COUNTRY Catfish
COUNTRY CATFISH

Catfish are as American as baseball, the Fourth of July, or the Statue of Liberty. Folklore abounds with tales of these creatures, which have flourished through millions of years. Their size—sometimes more than 100 pounds and up to 6 feet in length—an unusual appearance, and a voracious appetite have made them legendary. American respect for catfish is documented in the naming of streams, parks, streets, and even townships in their honor. Not only do several celebrities in the sports field answer to “Catfish,” but numerous small boys proudly bear this tag. There are many local names for these fish that have graced the tables of nobility, figured in the election of statesmen, and provided sustenance for explorers, pioneers, and American Indians.

From Mississippi river boats, palatial plantations, and Cajun cottages comes an endless variety of wonderful ways with catfish. America’s food heritage speaks richly of this firm-fleshed, delicately flavored fish.

Fresh or frozen, this traditional food is increasingly available in retail stores throughout the country. For special occasions or on your own special day, why not celebrate with catfish on your menu? Catfish are great—either plain or fancy!

More than 20 species of catfish and close relatives are taken from the waters of North America. But for flavor, channel catfish are generally esteemed above all others. With their high value as both sports fish and commercial fish, channel catfish have been studied intensively to learn more about the science of spawning and rearing them in artificially formed lakes. Catfish farms are now operating in the Mississippi Delta areas of Arkansas, Mississippi, Louisiana, and in many other Central and Southern States, resulting in a new multimillion-dollar-a-year industry.

Catfish farming in the United States is the latest development in warm-water fish farming, which first reached significant commercial importance in the late 1940's with the production of bait minnows. In the 1950's, land made idle by rice-crop rotation on Arkansas farms was flooded to form lakes for the raising of various commercial species.

To assure top-quality product, fish culturists follow specific propagation and rearing techniques and use efficient harvesting methods. A proper environment is maintained in specially designed rearing ponds, and growing conditions are controlled. Brood stock is carefully selected, and feed rations scientifically balanced. As in any type of modern farming, scientific management techniques are used throughout.

Fish hatched in the spring of one year are ready for market as 3/4 to 1 1/4-pound fish in the fall of the following year. As with controlled, gain-fed livestock or poultry, farm-raised fish are better flavored and more succulent than those which grow in the wild. From either source, however, channel catfish provide unsurpassed dining pleasure at home, in a restaurant, or at a fish fry.
