The printing of this publication has been approved by the Director of the Bureau of the Budget,
May 21, 1957. 5/31/60

CONTENTS

COVER: Splitting a 6,000-pound catch of Pacific ocean perch aboard a West Coast trawler, which is using the drum-trawling method--the net is towed from davits located one on each quarter of the stern. The principal unit of the drum-trawling system is the drum upon which the trawl is wound. Drum trawling, a relatively recent development, was introduced into the Pacific Northwest otter-trawl fishery in 1954. (See p. 34 of this issue.)
