SPECIAL SCIENTIFIC REPORT-FISHERIES No. 196

UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE

EXPLANATORY NOTE

The series embodies results of investigations, usually of restricted scope, intended to aid or direct management or utilization practices and as guides for administrative or legislative action. It is issued in limited quantities for official use of Federal, State or cooperating agencies and in processed form for economy and to avoid delay in publication.

Stewart Springer and Harvey R. Bullis, Jr.
Fishery Methods and Equipment Specialists

SPECIAL SCIENTIFIC REPORT: FISHERIES No. 196

Washington, D. C.

December 1956

TABLE OF CONTENTS

	Page
1. Foreword	1
2. List of Mysidacean, Amphipod, Euphausiacean, Decapod, and Stomatopod crustaceans	5
3. Partial list of Gasteropod, Lamellibranch, and Cephalopod mollusks	24
4. List of Fishes	39
5. List of stations, <u>Oregon</u> , Gulf of Mexico, 1950 through 1955. Station numbers 1 through 1429.....	104
6. References	125
7. Index to scientific and common names of families	130

FOREWORD

Beginning in the summer of 1950 the U. S. Fish and Wildlife Service carried out a variety of fishing operations with the exploratory fishing vessel Oregon in the Gulf of Mexico. Conventional fishing gear and special modifications of the usual types of gear were used to determine what fishery resources are available to the Gulf fishing industry and to bring attention to the possibilities for production of unused or neglected resources, either in fishing grounds or in unexploited kinds of fishery products. The program of exploration was prepared by the staff of the Exploratory Fishing and Gear Development Section along lines suggested by the Gulf States Marine Fisheries Commission. The primary objectives were exploration and gear studies designed to give immediate assistance to the Gulf fishing industry. Reports on the results of this work have been published from time to time in *Commercial Fisheries Review*.

The program of exploratory fishing and gear research is only a part of a larger effort to assemble sufficient information to permit proper management of a resource of unknown magnitude and of considerable importance to the entire United States. This larger program involves not only several groups within the Fish and Wildlife Service but also agencies of the States surrounding the Gulf of Mexico, public and private research institutions, and the fishery industries' research facilities.

One of the long-range objectives is to make an inventory of Gulf resources. In an area as large and diverse as the Gulf of Mexico, useful quantitative estimates of the abundance of species are out of reach at present. (For a discussion of this see Gordon Gunter, "Relative Number of Shallow Water Fishes of the Northern Gulf of Mexico, With Some Records of Rare Fishes from the Texas Coast", American Midland Naturalist, July 1941, vol. 26, no. 1, pp. 194-200. For a qualitative inventory a good start has been made for some of the animal groups in shallow waters. Several recent publications by Isaac Ginsburg of the U. S. Fish and Wildlife Service on fishes of the Gulf and the series of publications of the University of Texas Institute of Marine Science are among the important contributions.

Fishery Bulletin 89, "Gulf of Mexico, Its Origin and Marine Life" published in 1954 (Fishery Bulletin of the Fish and Wildlife Service, 55: 1-604, 72 figs.) summarized in convenient form much of the present knowledge about the Gulf of Mexico. Contributions of its 55 authors serve as an orientation to the problems of the area in the study of the geology, marine meteorology, oceanography, and of plant and animal groups, each section including a selected bibliography as

literature cited. The first section by Dr. Paul S. Galtsoff gives an historical account of explorations in the Gulf of Mexico and is an appropriate introduction to the specialized exploratory fishing now being undertaken.

Our present report summarizes a part of the data obtained during cruises of the Oregon from 1950 through the end of 1955. Each scheduled fishing operation was made the subject of a record under a station number. Entries noting time, position, water depth, weather conditions, type of fishing gear used, and total weight of the catch were made for all stations. In addition to these entries, a list of species, the number of each species present in the catch, and other details were recorded for most stations. In many instances the specimens obtained, or selected specimens, were preserved and forwarded to cooperating specialists for determination. Since time was ordinarily unavailable for complete analysis of all catches, the specimens selected for preservation were labeled solely with the station number and were forwarded to cooperators with a station list giving locality data. If the cooperators reported their determinations by station number these were entered as a part of the data for the station.

The records of results of each fishing operation are available for inspection at Pascagoula by research workers. A reference collection consisting primarily of specimens of deep-water species that have been identified by specialists was assembled and maintained in the Pascagoula office to aid staff members in making more troublesome determinations.

It should be recognized that the species represented in this list were obtained with certain types of specialized fishing gear, so their incidences in the Oregon catches are not necessarily indications of their relative abundance in the total gulf fauna. The principle types of fishing gear used have been shrimp trawls, tuna longline gear, handlines, trap lift nets, and dip nets.

It could probably be safely assumed that shrimp trawls are effective collectors of the smaller relatively inactive bottom-dwelling species of fish that characteristically are found over clear bottom. They have proved to be almost completely ineffective in sampling schools of midwater species that have been observed on depth recorders. Shrimp-trawl catches have been remarkably devoid of large fishes that are known to be present in the fishing areas. Also, although some nets have been designed to work closely on the bottom, the general tendency in the recent development of the shrimp trawl has been to so rig the ground line of the trawl that most bottom material is missed. This appears to affect seriously both the type and quality of catches of mollusks, worms, and less active or burrowing crustaceans.

Tuna long-line gear appears to be an efficient method of capturing the larger offshore species of fish but gives a very poor picture of the smaller surface--or subsurface--dwelling species. However, interesting collections have been made from the stomach contents of long-line caught fishes and several previously unrecorded species were taken by that method.

Trap lift nets are perhaps the most selective of gear, their principle of operation being to catch schooled fish, and generally only those attracted by lights.

The most diversified catches from the Oregon have been made with dip nets under lights put over the side of the vessel at night while drifting in offshore waters. However, these catches are mostly made up of postlarval and juvenile forms.

It should also be pointed out that the vast majority of the exploratory-fishing stations have been made in restricted depth ranges. Shrimp-trawl coverage has been extensive in the ranges of 20 to 75 fathoms and 175 to 300 fathoms. Trawl coverage in other depth zones has been poor. Consequently, it is likely that as other depth ranges are more adequately explored, employing the present types of gear as well as such relatively untried methods (in the gulf area) as fish trawls, midwater trawls, and sink gill-nets, this list of species will be greatly augmented.

New species which have been described originally from material collected by the Oregon are indicated by "(type loc.)" inserted after number of the station where the holotype was collected. Original descriptions may be found under "References."

A question mark following the name of a species indicates that the nomenclature is regarded as unsatisfactory by the authority making the identification, and a question mark following a station number indicates a provisional identification for the species taken at that station. In a few instances specific and even generic names have been omitted because for various reasons complete identifications have been impractical or invalidated by subsequent studies, but the identifications are thought to be satisfactory through the higher categories. The abbreviation "(yng.)" has been used to indicate postlarval, juvenile, and young specimens.

LIST OF MYSIDACEAN, AMPHIPOD, EUPHAUSIACEAN,
DECAPOD, AND STOMATOPOD CRUSTACEANS

This list has been prepared from collections of specimens taken in fishing operations of the Oregon and forwarded to the U. S. National Museum where identifications were made by Fennel A. Chace, Jr., Curator, Division of Marine Invertebrates (mysids, euphausiids, decapods, and stomatopods), and C. R. Shoemaker and Thomas E. Bowman (amphipods). Dr. Chace's determinations do not include specimens probably representing 2 new genera and 16 new species of decapods and 3 new species of stomatopods. This new material is being studied and publication of descriptions will be made elsewhere. We are greatly indebted to Dr. Chace and to other authorities at the National Museum for reports of determinations accompanied by natural-history notes which have encouraged the staff at Pascagoula to take special care to select and save material of interest to carcinologists.

In addition to the species identified by Dr. Chace, Dr. Shoemaker, and Dr. Bowman, a large number of determinations have been made by members of the Pascagoula staff; entries for these were made on the original station sheets and are not included in this report. We are indebted to Mr. M. D. Burkenroad for identification of some of the first shrimp specimens which provided us with comparative series used in the field to check identifications. We are also indebted to Mr. W. W. Anderson of the U. S. Fish and Wildlife Service for identification of commercial species of shrimp in the troublesome smaller-size groups.

PARTIAL LIST OF GASTEROPOD, LACELLIBRANCH
AND CEPHALOPOD MOLLUSKS

Collections made on Oregon cruises have included relatively small numbers of offshore bottom-dwelling mollusks. Few exploratory-fishing operations were carried out with gear specially designed to pick up shells, and the trawls used extensively for exploration for shrimp were designed to avoid the collection of bottom trash including shells.

Special attention has been given to the collection of series of living mollusks for preservation with the soft parts intact.

Identifications of this material have been made by Harvey R. Bullis, Jr. (Gasteropoda and Pelecypoda) and Dr. Gilbert L. Voss, University of Miami (Cephalopoda).

PARTIAL LIST OF GASTEROPOD, LAMELLIBRANCH
AND CEPHALOPOD MOLLUSKS

LIST OF FISHES

The 630 species of fish identified from Oregon collections made in the Gulf of Mexico represent a good sample of the kinds of fish readily caught by shrimp trawls in depths from 10 to 250 fathoms. Shrimp trawls were used also for a few drags out to depths of 1200 fathoms and for a few inside the 10 fathom curve. Exploratory drags were made with 40-foot nets in areas where no commercial fishing had been carried on. Where catches with the 40-foot nets were promising, larger nets were used to obtain a better assessment of the production potential. A small amount of the total fishing effort was made with a variety of other gear such as handlines, traps, lift nets, lampara nets, purse seines, and bottom set lines. Beginning in May 1954, longlines were used in offshore waters usually supplemented by night fishing at the surface with lights to attract fishes within reach of dip nets or cast nets.

We are indebted to Henry B. Bigelow and William C. Schroeder for identification of most of the sharks and rays. Hagfish and chimaera specimens and the smaller sharks and rays were forwarded to the Museum of Comparative Zoology at Harvard College for examination. Ten new species have been described from this material and holotypes have been deposited in the U. S. National Museum. Identifications of the larger sharks and rays were made aboard the Oregon by members of the staff of the Pascagoula station.

Identification of large numbers of fishes from the Oregon collections were made by Loren P. Woods and Marion Grey of the Chicago Natural History Museum, by Royal D. Suttkus of Tulane University, and by Giles Mead of the U. S. Fish and Wildlife Service. Special lots or series in special groups were identified by G. S. Myers of Stanford University, Luis Rivas and Victor Springer of the University of Miami, Henry Hildebrand of the University of Texas, David Caldwell and Leonard Giovannoli of the University of Florida, L. P. Schultz, E. A. Lachner, and Robert Kanazawa of the U. S. National Museum, Hurst N. Shoemaker of the Gulf Coast Research Laboratory, and others.

Routine identification and records of the catches at sea were made by the staff of the Pascagoula exploratory fishing station. As a general rule, at least one determination of each species has been made by a qualified specialist. The authors have attempted to eliminate doubtful records while including as many locality records as possible. At the same time the authors have tried to avoid questions of nomenclature by including identifications under the names supplied by the specialist identifying the material. Errors and inconsistencies are perhaps inevitable and are the responsibility of the authors. Family names are given merely for convenience in the presentation of the distribution data and do not indicate an opinion on the part of the authors as to the proper arrangement.

1956. Two occurrences of false killer whales, and a summary of American records. *Amer. Mus. Nov.*, no. 1756, pp. 1-5.

CALDWELL, DAVID K.

1955. Offshore records of the tripletail, Lobotes surinamensis, in the Gulf of Mexico. *Copeia*, no. 2, pp. 152-153

Distribution of the longspined porcupine, Stenotomus caprinus. *Bull. Mr. Sci. Gulf & Carib.*, vol. 5, no. 3, pp. 230-239.

Notes on the spotted dolphin, Stenella plagiodon, and the first record of the common dolphin, Delphinus delphis, in the Gulf of Mexico. *Journ. Mamm.*, vol. 36, no. 3, pp. 467-470.

Notes on the distribution, spawning, and growth of the spot-tailed pinfish, Diplodus holbrooki. *Quarterly Journ. Fla. Acad. Sci.*, vol. 18, no. 2., pp. 73-83.

CAPTIVA, FRANCIS J.

1955. Preliminary report on exploratory long-line fishing for tuna in the Gulf of Mexico and the Caribbean Sea. pt. 2 - Long-line gear used in yellowfin tuna exploration. Comm. Fish. Rev., vol. 17, no. 10, pp. 16-20.

GINSBURG, ISAAC

1951. The eels of the northern Gulf coast of the United States and some related species. Texas Journ. Sci., vol. 3, no. 3., pp. 431-485.
1954. Four new fishes and one little known species from the east coast of the United States including the Gulf of Mexico. Jour. Wash. Acad. Sci., vol. 44, no. 8, pp. 256-264
1954. Whitings on the coasts of the American continents. Dept. Int., Fish. Bull. 96, pp. 187-208 (in Fish. Bull. of the FWS).
1955. Fishes of the family Percophididae from the coasts of eastern United States and the West Indies, with descriptions of four new species. Proc. U.S. Nat. Mus., vol. 104, no. 3347, pp. 623-639.

GRESHAM, CLAUDE.

1955. New fishery in the gulf. Louisiana Conserv., vol. 7, no. 4, pp. 15-19.

GREY, MARION.

1953. Fishes of the family Gempylidae, with records of Nesiarchus and Epimula from the western Atlantic and descriptions of two new sub-species of Epimula orientalis. Copeia, no. 3, pp. 135-141.
1955. Melamphaes triceratops, a syhomonym of the deep-sea fish M. anthrax. Copeia, no. 2, pp. 147-148.
1956. The distribution of fishes found below a depth of 2000 meters. Fieldiana: Zool., vol. 36, no. 2, pp. 77-337.

HAAS, FRITZ.

1956. A deep-sea bug. Chi. Nat. Hist. Mus. Bull., vol. 27, no. 5, p.7.

HARTMAN, OLGA.

1951. The littoral marine annelids of the Gulf of Mexico. Publ. Inst. Mar. Sci., vol. 2, no. 1, pp. 7-124.

HUMM, HAROLD J.

1952. Marine algae from Campeche Banks. Fla. St. Univ. Stud., no. 7, p. 27.

LACHNER, ERNEST A.

1955. Populations of the berycoid fish family Polymixiidae. Proc. U.S. Nat. Mus., vol. 105, no. 3356, pp. 189-206.

MEAD, GILES W.

1951. First record of the Gempylid Fish Epinnula orientalis from American waters. Copeia, no. 4, p. 301.
1955. Occurrence of the lancet fish, Alepisaurus ferox, in the Gulf of Mexico. Copeia, no. 2, pp. 148-149.

MEAD, GILES W. AND JOHN NICHOLSON

1956. Coloconger raniceps in the Gulf of Mexico. Copeia 1956, no. 1, pp. 62-63, pl. 1.

PARR, A. E.

1952. Revision of the genus Talismania, with description of a new species (oregoni) from the Gulf of Mexico. Journ. Wash. Acad. Sci., vol. 42, no. 8, pp. 268-271.

SIEBENALER, J. B.

1953. Trap lift net for catching tuna bait species. Comm. Fish. Rev., vol. 15, no. 8, pp. 14-17.

Fishes taken by the M/V Oregon in shrimp trawls off the coast of Mississippi, 1950-1952. Mimeo rept., issued by FWS office, Pascagoula.

1954. Notes on autumnal trans-gulf migration of birds. Condor, vol. 56, no. 1, pp. 43-48

SPRINGER, STEWART.

1950. Operation of exploratory fishing vessel Oregon. Proceedings of Gulf and Carib. Fish. Instit. 3d Annual Session, Nov. 1950.

1951. Expansion of Gulf of Mexico shrimp fishery, 1945-50. Sep. no. 289, U.S. Dept. Int. Vol. 13, no. 9, Sept. 1951

1954. Exploitation of deep-water shrimp of the Gulf of Mexico. Proc. Gulf & Carib. Fish. Inst., 7th ann. Session, pp. 1-4.

1953. Problems of Exploitation of tuna in the Gulf and Caribbean. Proc. Gulf Carib. Fish. Inst., 5th ann. Session.

SPRINGER, STEWART AND HARVEY R. BULLIS, JR.

1952. Exploratory shrimp fishing in the Gulf of Mexico, 1950-51. U.S. Dept. Int., FL 406, pp. 1-34.

1954. Exploratory shrimp fishing in the Gulf of Mexico - Summary Report for 1952-54. Comm. Fish. Rev., vol. 16, no. 10, pp. 1-16.

VOSS, GILBERT L.

1951. A first record of the Cephalopod, Scaeurgus Unicirrhus, from the western Atlantic. Bull. Mar. Sci. of Gulf and Caribbean 1, no. 1, pp. 64-71.

Further description of Octopus burryi Voss with a note on its distribution. Bull. Mar. Sci. Gulf & Carib., vol. 1, no. 3, pp. 231-240.

1956. A review of the cephalopods of the Gulf of Mexico. Bull. Mar. Sci. Gulf & Carib. vol. 6, no. 2., pp. 85-178.

WOODS, LOREN P.

1951. Scouring the Gulf of Mexico for fishes of the deep sea. Chi. Nat. Hist. Mus. Bull., vol. 22, no. 8, p.3.

1952. Fishes attracted to surface light at night in the Gulf of Mexico. Copeia 1952, no. 1, pp. 40-41.

A second specimen of the Angelfish, Genus Centropyge from the Atlantic. Copeia 1952, no. 4, pp. 269-270.

1955. Western Atlantic species of the genus Holocentrus. Fieldiana, vol. 37, pp. 91-119.

INDEX TO SCIENTIFIC AND COMMON NAMES OF FAMILIES OF

CRUSTACEANS, MOLLUSKS AND FISHES

	Page		Page
ACANTHOCYBIIDAE.....	69	BOTHIDAE.....	62
ACANTHURIDAE.....	89	Box Crabs.....	18
ACHIRIDAE.....	64	BRAMIDAE.....	73
ACIPENSERIDAE.....	46	BRANCHIOSTEGIDAE.....	88
ALBULIDAE.....	46	Breams.....	73
ALEPISauridae.....	57	BREGMACEROTIDAE.....	60
ALEPOCEPHALIDAE.....	48	BROTULIDAE.....	97
ALLOPOSIDAE.....	38	BUCCINIDAE.....	29
ALOPIIIDAE.....	40	Butterfishes.....	73
ALPHEIDAE.....	12	Butterfly Fishes.....	89
