the Pacific Coast States. As a rule they obtain figures on the volume of the catch from the records of the State fishery departments. The value of the catch is derived from state and dealers' records. In Washington and Oregon the data for operating units in the offshore fisheries are obtained from the records of various fishery organizations as well as from records of the State Department of Fisheries. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In several States, the Service and the respective State fishery agency are cooperating in the collection and publication of current monthly data on the catch. These data form the basis of the annual data published in this report for the following States: Florida, Maine, Mississippi, and Texas. State agencies in Connecticut, New York, Delaware, and Maryland also cooperate with the Service in this work but the statistics are only tabulated annually.

In the administration of the Alaska fisheries, the Service requires that copies of all receipts for fish and shellfish purchased from fishermen be furnished to the Service's Branch of Alaska Fisheries. The data on these tickets are compiled by that Branch and the summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish of the Great Lakes States usually are shown in weights as landed, which may be in the round or dressed condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks and gastropods, and the round weight of crustaceans and such mollusks as squid and octopus.

Shore and vessel fisheries.--In general, statistics of the shore fisheries, as collected by the Service's representatives, include data on the number of casual and regular fishermen; number of motor and other fishing boats and accessory boats; type and quantity of gear used; and the volume, value, and method of capture of each species caught by boats (for our purpose craft of less than 5 net tons capacity are called 'boats') for each locality or group of localities. This method is not followed in some sections where the availability of data collected by the States fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number of the crew, rig of vessels, net tonnage, kind and quantity of gear used, accessory boats carried, and volume, value, and method of capture of each species. For our purpose craft of 5 net

STATISTICAL SURVEY PROCEDURE

tons capacity or more are called 'vessels'. As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of our agents collecting these data for individual vessels.

Statistics of the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not enumerated.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose fishermen not on vessels have been divided into 'regular' and 'casual' fishermen. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those whose principal business is something other than fishing, and who receive less than one-half of their annual compensation from fishing. On the Pacific Coast and in Alaska it is impossible to separate regular from casual fishermen.

Since 1942, the catch of fish and shellfish has been credited to the port at which it was landed. Prior to the survey for that year it was the practice of the Service to credit the entire catch of a vessel to the principal port at which fish or shellfish were unloaded, regardless of the actual point of landing. This policy was discontinued since it quite often resulted in inconsistencies by crediting catches of certain fish to areas to which they are not common inasmuch as fishing vessels occasionally operate in areas far removed from their principal fishing port. An outstanding example of this is the case of the Southern trawl fishery. In this fishery conducted off the New Jersey, Maryland, Virginia, and North Carolina coasts, many fishing vessels from Massachusetts operate for 6 to 10 weeks during the winter season. Prior to the survey for 1942 the catch, consisting principally of fish common to these waters, was credited to Massachusetts. Under the present system, this catch is credited to the southern ports where it is landed.

Since 1949 on the Pacific Coast and 1951 for the balance of the country, craft, fishermen, and gear have been reported for each State in which they fished. A total exclusive of duplication is shown for each section, and for the United States as a whole. Prior to the surveys for 1949, each craft on the Pacific Coast was credited to its home port unless it did not fish from that port during the year. In that case, it was credited to the locality where it landed the greatest portion of its catch. Prior to the survey for 1951, each craft on the Atlantic and Gulf Coasts and interior waters was credited to the port where it landed the greatest portion of its catch during the year. This system was changed to provide more accurate data on the total number of craft operating in a given State. With the increased mobility of the fishing fleet in recent years, the number of vessels fishing in more than one state has increased greatly.

Beginning with data for 1951, the reporting of units of gear was standardized so that nets or lines made up of small units for ease in handling, but fastened together in fishing, were counted as a single unit rather than as a number of smaller units. Prior to 1951, the small units were sometimes counted as individual pieces of gear even though they were combined for fishing. This rule does not apply to halibut set or long lines on the Pacific Coast. In this fishery each skate of gear is counted as one line, even though they are fastened together in fishing, because the International Fisheries Commission uses a skate of gear as a unit in their studies of fishing intensity.

Publication of Data.--Statistics of employment in the fisheries, craft and gear engaged, quantity and value of catch, and certain data on industries related to the fisheries are summarized according to the geographic division and published in bulletin form as soon as possible after the completion of each survey. Later, the figures, in more detail, are included in the annual reports of the Service entitled 'Fishery Statistics of the United States' and in 'Alaska Fishery and Fur-Seal Industries'.

Data on the operating units (fishermen, fishing craft, and gear) and catch by counties for the Atlantic and Gulf States have been included in these annual statistical reports for the years from 1928 to 1938, except for 1932. These data have also been published in the reports for the years 1945 and 1950. County data were collected for the areas in which surveys were conducted during the years since 1938, except in Maryland since 1942, and the data are on file in the Washington office of the Branch of Commercial Fisheries.

STATISTICAL SURVEY PROCEDURE

LOCAL AND SPECIAL SURVEYS

Landings at Certain Massachusetts Ports.--Detailed statistics are collected on the landings of aquatic products by individual fishing craft at Boston, Gloucester, New Bedford, Provincetown, and other Cape Cod ports. Service representatives are permanently stationed at each of these ports. They obtain daily figures on the quantity of fish landed by each fishing craft, the value of such fish landed, the date of departure and arrival of the craft, the gear used in their capture, and, except for ports located on Cape Cod, the grounds from which the fish were taken. The Branch of Fishery Biology and the Fishery Market News Service cooperate in the collection of these data.

Statistics on the landings at the above ports are released monthly and annually in bulletin form and detailed data are published in the annual statistical digests of the Branch. Products of American Fisheries received duty free at Boston and Gloucester from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador, have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester have been collected annually since 1893. Some data are also available for these ports for earlier years. Information on landings at Provincetown and other Cape Cod ports has been collected annually since 1945, and at New Bedford since 1938.

Shad and Alewife Fisheries.--Owing to the importance of the Hudson and Potomac Rivers in the production of shad, surveys for statistics of the catch, value of the catch, and operating units are made annually. On the Potomac River similar statistics are also obtained for the alewife fishery. Much of the data required for these surveys are available from the State fishery agencies.

Statistics of the annual shad and alewife fisheries are not published separately in bulletin form. However, a summary of the data is published in the annual Statistical Digest.

Statistics of the shad fishery of the Hudson River are available for 1896, 1897, 1898, 1901, 1904, 1910, and annually since 1915, while data for the shad fishery of the Potomac River are available for 1896, 1901, 1904, 1909, 1915, from 1919 to 1942, inclusive, and annually since 1944. Statistics of the alewife fishery of the Potomac River are available for 1896, 1909, 1915, 1919 to 1942, inclusive, and annually since 1944.

Pacific Halibut Fishery.--Statistics of the Pacific halibut fishery are obtained by the Service's personnel in Seattle, aided by Service representatives in Alaska, and the International Fisheries Commission. The fleet classification is that of the International Fisheries Commission, under which vessels that are listed by the Commission as having their home port in Alaska are included in the 'Alaska fleet', and all other vessels of United States registry landing at Seattle or ports in British Columbia or Alaska are included in the 'Washington fleet'. The catch is credited to the point where landed in the section 'Review of Certain Major Fisheries'. In the other sections of this report, all halibut is credited to the port where landed, except that all halibut landed by United States and Alaskan craft in British Columbia is credited to Alaska. Monthly and annual statistical bulletins are available on this fishery, being published along with the statistics of the landings of fishery products at Seattle, Washington and detailed statistics are published in the annual statistical reports of the Branch. Statistics of the landings of halibut at Pacific Coast ports have been collected since 1925.

Canned Fishery Products and Byproducts.--Beginning in 1921, the Service has made annual surveys for statistics of the canned fishery products and byproducts industries of every section. These are begun the first week in January of each year for statistics of the production in the preceding year. The Service obtains by mail, so far as possible, the production of canned fishery products or byproducts from each plant in the United States engaged in this business. Where it is impossible to obtain reports by mail, the report is secured by personal visit by the Service's agents. The data obtained for canned fishery products include statistics on the yield and value of the production for each commodity by can sizes, case sizes, and trade classifications. The value shown for canned products and byproducts constitutes the gross amount received by the packer at the production point, no deductions being made for commissions or expenses. Statistics of the canned fishery products and byproducts produced in Alaska are received on the same statements obtained by the Alaska branch that include statistics of general fishery operations.

STATISTICAL SURVEY PROCEDURE

Annual statistical bulletins are issued on this trade, and detailed statistics of the output are published in the annual Statistical Digest. In addition to the data obtained on the output of these products annually since 1921, data also usually were obtained prior to 1921 for the years the various sections were surveyed.

Packaged Fish Trade.--Statistics of the annual production and value of fish packaged in the United States are obtained as a part of the survey for the statistics of the canned fishery products and byproducts industries. These data are released in bulletin form annually and later in more detailed and adjusted form in the annual Statistical Digest. Statistics of the production of packaged fish are available for 1926 and annually since 1928, except that no data was collected for the years 1941 to 1946, inclusive, in California.

Cold-Storage Holdings of Fish.--Information on the monthly freezings and holdings of fishery products is obtained from cold storage warehouses by mail and by Service employees in various cities of the country. Data are also obtained on the holdings of certain cured fish. Bulletins showing these statistics are issued monthly and annually.

Detailed cold-storage statistics also are published in the annual Statistical Digests issued by the Service. Information regarding cold-storage holdings of fishery products have been published since 1917 and data on quantities of fish frozen, for the years from 1920 to 1925, inclusive and annually since 1928.

Foreign Fishery Trade.--Statistics of the foreign fishery trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics of all known fishery products imported or exported have been assembled and published annually since 1926 in the Branch's Statistical Digest. For earlier years, they are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

PRACTICES AND TERMS

Certain practices and terms of importance used in the compilation of fishery statistics are explained below.

Area Designations.--The Roman numerals used to designate the various areas in the Atlantic Ocean and the Gulf of Mexico are those numbers assigned by the North American Council of Fishery Investigations.

Days Absent.--In computing 'days absent' for vessels landing fares at the various ports, the day of arrival, but not the day of departure is included; thus a vessel leaving port on the 8th of the month and returning on the 15th of the month will be credited with 7 days absence. Prior to 1944, 'days absent' included both the day of departure and the day of arrival.

Operating Units.--Operating units as referred to in this document include persons engaged in the fisheries, and craft and gear employed in the fisheries.

Vessel.--The term 'vessel' refers to a craft having a capacity of 5 net tons or more.

Boat.--The term 'boat' refers to a craft having a capacity of less than 5 net tons.

Incidental Catch.--The term 'incidental catch' refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

Percentages.--Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, the integer is raised or lowered to make it an even number.

Fish.--The term 'fish' as used in this report includes all species belonging to the class Pisces.

Shellfish, etc.--A shellfish is an aquatic invertebrate animal having a shell, such as a mollusk, or crustacean. However, in order to reduce the classifications appearing in the catch tables, all items not properly listed as 'Fish' or 'Whale Products' have been included under 'Shellfish, etc.' Accordingly, there is included under this classification turtles, frogs, sponges, sea weed, worms, etc.

Whale Products.--Since data are not available on the poundage of whales taken, statistics appearing in catch tables on the yield of these animals represent the weight of whale products produced such as meal, sperm oil, whale oil, etc. The values shown represent the amount received by the manufacturer for the products.

Converting.--Many of the figures shown in the statistical tables published herewith have been converted to thousands of pounds or dollars. In making these conversions the largest number from which a group of items is computed is raised or lowered to the nearest thousands place. The individual items are adjusted to conform to the total thus obtained.

Confidential data.--The statistical data collected by the Branch are confidential, and unless specific authorization is given, are not divulged in any manner except to employees of the Fish and Wildlife Service whose duties require this information. Statistics on the production of wholesale and manufacturing firms are published only for commodities or geographical areas where the production of three or more firms may be grouped, unless special permission is obtained from the firms involved to release the data.

CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds for the sake of uniformity and for purposes of comparison. This presents little difficulty in the case of fish since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, thousands of shellfish, gallons of meat, etc. These many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States the problem becomes even more complex.

All bivalve mollusks are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production of certain other shellfish, such as crabs, in number.

Oysters.--Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf coasts is reported to Service personnel in bushels; and prior to the data obtained for the year 1930 conversion from bushels to pounds of meats was effected on the basis of a uniform yield of 7 pounds of meats to the bushel. However, investigations have shown considerable variation from this figure. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

SECTION 15 - GLOSSARY

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given.

Common names as shown in Service reports	Other common names	Scientific names
FISH		
Alewife	{ Branch herring, big-eyed herring, river herring	<i>Pomolobus pseudoharengus</i>
Amberjack	Blueback, glut herring, shad herring	<i>Pomolobus aestivalis</i>
Anchovy	Jack	<i>Seriola</i> species
Angelfish	<i>Engraulis mordax</i>
Anglerfish	{ <i>Pomacanthus</i> species <i>Holacanthus</i> species
Barracuda	{ Goosefish, allmouth, headfish, monkfish, bellyfish	<i>Lophus piscatorius</i>
Black bass	Smallmouth bass	<i>Sphyraena</i> species
Bluefish	Largemouth bass	<i>Micropterus dolomieu</i>
Blue pike	Tailor, skipjack	<i>Micropterus salmoides</i>
Blue runner or hardtail	Pike perch, hard pike, blue pickerel (Canada)	<i>Pomatomus saltatrix</i>
Bonito	Runner	<i>Stizostedion vitreum glaucum</i>
Bowfin	See tuna and tunalike fishes	<i>Caranx crysos</i>
Buffalofish	{ Fresh-water dogfish, tchoupique, grindle	<i>Amia calva</i>
Burbot	Winter carp	<i>Ictiobus</i> species
Butterfish	Lawyer, ling	<i>Lota maculosa</i>
Cabezone	Marbled sculpin	<i>Poronotus triacanthus</i>
Cabio	{ Crab eater, coalfish, lemonfish, black bonito	<i>Scorpaenichthys marmoratus</i>
Cabrilla	Rock bass	<i>Rachycentron canadus</i>
Carp	German carp, summer carp	<i>Epinephelus analogus</i> <i>Cyprinus carpio</i>
Catfish and bullheads	{ <i>Ameiurus</i> species <i>Ictalurus</i> species <i>Pilodictis olivaris</i>
Chub	{ Longjaw, bluefin, blackfin (United States), tullibee (Canada)	All <i>Leucichthys</i> except <i>artedi</i> (in Great Lakes)
Cigarfish	Scad	<i>Decapterus punctatus</i>
Cisco	Herring (Canada)	<i>Leucichthys artedi</i> (Lake Erie only)
Cod	Codfish	{ <i>Gadus morhua</i> (Atlantic) <i>Gadus macrocephalus</i> (Pacific)
Corbina	California whiting, corvina, surffish	<i>Menticirrhus undulatus</i>
Crappie	White crappie, calico bass	<i>Pomoxis annularis</i>
Crevalle	Black crappie	<i>Pomoxis sparoides</i>
Croaker	Jack, jackfish	<i>Caranx hippos</i>
Cunner	Crocus, hardhead	<i>Micropogon undulatus</i>
Ousk	Chogset, blue perch, bergall	<i>Tautoglabrus adspersus</i>
Dolly varden trout	Salmon trout, bull trout	<i>Brosme brosme</i>
Dolphin	<i>Salvelinus malma</i>
Drum:	<i>Coryphaena hippurus</i>
Black	Oyster cracker, oyster drum, sea drum	<i>Pogonias cromis</i>
Red	Channel bass, redfish, spotted bass.	<i>Sciaenops ocellata</i>
Eel:
Common	<i>Anguilla bostoniensis</i>
Conger	<i>Leptocephalus conger</i>
Flounder:
Gray sole	<i>Glyptocephalus cynoglossus</i>
Lemon sole	<i>Pseudopleuronectes dignabilis</i>

(Continued on next page)

GLOSSARY

Common names as shown in Service reports	Other common names	Scientific names
FISH - Continued		
Flounder: - Continued		
Yellowtail	Dab	<i>Limanda ferruginea</i>
Dab	Sea dab	<i>Hippoglossoides platessoides</i>
Blackback	Winter flounder	<i>Pseudopleuronectes americanus</i>
Fluke	{ Summer flounder, gulf flounder, flounder	<i>Paralichthys</i> species
'Sole'	Pleuronectidae species and Bothidae species
'California halibut'	<i>Paralichthys californicus</i>
Unclassified	Pleuronectidae and Bothidae species
Flying fish	<i>Cyphselurus</i> species
Frigate mackerel	Boo hoo	<i>Auxis thazard</i>
Garfish	Gar, sea gar	<i>Lepisosteus</i> species
Gizzard shad	Nanny shad, mud shad, winter shad ..	<i>Dorosoma cepedianum</i>
Goldfish	Sand perch, gold perch	<i>Carassius auratus</i>
Goosefish	See anglerfish	
Grayfish	{ Dogfish	<i>Squalus suckleyi</i> (Pacific)
	{ Spiny dog	<i>Squalus acanthias</i> (Atlantic)
	{ Smooth dog	<i>Mustelus canis</i>
Grouper	'Sea bass'	{ <i>Epinephelus</i> species <i>Myceteroperca</i> species
Grunt	Margate fish, sailors' choice	<i>Haemulon</i> species
Haddock	<i>Melanogrammus aeglefinus</i>
Hake:		
Red	{ Squirrel hake, ling, black hake, mud hake	<i>Urophycis chuss</i> (Atlantic)
White	Hake	<i>Urophycis tenuis</i> (Atlantic)
Pacific	Merluccio	<i>Merluccius productus</i> (Pacific)
Halibut	{ <i>Hippoglossus hippoglossus</i> (Atlantic) <i>Hippoglossus stenolepis</i> (Pacific)
Hardhead	Sacramento rockfish	<i>Orthodon microlepidotus</i> (Pacific)
Harvestfish	{ Starfish, dollarfish, pappyfish, butterfish (N.C.)	<i>Petrolus alepidotus</i>
Herring:		
Lake	Herring	{ <i>Leucichthys artedii</i> (Great Lakes, except Erie)
Round	<i>Etrumeus sadina</i>
Sea	{ <i>Clupea harengus</i> (Atlantic) <i>Clupea pallasii</i> (Pacific)
Thread	<i>Opisthonema oglinum</i>
Herring smelt	<i>Argentina silus</i>
Hickory shad	Tailor shad, skip, autumnal herring	<i>Pomolobus medocensis</i>
Hogchoker	<i>Trinectes maculatus</i>
Hogfish	Capitaine, perro perro	<i>Lachnolaimus maximus</i>
Horse mackerel	{ Pacific (see jack mackerel) Atlantic (see tuna, bluefin)	
Jack mackerel	Horse mackerel	<i>Trachurus symmetricus</i>
Jewfish	<i>Promicrops itajara</i>
John dory	<i>Zenopsis ocellata</i>
Kingfish	Little roncador, croaker, tom cod ..	<i>Genyonemus lineatus</i>
King mackerel	Cero, kingfish	{ <i>Scomberomorus cavalla</i> <i>Scomberomorus regalis</i>
King whiting or 'kingfish'	Whiting, sea mink, ground mullet ..	<i>Menticirrhus</i> species
Lake trout	<i>Salvelinus namaycush</i>
Lamprey	<i>Petromyzon marinus</i> (Atlantic) <i>Entosphenus tridentatus</i> (Pacific)

(Continued on next page)

GLOSSARY

Common names as shown in Service reports	Other common names	Scientific names
FISH - Continued		
Launce	Sand eel, lant, sand launce	<i>Ammodytes tobianus</i>
Lingcod	{ Cultus cod, blue cod, buffalo cod, ling	<i>Ophiodon elongatus</i>
Mackerel	{ <i>Scomber scombrus</i> (Atlantic) <i>Pneumatophorus diego</i> (Pacific)
Marlin	<i>Makaira</i> species
Menhaden	Mossbunker, pogy, fatback	<i>Brevoortia</i> species
Minnow	Cyprinidae family
Mojarra	Sand perch, sand bream	Cerridae family
Mooneye	Toothed herring	<i>Hiodon</i> species
Moonfish	<i>Vomer setipinnis</i> <i>Selene vomer</i>
Mullet	{ Jumping mullet, striped mullet, silver mullet	<i>Mugil</i> species
Mummichog	Mayfish, killifish	<i>Fundulus</i> species
Muttonfish	Mutton snapper	<i>Lutjanus analis</i>
Ocean perch:		
Atlantic	Rosefish, redfish, red perch	<i>Sebastes marinus</i>
Pacific	<i>Sebastes alutus</i>
Ocean pout	Eelpout, sea pout	<i>Macrozoarces anguillar</i>
Paddlefish	Spoonbill cat	<i>Polyodon spathula</i>
Perch	Surffish	Embiotocidae family (Pacific)
Permit	<i>Trachinotus gooderi</i>
Pigfish	Hogfish (N. C.)	<i>Orthopristis chrysopterus</i>
Pike or pickerel	Great lakes pike	{ <i>Esox reticulatus</i> <i>Esox lucius</i>
Pilchard	Sardine	<i>Sardinops caerulea</i>
Pinfish	Bream, salt-water bream	<i>Lagodon rhomboides</i>
Pollock	Boston bluefish	<i>Pollachius virens</i>
Pompano	Great pompano	{ <i>Trachinotus</i> species (Atlantic) <i>Palometa simillima</i> (Pacific)
Porgy	See scup or porgy	
Porkfish	<i>Anisotremus virginicus</i>
Quillback	Spearfish or skimfish	<i>Carpiodes</i> species
Ratfish	<i>Hydrolagus colliei</i>
Roach	Golden shiner	<i>Notemigonus crysoleucas</i>
Rock bass	{ Redeye, goggle-eye	<i>Ambloplites rupestris</i> (fresh-water)
Rockfish	{ Groups, sand bass	<i>Paralabrax nebulifer</i> (Pacific)
.....	Rock cod, snapper	<i>Sebastes</i> species (Pacific)
.....	Blue bass, greenfish	<i>Girella nigricans</i>
Rudderfish	Halfmoon	<i>Medialuna californiensis</i>
Sablefish	Black cod	<i>Anoplopoma fimbria</i>
Salmon:		
Atlantic	<i>Salmo salar</i> (Atlantic)
Pacific:		
Chinook or king	Tyee, spring	<i>Oncorhynchus tshawytscha</i>
Chum or keta	Fall, dog	<i>Oncorhynchus keta</i>
Pink	Humpback	<i>Oncorhynchus gorbusha</i>
Red or sockeye	Blueback	<i>Oncorhynchus nerka</i>
Silver or coho	<i>Oncorhynchus kisutch</i>
Steelhead	See steelhead trout	
Sand perch	Yellowtail perch	<i>Rasbirella chrysur</i>
Sauger	Sand pike	<i>Stizostedion canadense</i>
Sawfish	<i>Pristis pectinatus</i>
Sculpin	Scorpionfish	<i>Scorpaena guttata</i>
Scup or porgy	Porgee, paugy, fair maid	<i>Calamus</i> or <i>stenotomus</i> species

GLOSSARY

Common names as shown in Service reports	Other common names	Scientific names
FISH - Continued		
Sea bass:		
Black	{ Black jewfish (Pacific)	<i>Stereolepis gigas</i>
White	{ Blackfish (Atlantic)	<i>Centropristes striatus</i>
Sea catfish	Gafftopsail	<i>Cynoscion nobilis</i> (Pacific)
Sea robin	<i>Ragge marina</i>
Sea trout or weakfish:		<i>Prionotus</i> species
Gray	Gray trout, squeteague	<i>Cynoscion regalis</i>
Spotted	Spotted trout, speckled trout	<i>Cynoscion nebulosus</i>
White	White trout, sand trout	<i>Cynoscion arenarius</i>
Shad	American shad, white shad	<i>Alosa sapidissima</i>
Sharks	{ <i>Carcharodon</i> species, <i>Mustelus</i> species, <i>Carcharhinus</i> species, <i>Sphyrna</i> species, <i>Lamna</i> species, and others
Sheepshead:		
Fresh-water	{ Fresh-water drum, whitefish, gaspargou, gou	<i>Megalops notatus grunniens</i>
Salt-water	Redfish, fathead	<i>Archosargus</i> species (Atlantic)
Silver perch	See sand perch	<i>Pimelometopon pulchrum</i> (Pacific)
Silverside	Spearing	<i>Menidia</i> species
Skate	Ray, rajafish	<i>Raja</i> species
Skipper	Billfish	<i>Scomberesox saurus</i>
Smelt	{	{ <i>Osmerus mordax</i> (Atlantic and Great Lakes)
	{ Eulachon	Atherinidae and Osmeridae species (Pacific)
		<i>Thaleichthys pacificus</i>
Snapper:		
Lane	Schoolmaster	<i>Lutjanus synagris</i>
Mangrove	Gray snapper	<i>Lutjanus griseus</i>
Red	<i>Lutjanus blackfordii</i>
Yellowtail	<i>Ocyurus chrysurus</i>
Snook	Robalo, sergeantfish, pike	<i>Centropomus undecimalis</i>
Spadefish	Porgy (N. C.), angelfish	<i>Chaetodipterus faber</i>
Spanish mackerel	Mackerel	<i>Scomberomorus maculatus</i>
Splittail	<i>Pogonichthys macrolepidotus</i>
Spot	Lafayette, goody	<i>Leiostomus xanthurus</i>
Squawfish	Sacramento pike	<i>Ptychocheilus grandis</i>
Squirrel hake	See hake, red	
Steelhead trout	Salmon trout	<i>Salmo gairdnerii</i>
Striped bass	Rockfish, rock	<i>Roccus saxatilis</i>
Sturgeon:		
Common	<i>Acipenser</i> species
Shovelnose	<i>Scaphirhynchus platyrhynchus</i>
Sucker	{ Fresh-water mullet, redfin, bayfish	Catostomidae species
Sunfish	Bream, perch, bluegill	Centrarchidae species
Surfscum	See perch	
Swallowfish	{ Puffer, swell toad, globefish, blowfish	<i>Sphoeroides maculatus</i>
Swordfish	<i>Xipias gladius</i>

(Continued on next page)

GLOSSARY

353

Common names as shown in Service reports	Other common names	Scientific names
FISH - Continued		
Tautog	Blackfish, oysterfish	<i>Tautoga onitis</i>
Tenpounder	Big-eyed herring, ladyfish	<i>Elops saurus</i>
Thimble-eyed mackerel	Chub mackerel, bullseye, mackerel	<i>Pneumatophorus colias</i>
Tilefish	<i>Lopholatilus chamaeleonticeps</i>
Tomcod	Frost fish	<i>Microgadus tomcod</i> (Atlantic)
Triggerfish	<i>Microgadus proximus</i> (Pacific)
Tripletail	Sunfish (N. C.), blackfish	<i>Balistes capriscus</i>
Tullibee	See chub	<i>Lobotes surinomensis</i>
Tuna and tunalike fishes:		
Albacore	Longfin tuna	<i>Germo alalunga</i>
Bluefin	{ Horse mackerel	<i>Thunnus saliens</i> <i>Thunnus thynnus</i>
Bonito	<i>Thunnus secundodorsalis</i>
Little	Bonito, albacore, false albacore ..	<i>Sarda sarda</i> (Atlantic)
Skipjack	Striped tuna	<i>Sarda chilensis</i> (Pacific)
Yellowfin	<i>Euthynnus alletteratus</i>
Turbot	{ Greenland halibut	<i>Katsuwonus pelamis</i>
Wahoo	{ American turbot, triggerfish	<i>Neothunnus macropterus</i>
Warsaw	Black jewfish	<i>Reinhardius hippoglossoides</i> (off New England)
White bass	White lake bass	<i>Balistes carolinensis</i> (off Florida)
Whitebait	Small fry of several species	<i>Acanthocybium solandri</i>
Whitefish:		
Common	<i>Carruba nigrita</i>
Menominee	<i>Roccus chrysops</i>
Ocean	Blanguillo	<i>Coregonus clupeaformis</i>
White perch	<i>Prosopium quadrilaterale</i>
Whiting	Silver hake	<i>Caulolatilus princeps</i>
Wolfish	Catfish (New England)	<i>Morone americana</i>
Yellow perch	Ringed perch, perch	<i>Merluccius bilinearis</i>
Yellow pike	{ Wall-eyed pike, pike perch, dore (Canadian)	<i>Anarhchias lupus</i>
Yellowtail	(For Atlantic, see snapper, yellowtail)	<i>Perca flavescens</i>
Yellowtail flounder	See flounder, yellowtail	<i>Stizostedion vitreum vitreum</i>
CRUSTACEANS		
Crab:		
Blue:		
Hard	Hard-shell crab	<i>Callinectes sapidus</i>
Soft and peelers	Soft-shell crab	<i>Callinectes sapidus</i>
Dungeness	<i>Cancer magister</i>
King	Alaska king crab	<i>Paralithodes camtschatica</i>
Rock	<i>Cancer irroratus</i> (New England)
Stone	<i>Cancer species</i> (California)
		<i>Menippe mercenaria</i>

Periwinkle or cockle	

(Continued on next page)

Common names as shown in Service reports	Other common names	Scientific names
MOLLUSKS - Continued		
Scallop:	
Bay	{ <i>Pecten irradians</i> (Atlantic)
Sea	{ <i>Pecten aequisulcatus</i> (Pacific)
		{ <i>Pecten magellanicus</i>
Squid	Inkfish, bone squid, tawtau.....	{ <i>Loligo opalescens</i> (Pacific)
		{ <i>Loligo pealei</i> (Atlantic)
OTHER		
Sea urchin	Sea eggs	<i>Strongylocentrotus drobachiensis</i>
Starfish		Asteroidae class
Terrapin	Diamond-back terrapin.....	<i>Malaclemys</i> species
Turtle:		
Green	<i>Chelonia mydas</i>
Loggerhead	<i>Caretta</i> species
Hawksbill	<i>Eretmochelys imbricata</i>
Snapper	Horn-shell, alligator turtle	{ <i>Chelydra serpentina</i>
		{ <i>Macrochelys temminckii</i>
Soft-shell	<i>Trionyx</i> species
Frogs	<i>Rana</i> species
Irish moss	<i>Chondrus crispus</i>
Kelp	{ <i>Macrocystis</i> species, <i>Nereocystis</i>
		species, <i>Pelagophycus</i> species,
		<i>Alaria</i> species
Rockweed	Seaweed	<i>Laminaria</i> species
Sponge:		
Glove	{ <i>Spongia graminea</i>
Grass	
Sheepswool	Wool	<i>Hippiospongia lachne</i>
Yellow	<i>Spongia barbara</i>
Trepang	Sea cucumber	<i>Cucumaria frondosa</i> , <i>Thyone</i>
		<i>brariareus</i>
Bloodworms	Terebellidae family
Sandworms	<i>Nereis</i> species

MENHADEN REDUCTION PLANT

SECTION 16 - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States and Alaska, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which commercial landings are made in the United States and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types which are normally used in their capture. The gear do not necessarily appear in the order of their importance.

For more detailed information on the nomenclature of the fishery products listed below the reader is referred to Section 15 of this publication entitled, "Glossary".

ALEWIFE
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - POUND NETS, GILL NETS, WEIRS,
 DIP NETS, HAUL SEINES, FLOATING TRAPS,
 FYKE NETS

ANGLERFISH
 RANGE - NEW JERSEY TO MASSACHUSETTS
 GEAR - OTTER TRAWLS, POUND NETS

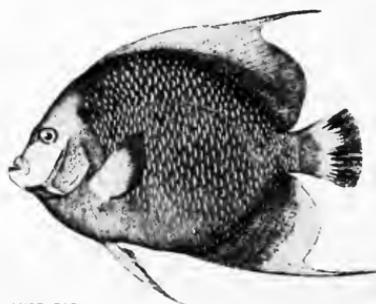

AMBERJACK
 RANGE - FLORIDA
 GEAR - HAND LINES, TROLL LINES

BARRACUDA (ATLANTIC)
 RANGE - FLORIDA
 GEAR - TROLL LINES, HAND LINES

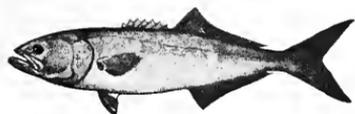

BARRACUDA (PACIFIC)
 RANGE - CALIFORNIA
 GEAR - PURSE SEINES, SET LINES, HAND LINES,
 TROLL LINES, GILL AND TRAMMEL NETS

ANGELFISH
 RANGE - FLORIDA
 GEAR - HAUL SEINES

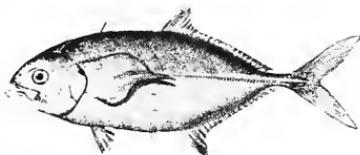

ANCHOVY
 RANGE - CALIFORNIA TO WASHINGTON
 GEAR - PURSE SEINES AND HAUL SEINES

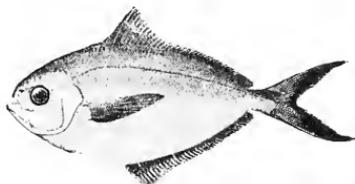

BLUEFISH
 RANGE - GULF OF MEXICO TO NEW ENGLAND
 GEAR - HAUL SEINES, GILL NETS, POUND NETS,
 TROLL LINES, PURSE SEINES

BURBOT
 RANGE - GREAT LAKES
 GEAR - GILL NETS, FYKE NETS, POUND
 NETS, TRAP NETS

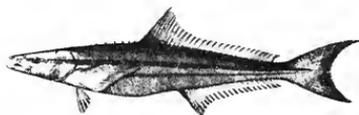

BLUERUNNER OR HARDTAIL
 RANGE - GULF OF MEXICO
 GEAR - HAUL SEINES, GILL NETS, POTS

BUTTERFISH
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

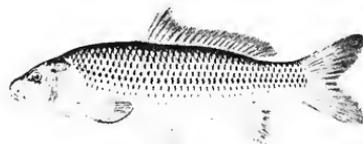

BONITO (ATLANTIC)
 RANGE - NORTH CAROLINA TO MASSACHUSETTS
 GEAR - POUND NETS, TROLL LINES, GILL NETS

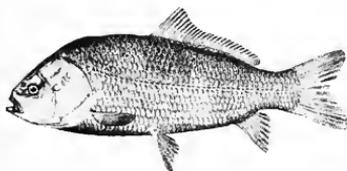

CABIO
 RANGE - FLORIDA TO VIRGINIA
 GEAR - HAND LINES, POUND NETS

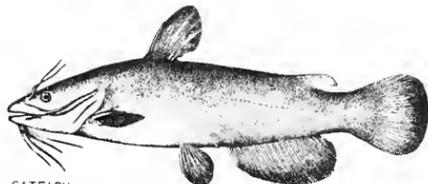

BOWFIN
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

CARP
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, GILL NETS, TRAP NETS,
 FYKE NETS, POUND NETS, TROT LINES

BUFFALOFISH
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, FYKE NETS, TRAMMEL
 NETS, TROT LINES

CATFISH
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TROT LINES, POUND
 NETS, POTS, FYKE NETS

PICTORIAL SECTION

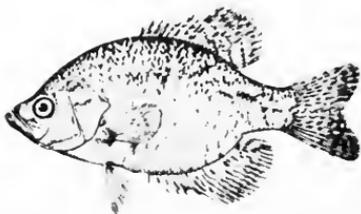

CHUB
 RANGE - GREAT LAKES
 GEAR - GILL NETS

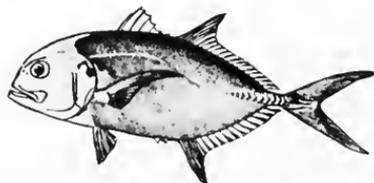

CIGARFISH
 RANGE - FLORIDA
 GEAR - HAUL SEINES

COD
 RANGE - VIRGINIA TO MAINE, WASHINGTON
 AND ALASKA
 GEAR - OTTER TRAWLS, TRAWL LINES, GILL NETS

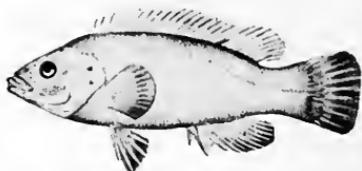

CRAPPIE
 RANGE - FRESH-WATER LAKES
 GEAR - HAUL SEINES, LINES, POTS

CREVALLE
 RANGE - SOUTH ATLANTIC AND GULF STATES
 GEAR - HAUL SEINES, GILL NETS, LINES

CROAKER
 RANGE - GULF OF MEXICO TO NEW YORK
 GEAR - POUND NETS, OTTER TRAWLS, HAUL SEINES,
 GILL NETS

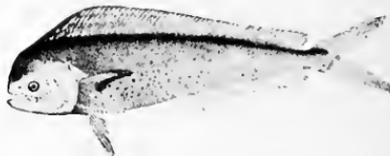

CUNNER
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS, HAND LINES

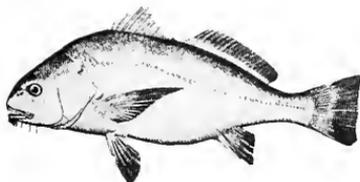

CUSK
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS, TRAWL LINES

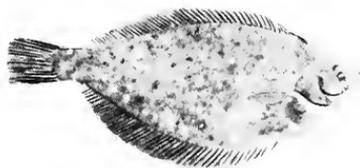

DOLLY VARDEN TROUT
 RANGE - PACIFIC COAST
 GEAR - POUND NETS, GILL NETS, LINES

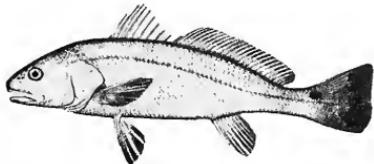

DOLPHIN
 RANGE - FLORIDA TO NORTH CAROLINA
 GEAR - TROLL LINES

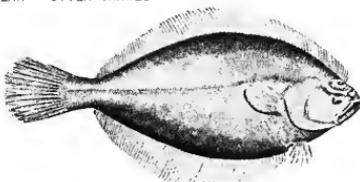

DRUM, BLACK
 RANGE - TEXAS TO NORTH CAROLINA
 GEAR - HAUL SEINES, POUND NETS, LINES

LEMON SOLE
 RANGE - NEW YORK TO MAINE
 GEAR - OTTER TRAWLS

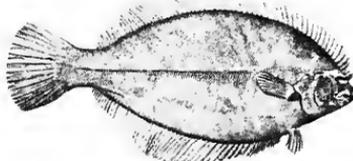

DRUM, RED
 RANGE - TEXAS - MARYLAND
 GEAR - POUND NETS, HAUL SEINES, GILL NETS,
 LINES

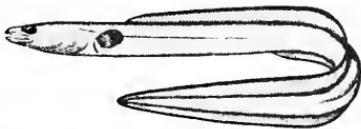

DAB
 RANGE - MASSACHUSETTS TO NOVA SCOTIA
 GEAR - OTTER TRAWLS, TRAWL LINES

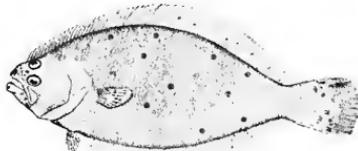

EEL, COMMON
 RANGE - FLORIDA TO NEW ENGLAND AND IN
 MISSISSIPPI RIVER, LAKE ONTARIO
 GEAR - POTS, SPEARS, POUND NETS

BLACKBACK OR WINTER FLOUNDER
 RANGE - NORTH CAROLINA TO MAINE
 GEAR - OTTER TRAWLS, POUND NETS, FYKE NETS,
 SPEARS, LINES

EEL, CONGER
 RANGE, FLORIDA TO NEW ENGLAND
 GEAR - OTTER TRAWLS

FLUKE
 RANGE - TEXAS TO MASSACHUSETTS
 GEAR - OTTER TRAWL, SPEARS, LINES

GRAY SOLE
 RANGE - MASSACHUSETTS TO MAINE
 GEAR - OTTER TRAWLS

FLYING FISH
 RANGE - PACIFIC AND ATLANTIC OCEANS
 GEAR - GILL NETS

PICTORIAL SECTION

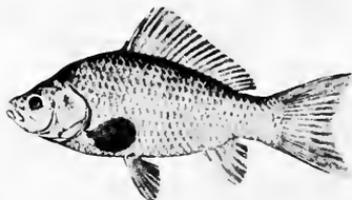

FRIGATE MACKEREL
RANGE - MIDDLE ATLANTIC
GEAR - POUND NETS

GARFISH
RANGE - FRESH-WATER
GEAR - HAUL SEINES, LINES

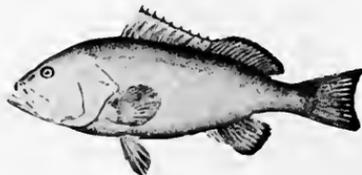

GIZZARD SHAD
RANGE - NORTH CAROLINA TO MARYLAND,
GREAT LAKES
GEAR - HAUL SEINES, POUND NETS, GILL NETS

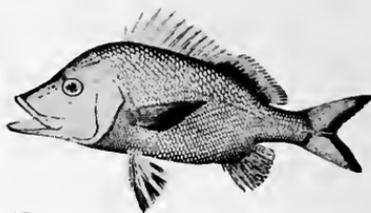

GOLOFISH
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

GRAYFISH
RANGE - PACIFIC COAST STATES
GEAR - TRAWL LINES, OTTER TRAWLS, GILL NETS

GROUPE
RANGE - TEXAS TO SOUTH CAROLINA
GEAR - HAND LINES, POTS

GRUNT
RANGE - FLORIDA
GEAR - POTS, GILL NETS, LINES

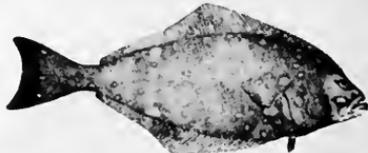

HADDOCK
RANGE - NEW ENGLAND STATES
GEAR - OTTER TRAWLS, GILL NETS, TRAWL LINES

HAKE, RED
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, TRAWL LINES

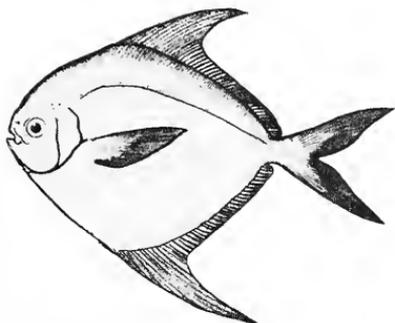

HAKE, WHITE
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, TRAWL LINES

HALIBUT
RANGE - PACIFIC COAST - NEW ENGLAND
GEAR - TRAWL LINES, OTTER TRAWLS

HARDHEAD
RANGE - CALIFORNIA
GEAR - FYKE NETS

HARVESTFISH OR "STARFISH"
 RANGE - NORTH CAROLINA TO CHESAPEAKE BAY
 GEAR - HAUL SEINES, POUND NETS

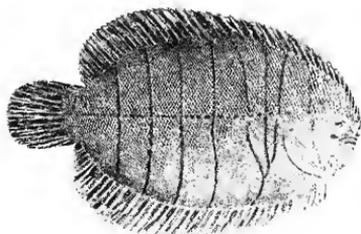

HERRING, LAKE
 RANGE - GREAT LAKES
 GEAR - GILL NETS, HAUL SEINES, POUND NETS,
 TRAP NETS

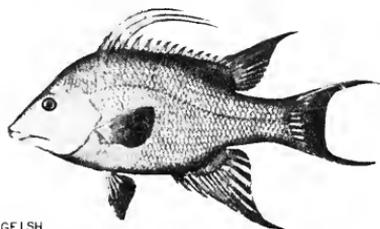

HERRING, SEA
 RANGE - NEW JERSEY TO NEW ENGLAND, PACIFIC
 COAST STATES AND ALASKA
 GEAR - PURSE SEINES, WEIRS, FLOATING TRAPS,
 STOP SEINES

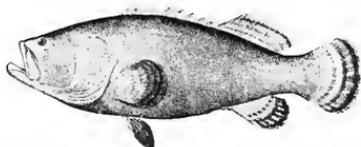

HICKORY SHAD
 RANGE - FLORIDA TO RHODE ISLAND
 GEAR - POUND NETS, HAUL SEINES, GILL NETS
 FLOATING TRAPS

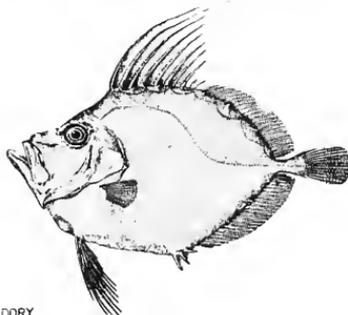

HOGCHOKER
 RANGE - CHESAPEAKE BAY
 GEAR - POUND NETS, HAUL SEINES

HOGFISH
 RANGE - FLORIDA
 GEAR - LINES

JEWFISH
 RANGE - FLORIDA
 GEAR - HAND LINES

JOHN DORY
 RANGE - MIDDLE ATLANTIC STATES
 GEAR - OTTER TRAWLS

PICTORIAL SECTION

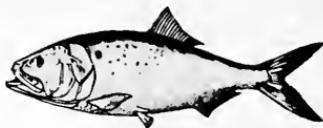

KING MACKEREL
 RANGE - TEXAS TO NEW YORK
 GEAR - TROLL LINES, GILL NETS, HAND LINES

MACKEREL, ATLANTIC
 RANGE - CHESAPEAKE BAY TO MAINE
 GEAR - PURSE SEINES, GILL NETS, POUND NETS,
 FLOATING TRAPS

KING WHITING
 RANGE - TEXAS TO MASSACHUSETTS
 GEAR - OTTER TRAWLS, HAUL SEINES, POUND NETS

MENHADEN
 RANGE - GULF OF MEXICO TO NEW ENGLAND
 GEAR - PURSE SEINES, POUND NETS

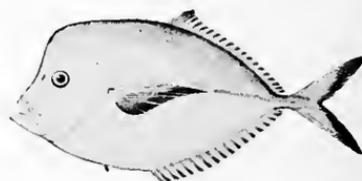

LAKE TROUT
 RANGE - GREAT LAKES
 GEAR - GILL NETS, LINES, POUND NETS (TRAP NETS)

MOONEYE
 RANGE - GREAT LAKES
 GEAR - HAUL SEINES

LAMPREY
 RANGE - FRESH-WATER
 GEAR - POTS, FYKE NETS

MOONFISH
 RANGE - FLORIDA
 GEAR - HAND LINES, HAUL SEINES

LAUNCE
 RANGE - NEW ENGLAND
 GEAR - HAUL SEINES

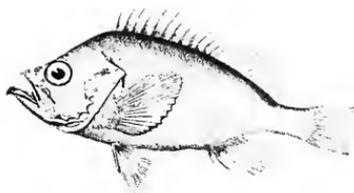

MULLET
 RANGE - TEXAS TO NEW JERSEY
 GEAR - GILL NETS, HAUL SEINES, POUND NETS,
 CAST NETS

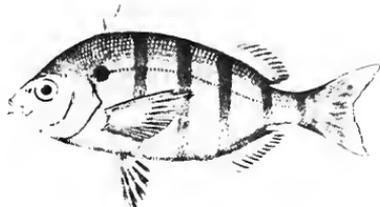

LINGCOD
 RANGE - CALIFORNIA TO ALASKA
 GEAR - OTTER TRAWLS, TRAWL LINES, SET LINES,
 HAND LINES

OCEAN POUT
 RANGE - NEW ENGLAND
 GEAR - OTTER TRAWLS

OCEAN PERCH
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS

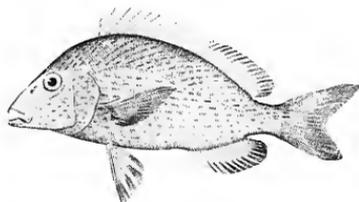

PINFISH
RANGE - FLORIDA TO NORTH CAROLINA
GEAR - HAUL SEINES, GILL NETS

PADDFISH
RANGE - GULF OF MEXICO, MISSISSIPPI RIVER
GEAR - HAUL SEINES, TROT LINES

POLLOCK
RANGE - MIDDLE ATLANTIC AND NEW ENGLAND STATES
GEAR - TRAWL LINES, FLOATING TRAPS, POUND NETS,
OTTER TRAWLS, GILL NETS

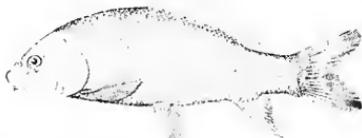

FIGFISH
RANGE - FLORIDA
GEAR - POTS, HAND LINES, GILL NETS

POMPANO
RANGE - TEXAS TO NORTH CAROLINA
GEAR - TRAMMEL NETS, HAUL SEINES, GILL NETS,
HAND LINES

PIKE OR PICKEREL
RANGE - FRESH-WATER
GEAR - TRAP NETS, FYKE NETS, GILL NETS,
POUND NETS, HAND LINES

QUILLBACK
RANGE - FRESH-WATER
GEAR - HAUL SEINES, TROT LINES, FYKE NETS

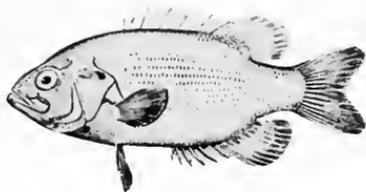

SARDINE (PILCHARD)
RANGE - CALIFORNIA TO WASHINGTON
GEAR - PURSE SEINES, LAMPARA AND RING NETS,

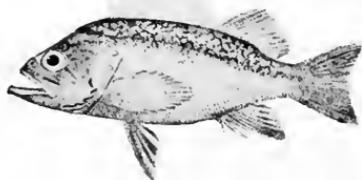

RATFISH
RANGE - WASHINGTON TO ALASKA
GEAR - BEAM TRAWLS, TRAWL LINES

PICTORIAL SECTION

ROCK BASS
RANGE - GREAT LAKES
GEAR - TRAP NETS, FYKE NETS, HAUL SEINES,
GILL NETS

ROCKFISH
RANGE - CALIFORNIA TO ALASKA
GEAR - LINES, OTTER TRAWLS, PARANZELLA NETS,
GILL NETS

RUDDERFISH
RANGE - CALIFORNIA
GEAR - LAMPARA AND RING NETS

SABLEFISH
RANGE - PACIFIC COAST STATES AND ALASKA
GEAR - TRAWL LINES, OTTER TRAWLS

SALMON, CHINOOK OR KING
RANGE - CALIFORNIA TO ALASKA
GEAR - POUND NETS, PURSE SEINES, GILL NETS,
HAUL SEINES, TROLL LINES, REEF NETS

SALMON, CHUM OR KETA
RANGE - OREGON TO ALASKA
GEAR - POUND NETS, PURSE SEINES, GILL NETS,
HAUL SEINES, REEF NETS

SALMON, PINK
RANGE - WASHINGTON TO ALASKA
GEAR - PURSE SEINES, POUND NETS, GILL NETS,
REEF NETS

SALMON, RED OR SOCKEYE
RANGE - OREGON TO ALASKA
GEAR - GILL NETS, PURSE SEINES, POUND NETS,
REEF NETS

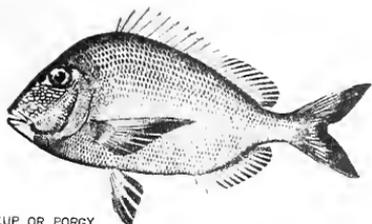

SALMON, SILVER OR COHO
RANGE - CALIFORNIA TO ALASKA
GEAR - HAUL SEINES, PURSE SEINES, GILL NETS,
TROLL LINES, POUND NETS, REEF NETS

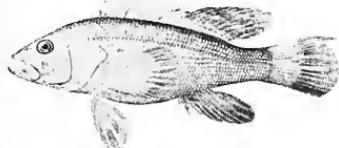

SAUGER
RANGE - GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, TRAP NETS,
FYKE NETS

SCULPIN
RANGE - PACIFIC COAST STATES AND ALASKA
GEAR - LINES, GILL NETS, POTS

SCUP OR PORGY
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - OTTER TRAWLS, POUND NETS

SEA BASS
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - OTTER TRAWLS, HAND LINES, POTS

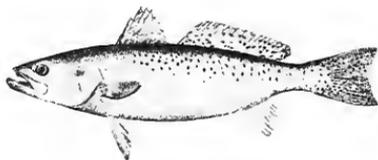

SEA CATFISH
 RANGE - TEXAS TO CHESAPEAKE BAY
 GEAR - OTTER TRAWLS, HAUL SEINES, HAND LINES

SEA ROBIN
 RANGE - CHESAPEAKE BAY TO NEW ENGLAND
 GEAR - POUND NETS, OTTER TRAWLS

SEA TROUT OR WEAKFISH, GRAY
 RANGE - FLORIDA TO MASSACHUSETTS
 GEAR - OTTER TRAWLS, POUND NETS, PURSE SEINES,
 GILL NETS, HAUL SEINES

SEA TROUT OR WEAKFISH, SPOTTED
 RANGE - MARYLAND TO TEXAS
 GEAR - GILL NETS, TRAMMEL NETS, HAUL SEINES,
 POUND NETS, OTTER TRAWLS, HAND LINES

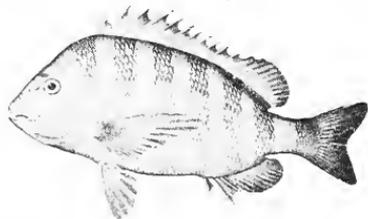

SEA TROUT OR WEAKFISH, WHITE
 RANGE - GULF OF MEXICO
 GEAR - GILL NETS, HAUL SEINES, HAND LINES

SHAD
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - GILL NETS, POUND NETS, FYKE NETS,
 HAUL SEINES

SHARK
 RANGE - ATLANTIC COAST, GULF, PACIFIC COAST STATES
 GEAR - TRAWL LINES, GILL NETS, OTTER TRAWLS

SHEEPSHEAD
 RANGE - TEXAS TO CHESAPEAKE BAY
 GEAR - HAND LINES, POTS

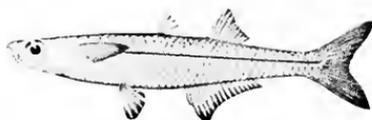

PICTORIAL SECTION

SHEEPSHEAD, CALIFORNIA
 RANGE - CALIFORNIA
 GEAR - SET LINES, TRAMMEL NETS

SILVER PERCH
 RANGE - TEXAS TO NEW YORK
 GEAR - HAUL SEINES, GILL NETS, POUND NETS

SILVERSIDES
 RANGE - NEW YORK
 GEAR - HAUL SEINES, OTTER TRAWLS

SKATE
 RANGE - PACIFIC COAST, CHESAPEAKE BAY TO NEW ENGLAND
 GEAR - LINES, OTTER TRAWLS, POUND NETS, HAUL SEINES

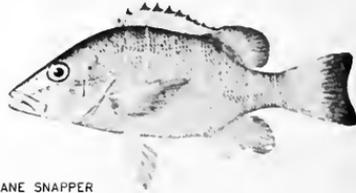

SKIPPER OR BILLFISH
 RANGE - VIRGINIA TO NOVA SCOTIA
 GEAR - POUND NETS, WEIRS

SMELT
 RANGE - NEW YORK TO MAINE, PACIFIC OCEAN,
 GREAT LAKES
 GEAR - POUND NETS, DIP NETS, GILL NETS, HAUL SEINES

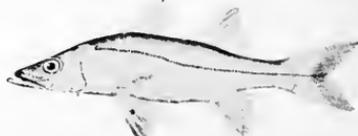

GRAY SNAPPER
 RANGE - FLORIDA
 GEAR - HAND LINES, GILL NETS

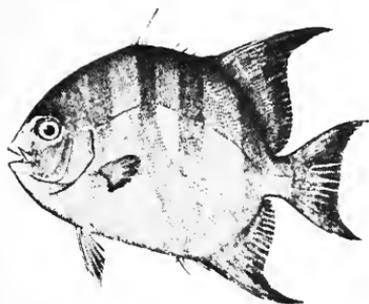

LANE SNAPPER
 RANGE - FLORIDA
 GEAR - HAND LINES

RED SNAPPER
 RANGE - TEXAS TO FLORIDA
 GEAR - HAND LINES

SNOOK
 RANGE - TEXAS TO FLORIDA
 GEAR - GILL NETS, HAND LINES, HAUL SEINES

SPADEFISH
 RANGE - FLORIDA
 GEAR - GILL NETS, TRAMMEL NETS

SPANISH MACKEREL
 RANGE - TEXAS TO VIRGINIA
 GEAR - GILL NETS, LINES, HAUL SEINES

SPOT
 RANGE - GULF OF MEXICO TO MIDDLE ATLANTIC STATES
 GEAR - HAUL SEINES, GILL NETS, POUND NETS,
 OTTER TRAWLS

SQUAWFISH
 RANGE - CALIFORNIA
 GEAR - FYKE NETS, GILL NETS

STEELHEAD TROUT
 RANGE - OREGON TO ALASKA
 GEAR - HAUL SEINES, POUND NETS, GILL NETS,
 LINES, DIP NETS

STRIPED BASS
 RANGE - NORTH CAROLINA TO NEW ENGLAND, CALIFORNIA
 TO OREGON
 GEAR - HAUL SEINES, GILL NETS, POUND NETS,
 HAND LINES, FYKE NETS

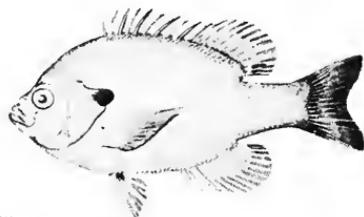

STURGEON
 RANGE - COASTAL AND RIVER AREAS
 GEAR - GILL NETS, LINES

STURGEON, SHOVELNOSE
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, LINES, POUND NETS

SUCKERS
 RANGE - FRESH-WATER
 GEAR - POUND NETS, FYKE NETS, GILL NETS,
 HAUL SEINES, TRAP NETS

SUNFISH
 RANGE - FRESH-WATER
 GEAR - POTS, SEINES, TRAP NETS

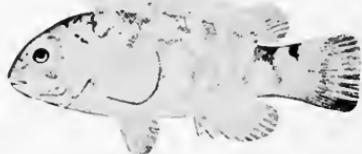

SWELLFISH
 RANGE - CHESAPEAKE BAY TO MIDDLE ATLANTIC
 GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

PICTORIAL SECTION

SWORDFISH
 RANGE - NEW ENGLAND AND CALIFORNIA
 GEAR - HARPOONS

TAUTOG
 RANGE - CHESAPEAKE BAY TO NEW ENGLAND
 GEAR-FOUND NETS, HAND LINES, POTS

TENPOUNDER
 RANGE - FLORIDA
 GEAR - HAUL SEINES

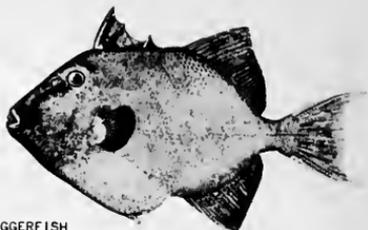

THIMBLE-EYED MACKEREL
 RANGE - CHESAPEAKE BAY TO NEW ENGLAND
 GEAR - POUND NETS, PURSE SEINES, OTTER TRAWLS

TILEFISH
 RANGE - MIDDLE ATLANTIC AND NEW ENGLAND STATES
 GEAR - TRAWL LINES, REEF NETS

TOMCOD
 RANGE - PACIFIC COAST, MIDDLE ATLANTIC AND
 NEW ENGLAND STATES
 GEAR - OTTER TRAWLS, DIP NETS

TRIGGERFISH
 RANGE - FLORIDA
 GEAR - HAND LINES

TRIPLETAIL
 RANGE - FLORIDA
 GEAR - HAUL SEINES, GILL NETS, LINES

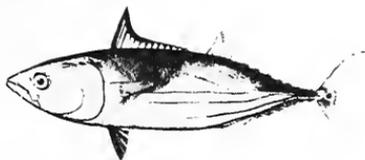

TUNA, ALBACORE
 RANGE - PACIFIC COAST
 GEAR - LINES

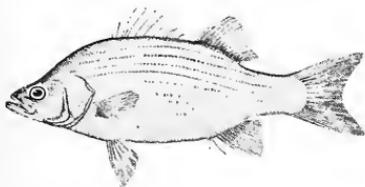

TUNA, BLUEFIN
 RANGE - CALIFORNIA, NEW JERSEY TO MAINE
 GEAR - PURSE SEINES, LAMPARA NETS, TROLL LINES,
 POUND NETS, HARPOONS

TUNA, LITTLE
 RANGE - MASSACHUSETTS TO TEXAS
 GEAR - POUND NETS, TROLL LINES, OTTER TRAWLS

TUNA, SKIPJACK
RANGE - CALIFORNIA
GEAR - LINES, PURSE SEINES

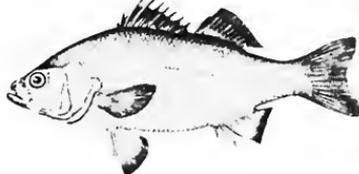

WHITE BASS
RANGE - GREAT LAKES
GEAR - TRAP NETS, FYKE NETS, HAUL SEINES,
POUND NETS

WHITEFISH, COMMON
RANGE - GREAT LAKES
GEAR - GILL NETS, POUND NETS, TRAP NETS

WHITEFISH, MENOMINEE
RANGE - ALASKA, GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, TRAP NETS,
POUND NETS

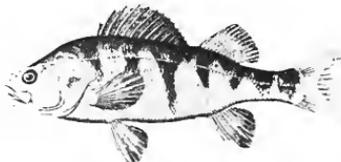

WHITE PERCH
RANGE - NORTH CAROLINA TO MAINE
GEAR - POUND NETS, FYKE NETS, HAUL SEINES

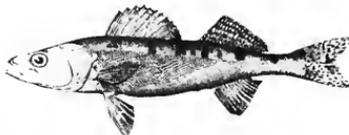

WHITING
RANGE - VIRGINIA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS

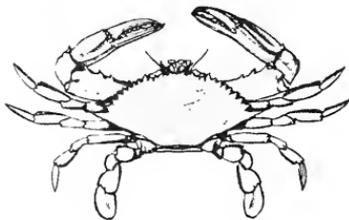

WOLFFISH
RANGE - MASSACHUSETTS AND MAINE
GEAR - OTTER TRAWLS, LINE TRAWLS

YELLOW PERCH
RANGE - GREAT LAKES, OTHER LAKES
GEAR - GILL NETS, TRAP NETS, POUND NETS,
FYKE NETS

YELLOW PIKE
RANGE - GREAT LAKES
GEAR - POUND NETS, FYKE NETS, GILL NETS,
TRAP NETS

BLUE CRAB
RANGE - TEXAS TO RHODE ISLAND
GEAR - TROT LINES, POTS, FYKE NETS, DIP NETS,
SCRAPES, DREDGES

PICTORIAL SECTION

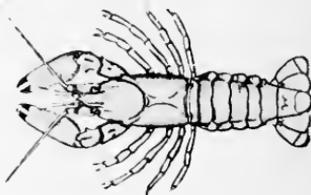

DUNGENESS CRAB
 RANGE - PACIFIC COAST STATES AND ALASKA
 GEAR - TRAPS

HORSESHOE CRAB
 RANGE - MARYLAND TO NEW YORK
 GEAR - POUND NETS, WEIRS, BY HAND

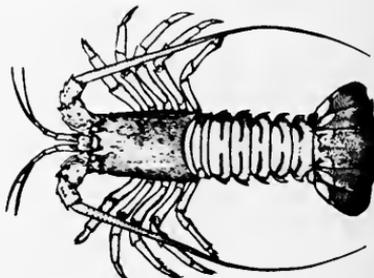

KING CRAB
 RANGE - ALASKA
 GEAR - TANGLE NETS, OTTER TRAWLS

FRESH-WATER CRAWFISH
 RANGE - RIVERS AND LAKES
 GEAR - CRAWFISH (POTS)

ROCK CRAB
 RANGE - NEW ENGLAND
 GEAR - POTS

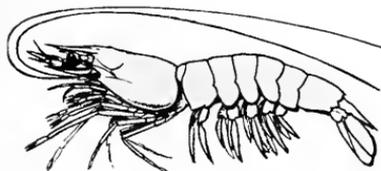

SEA CRAWFISH OR SPINY LOBSTER
 RANGE - CALIFORNIA AND FLORIDA
 GEAR - DIP NETS, POTS, HODKS

STONE CRAB
 RANGE - FLORIDA
 GEAR - DIP NETS, CRAB POTS

LOBSTER
 RANGE - VIRGINIA TO MAINE
 GEAR - POTS

SHRIMP
 RANGE - TEXAS TO NORTH CAROLINA, MAINE,
 CALIFORNIA, WASHINGTON AND ALASKA
 GEAR - SHRIMP TRAWLS

SOFT CLAMS
 RANGE - MIDDLE ATLANTIC TO NEW ENGLAND,
 PACIFIC COAST STATES
 GEAR - FORKS, HOES, RAKES

BUTTER CLAM
 RANGE - PACIFIC COAST
 GEAR - SHOVELS

CONCH
 RANGE - FLORIDA TO MAINE
 GEAR - SPONGE HOOKS, OTTER TRAWLS, DREDGES, POTS

LITTLE NECK CLAMS
 RANGE - PACIFIC COAST
 GEAR - SHOVELS

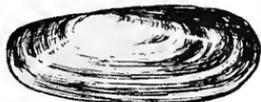

LIMPET
 RANGE - NEW YORK AND NEW ENGLAND
 GEAR - DREDGES

HARD CLAMS
 RANGE - FLORIDA TO MAINE
 GEAR - HOES, DREDGES, TONGS, RAKES, BY HAND

FRESH-WATER MUSSEL
 RANGE - FRESH-WATER STREAMS
 GEAR - CROW/FOOT BARS, PICKS, HAND

RAZOR CLAMS, PACIFIC
 RANGE - OREGON, WASHINGTON AND ALASKA
 GEAR - SHOVELS

OCEAN MUSSEL
 RANGE - NORTH CAROLINA TO MAINE
 GEAR - DREDGES, TONGS, RAKES, HAND

PICTORIAL SECTION

OYSTER
 RANGE - TEXAS TO MASSACHUSETTS, PACIFIC COAST STATES
 GEAR - TONGS, DREDGES, RAKES, HAND

TERRAPIN
 RANGE - TEXAS TO NEW JERSEY
 GEAR - HAUL SEINES, HAND

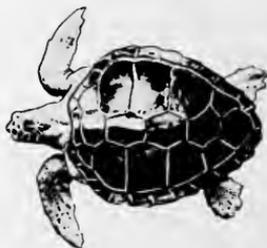

BAY SCALLOP
 RANGE - FLORIDA TO MASSACHUSETTS, WASHINGTON
 GEAR - DREDGES, SCRAPES, PUSH NETS, TONGS, RAKES

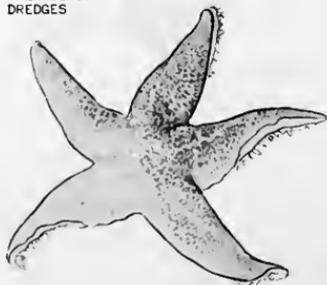

GREEN TURTLE
 RANGE - FLORIDA
 GEAR - GILL NETS, TANGLE NETS

SEA SCALLOP
 RANGE - NEW JERSEY TO MAINE
 GEAR - DREDGES

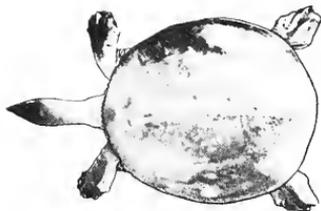

LOGGERHEAD TURTLE
 RANGE - FLORIDA TO NEW JERSEY
 GEAR - GILL NETS

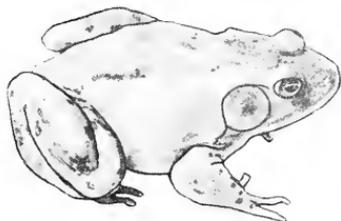

STARFISH
 RANGE - ATLANTIC AND PACIFIC COAST
 GEAR - HOOKS, SCRAPES, "MOPS"

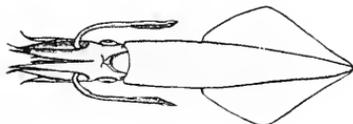

HAWKSBILL TURTLE
 RANGE - GULF OF MEXICO, AND ATLANTIC COAST
 TO NEW YORK
 GEAR - HAND, TANGLE NETS, POUND NETS

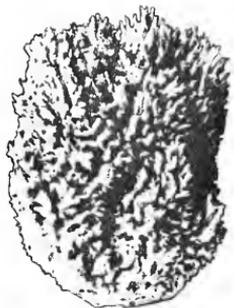

SOFT-SHELL TURTLE
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, FYKE NETS, POTS

FROG
RANGE - FRESH-WATER, MARSHES, POND
GEAR - SPEARS, GRABS

SQUID
RANGE - VIRGINIA TO MAINE, CALIFORNIA AND WASHINGTON
GEAR - LAMPARA NETS, GILL NETS, OTTER TRAWLS,
POUND NETS

SPONGE
RANGE - FLORIDA
GEAR - HOOKS, DIVING OUTFITS

IRISH MOSS
RANGE - NEW ENGLAND
GEAR - RAKES

SECTION 17 - STATISTICAL PUBLICATIONS

The following list of publications includes all reports issued in the Current Fishery Statistics series during 1954.

<u>C. F. S. NO.</u>	<u>TITLE</u>	<u>C. F. S. NO.</u>	<u>TITLE</u>
948	FROZEN FISH REPORT, JANUARY 1954	1016	FLORIDA LANDINGS, ANNUAL, 1953
949	MISSISSIPPI LANDINGS, NOVEMBER 1953	1017	NEW YORK LANDINGS, JANUARY 1954
950	MAINE LANDINGS, NOVEMBER 1953	1018	NEW YORK LANDINGS, FEBRUARY 1954
951	FLORIDA LANDINGS, NOVEMBER 1953	1019	NEW YORK LANDINGS, MARCH 1954
952	NEW JERSEY LANDINGS, NOVEMBER 1953	1020	NEW YORK LANDINGS, APRIL 1954
953	FISH MEAL AND OIL, DECEMBER 1953	1021	SOUTH ATLANTIC FISHERIES, ANNUAL, 1952
954	MASSACHUSETTS LANDINGS, NOVEMBER 1953	1022	ALABAMA LANDINGS, MAY 1954
955	TEXAS LANDINGS, DECEMBER 1953	1023	FROZEN FISH REPORT, JUNE 1954
956	FROZEN FISH REPORT, ANNUAL 1953	1024	NEW YORK LANDINGS, MAY 1954
957	MISSISSIPPI LANDINGS, DECEMBER 1953	1025	TEXAS LANDINGS, JUNE 1954
958	FROZEN FISH REPORT, FEBRUARY 1954	1026	PACIFIC COAST STATES FISHERIES, ANNUAL, 1952
959	MISSISSIPPI LANDINGS, JANUARY 1954	1027	MASSACHUSETTS LANDINGS, JUNE 1954
960	MAINE LANDINGS, DECEMBER 1953	1028	FROZEN FISH REPORT, JULY 1954
961	FLORIDA LANDINGS, DECEMBER 1953	1029	MARYLAND FISHERIES, ANNUAL, 1953
962	NEW JERSEY LANDINGS, DECEMBER 1953	1030	FISH MEAL AND OIL, JUNE 1954
963	FISH MEAL AND OIL, JANUARY 1954	1031	TEXAS LANDINGS, JULY 1954
964	MASSACHUSETTS LANDINGS, DECEMBER 1953	1032	FLORIDA LANDINGS, MAY 1954
965	TEXAS LANDINGS, JANUARY 1954	1033	MISSISSIPPI LANDINGS, JUNE 1954
966	NEW ENGLAND FISHERIES, ANNUAL, 1952	1034	MAINE LANDINGS, JUNE 1954
967	MAINE LANDINGS, BY COUNTIES, 1953	1035	NEW JERSEY LANDINGS, JUNE 1954
968	MASSACHUSETTS LANDINGS, BY PORTS, ANNUAL, 1953	1036	NEW YORK LANDINGS, JUNE 1954
969	MAINE LANDINGS, BY MONTHS, ANNUAL, 1953	1037	ALABAMA LANDINGS, JUNE 1954
970	MASSACHUSETTS LANDINGS, BY GEAR AND AREA, ANNUAL, 1953	1038	MISSISSIPPI LANDINGS, JULY 1954
971	FLORIDA LANDINGS, BY MONTHS, ANNUAL, 1952	1039	FISH MEAL AND OIL, JULY 1954
972	FROZEN FISH REPORT, FEBRUARY 1954	1040	FROZEN FISH REPORT, AUGUST 1954
973	MAINE LANDINGS, JANUARY 1954	1041	FISH MEAL AND OIL, AUGUST 1954
974	MASSACHUSETTS LANDINGS, JANUARY 1954	1042	TEXAS LANDINGS, AUGUST 1954
975	NEW JERSEY LANDINGS, JANUARY 1954	1043	FLORIDA LANDINGS, JUNE 1954
976	MISSISSIPPI LANDINGS, FEBRUARY 1954	1044	MISSISSIPPI LANDINGS, AUGUST 1954
977	MAINE LANDINGS, FEBRUARY 1954	1045	MAINE LANDINGS, JULY 1954
978	FLORIDA LANDINGS, JANUARY 1954	1046	NEW JERSEY LANDINGS, JULY 1954
979	FISH MEAL AND OIL, FEBRUARY 1954	1047	NEW YORK LANDINGS, JULY 1954
980	TEXAS LANDINGS, FEBRUARY 1954	1048	ALABAMA LANDINGS, JULY 1954
981	MASSACHUSETTS LANDINGS, FEBRUARY 1954	1049	MASSACHUSETTS LANDINGS, JULY 1954
982	NEW JERSEY LANDINGS, FEBRUARY 1954	1050	FISHERIES OF THE UNITED STATES AND ALASKA, ANNUAL, 1952
983	LAKE FISHERIES, ANNUAL, 1952	1051	MANUFACTURED FISHERIES PRODUCTS, ANNUAL, 1952
984	FROZEN FISH REPORT, MARCH 1954	1052	FLORIDA LANDINGS, JULY 1954
985	PACKAGED FISH, ANNUAL, 1953	1053	MAINE LANDINGS, AUGUST 1954
986	MAINE LANDINGS, MARCH 1954	1054	NEW JERSEY LANDINGS, AUGUST 1954
987	MASSACHUSETTS LANDINGS, MARCH 1954	1055	ALABAMA LANDINGS, AUGUST 1954
988	NEW JERSEY LANDINGS, MARCH 1954	1056	TEXAS LANDINGS, SEPTEMBER 1954
989	MISSISSIPPI LANDINGS, MARCH 1954	1057	FROZEN FISH REPORT, SEPTEMBER 1954
990	FLORIDA LANDINGS, FEBRUARY 1954	1058	FISH MEAL AND OIL, SEPTEMBER 1954
991	FISH MEAL AND OIL, MARCH 1954	1059	TEXAS LANDINGS, OCTOBER 1954
992	TEXAS LANDINGS, MARCH 1954	1060	FLORIDA LANDINGS, AUGUST 1954
993	ALASKA FISHERIES, ANNUAL, 1953	1061	MISSISSIPPI LANDINGS, SEPTEMBER 1954
994	FROZEN FISH REPORT, APRIL 1954	1062	MAINE LANDINGS, SEPTEMBER 1954
995	MAINE LANDINGS, APRIL 1954	1063	NEW YORK LANDINGS, AUGUST 1954
996	MASSACHUSETTS LANDINGS, APRIL 1954	1064	MASSACHUSETTS LANDINGS, AUGUST 1954
997	NEW JERSEY LANDINGS, APRIL 1954	1065	FROZEN FISH REPORT, OCTOBER 1954
998	MISSISSIPPI LANDINGS, APRIL 1954	1066	MASSACHUSETTS LANDINGS, SEPTEMBER 1954
999	FLORIDA LANDINGS, MARCH 1954	1067	NEW YORK LANDINGS, SEPTEMBER 1954
1000	FISH MEAL AND OIL, APRIL 1954	1068	MISSISSIPPI LANDINGS, OCTOBER 1954
1001	TEXAS LANDINGS, APRIL 1954	1069	FISH MEAL AND OIL, OCTOBER 1954
1002	CHESAPEAKE FISHERIES, ANNUAL, 1952	1070	ALABAMA LANDINGS, SEPTEMBER 1954
1003	IMPORTS AND EXPORTS, ANNUAL, 1949-1953	1071	NEW JERSEY LANDINGS, SEPTEMBER 1954
1004	CANNED FISH AND BYPRODUCTS, ANNUAL, 1953	1072	RHODE ISLAND LANDINGS, JAN., FEB., & MAR., 1954
1005	GULF FISHERIES, ANNUAL, 1952	1073	RHODE ISLAND LANDINGS, APR., MAY, & JUNE, 1954
1006	MIDDLE ATLANTIC FISHERIES, ANNUAL, 1952	1074	RHODE ISLAND LANDINGS, JULY 1954
1007	FROZEN FISH REPORT, MAY 1954	1075	FLORIDA LANDINGS, SEPTEMBER 1954
1008	MAINE LANDINGS, MAY 1954	1076	NEW YORK LANDINGS, OCTOBER 1954
1009	MASSACHUSETTS LANDINGS, MAY 1954	1077	FROZEN FISH REPORT, NOVEMBER 1954
