CIRCULAR 73

United States Department of the Interior, Fred A. Seaton, Secretary Fish and Wildlife Service, Arnie J. Suomela, Commissioner Bureau of Commercial Fisheries, Donald L. McKernan, Director

INSTITUTIONS AND PUBLIC EATING PLACES are among the best of all potential markets for frozen fishery products. In recognition of this, a survey was undertaken to obtain information on the consumption of frozen processed fish and shellfish in these establishments.

This study was conducted in ten selected cities by Crossley, S-D Surveys, Inc., of New York City in order to obtain information which could be used by the fishing industry to increase consumer demand for fishery products. The data obtained for each city as a result of this survey, together with an explanation of the methods and procedures used, are published in a series as follows:

Circular 66 - Survey Methods and Procedures

Circular 67 - Atlanta, Georgia

Circular 68 - Chicago, Illinois

Circular 69 - Cleveland, Ohio

Circular 70 - Denver, Colorado

Circular 71 - Houston, Texas

Circular 72 - Los Angeles, California

Circular 73 - New York, New York

Circular 74 - Omaha, Nebraska

Circular 75 - Portland, Oregon

Circular 76 - Springfield, Massachusetts

This project was financed from funds provided by the Saltonstall-Kennedy Act to increase production and markets for the domestic fishing industry.

These publications are available upon request from the Director, Bureau of Commercial Fisheries, U. S. Department of the Interior, Washington 25, D. C.

# FROZEN PROCESSED FISH AND SHELLFISH CONSUMPTION IN INSTITUTIONS AND PUBLIC EATING PLACES

#### SUMMARY OF FINDINGS

(New York)

#### A. Use of Frozen Processed Sea Food (Tables 1, 2)

Five sixths of all the establishments in New York said they bought sea food in the previous twelve months. However, less than a third of these made purchases of sea food in the frozen processed form.

Only 8 per cent of all the establishments said they had bought <u>frozen processed fish</u> in November, 1958; 18 per cent said they had bought <u>frozen processed shell-fish</u>; while 6 per cent said they had bought portions.

Among institutions (such as schools and hospitals), the incidence of use of frozen processed sea food was much greater than among public eating places.

Of the ten cities in the survey, New York ranked tenth, in terms of the percentage of all establishments buying frozen processed sea food.

### B. Frozen Processed Fish - Purchases, Attitudes, and Practices

#### 1. Purchases: Species and Amount of Prepreparation (Tables 3, 4)

Thirty per cent of the users of frozen processed fish bought flounder fillets during November, 1958. Sizable percentages of establishments bought codfish fillets and sole fillets.

In terms of pounds bought, swordfish steaks and halibut steaks were the leading New York items.

Flounder fillets did not rank high in most other cities, although they enjoyed some popularity in Atlanta and Houston.

## 2. Attitudes Toward Prepreparation and Quality and Condition of Fish (Tables 5, 6)

A great majority of New York purchasers were satisfied with the present prepreparation of fish, and with the quality and condition of the fish.

This was generally true for the ten cities included in the survey.

#### 3. Packaging of Fish (Tables 7, 8)

Data on packaging of fish in New York were limited. Flounder fillets and codfish fillets, the two most popular items, were often bought in 5 pound packages.

## 4. Methods of Preparing and Serving Fish (Table 9)

Frying was the most popular method of preparing fish among New York establishments. The average establishment served 64 per cent of its fish fried. Frying was the leading method in all ten cities of the study.

Broiling was also a rather common method of preparation in New York. The average establishment served 18 per cent of its fish broiled.

#### C. Frozen Processed Shellfish - Purchases, Attitudes, and Practices

## Purchasea: Species and Type of Prepreparation (Tables 10, 11)

Two fifths of the users of shellfish bought breaded shrimp in November, 1958. Frozen raw shrimp was bought by almost as many establishments, and was the leading item in terms of total quantity purchased.

Breaded scallops were also purchased by a number of establishments.

Breaded shrimp and raw shrimp were bought widely and in large quantities in all of the cities included in the study.

# 2. Attitudes Toward Prepreparation; Toward Quality and Condition of Shellfish (Tables 12, 13)

All but a few purchasers were satisfied with the present prepreparation of shellfish, and with the quality and condition of the shellfish which they bought.

The same held generally true for the other cities in the survey.

#### 3. Packaging of Shellfish (Tables 14, 15)

Shellfish items were characteristically bought in 5 pound packages in New York.

## 4. Methods of Preparing and Serving Shellfish (Table 16)

Frying was the most popular way of preparing shellfish in New York. The typical establishment served 52 per cent of its shellfish fried.

As with fish, frying was the leading method of preparing shellfish in all ten cities of the study.

#### D. Portion Controlled Sea Food - Purchases, Attitudes, and Practices

## 1. Purchases: Type of Prepreparation (Tables 1, 17, 18, 19)

Only 6 per cent of all the establishments in New York bought portions during November, 1958.

As with frozen processed sea food in general, New York ranked tenth, in the percentage of establishments buying portions.

In New York, portions were most frequently bought cooked and breaded; and the quantity purchased was greater than that of any other type of prepreparation.

More than half of the purchasers of portions said that they were currently buying about the same amount of portions as the year before. Twenty-four per cent said they were buying more, and 1 per cent said they were buying less.

## 2. Attitudes Toward Portions (Tables 20, 21, 22, 23, 24)

Nearly all establishments said they were satisfied with the quality and condition of portions. Thirteen per cent of the users of portions said they thought the quality of portions was better than that of other frozen processed fish. Almost three fourths of the users rated the quality as about the same, while 3 per cent considered the quality poorer.

Major advantages cited for portions included:

|                                    | % of   |
|------------------------------------|--------|
|                                    | Users  |
|                                    | Citing |
| Size of portions, uniform portions | 56     |
| Convenience, ease of preparation   | 48     |
| Fast, timesaving                   | 24     |
| Economy, no waste                  | 23     |
| Can control food costs better -    |        |
| know profit                        | 21     |

About one fourth of the users cited some disadvantage to using portions. A variety of disadvantages were mentioned.

Users of portions generally thought their customers liked portions the same as other types of frozen processed fish. Fewer than 3 per cent said that their customers liked portions less than other types of frozen processed sea food.

#### 3. Packaging of Portions (Tables 25, 26)

New York purchasers tended to buy portions in larger packages than purchasers in other cities. The average weight of a package of portions for the city was 6.5 pounds.

They also tended to buy individual portions of

larger size, and the average weight of an individual portion was 6.3 ounces.

Almost all establishments, in New York and the other nine cities, said they were satisfied with the size of portions in the packages.

## 4. Methods of Preparing and Serving Portions (Tables 27, 28)

Frying was the most widely used method of preparing and serving portions in New York, with 89 per cent of the establishments serving them this way. The average establishment served 75 per cent of its portions fried.

Frying was the leading method in nine of the ten cities of the study. The exception was Springfield, Massachusetts, where baking was the most popular method.

Almost two thirds of the New York establishments using portions cooked them while frozen.

#### 5. Cost of Using Portions (Table 29)

Fewer than a sixth of the establishments using portions said they were more expensive than other forms of frozen processed fish. A large majority of users considered them less expensive, or rated them about the same.

## 6. Miscellaneous Findings About Portions (Tables 30, 31)

More than three fourths of the New York purchasers said they specified the kind of fish when ordering portions.

Only 5 per cent of the users suggested any new portion items, not now available, which they would like to have.

#### 7. Nonusers of Portions (Table 32)

Establishments which used frozen processed sea food, but not portions, gave a number of reasons for not buying portions: they served other types of fish, they sold comparatively little fish, they used fresh fish.

## E. Suppliers of Frozen Processed Sea Food (Tables 33, 34, 35, 36)

Establishments in New York tended to buy frozen processed sea food from a variety of suppliers. The suppliers were usually less than ten miles from the establishments, and made weekly deliveries. Establishments as a rule were satisfied with the services of the suppliers.

Sea food wholesalers supplied 40 per cent of the establishments, while frozen food distributors accounted for another 28 per cent. Some of the smaller establishments used such suppliers as supermarkets and groceries.

Main suppliers were located less than ten miles from the establishment, in 81 per cent of the cases.

In a little more than half the cases, deliveries were made once a week.

Only a small percentage of the purchasers said they could think of ways in which the suppliers could improve their services.

#### F. Expenditures for Frozen Pr essed Sea Food; Its Profitability (Tables 57, 38)

Two fifths of the establishments reporting in New York said that they spent less than \$250 for frozen processed sea food during the preceding twelve months. The figures ranged upward to \$100,000 and over, with the median coming at \$383.

Somewhat more than half of the profit-making establishments which expressed an opinion, considered frozen processed sea food more profitable than other high protein foods.

#### G. Government Inspection of Frozen Processed Sea Food - Awareness, Effect, and Attitudes (Tables 39, 40, 41, 42)

Two thirds of the establishments in New York were aware that they could buy frozen processed sea food, which had been inspected or graded by the United States Government.

Of those who were unaware, a small number said they would buy more sea food if Government inspected sea food were available. Most said they would buy about the same amount, or that they did not know.

Nine tenths of the establishments, who were aware that they could buy Government inspected or graded sea food, said that they had bought some. When purchasers were asked if the inspection had affected the amount of frozen processed sea food which they bought, 5 per cent said the inspection had caused them to buy more.

## H. Nomusers of Frozen Processed Sea Food; Cold Storage Facilities (Tables 43, 44, 45)

Most nonusers in New York said they had never bought frozen processed sea food. Frequently the establishments said they used little or no fish, or that they used fresh fish.

Findings regarding cold storage facilities among non-users in New York may be summarized as follows:

|   | <u> 1</u> 6 |
|---|-------------|
| Total Nonusers of Frozen Processed Sea Food     | 100         |
| Have cold storage facilities                    | <u>53</u>   |
| Don't use sea food at all                       | 10          |
| Use sea food, but not frozen processed sea food | 43          |
| No cold storage facilities                      | 47          |

(1) The percentages shown in the body of the table are computed on the total number of purchases of each species of fish.

Many users bought more than one species. Some establishments also bought a species prepared in two different ways. For example, haddock fillets and haddock steaks. This was counted as two purchases of the species.

Because purchases of many species were few in number, the species are not included in the table.

|   |   | per pound  | 3.2   |

 The table shows figures for those species and types of prepreparation which occur most often in the city.

Sometimes figures are shown for package sizes but not average number of servings per pound. In these cases the data on servings per pound is limited.

The percentages in the body of the table are based on the number of establishments which bought one species of fish, preprepared in one manner.

(1) The percentages shown in the hody of the table are computed on the total number of purchases of each species of shellfish.

Many establishments bought more than one species. Some establishments also bought a species prepared in two different ways. For example, shrimp breaded and shrimp cooked. This was counted as two purchases of the species.

Because purchases of some species--clams, abalone, and others-were few in number, the species are not included in the table.

Table 13

<sup>(1)</sup> The table shows figures for those species and types of prepreparation which occur most often in the city.

Sometimes figures are shown for package sizes but not average number of servings per pound. In these cases the data on servings per pound is limited.

The percentages in the body of the table are based on the number of establishments which bought one species of shellfish, preprepared in one manner.

# AVERAGE WEIGHT OF PORTIONS AND AVERAGE NUMBER OF SERVINGS PER PACKAGE

| Total users of portions, November, 1958          | 71    |
|--|-------|
| Average weight of package of portions, in pounds | 6.5   |
| Average number of servings per package           | 31.9  |
| Average weight of individual servings, in ounces | 3 • 3 |
| Average weight of individual portions, in ounces | 6.3   |
|  |       |

Note: Average weight of portions does not equal average weight of individual servings since some operators obtained more than one serving from a portion, while other operators used more than one portion for a serving.
