## CONTENTS

COVER: Underwater photograph of a school of skipjack in the Central Pacific taken from an observation chamber on board the U. S. Bureau of Commercial Fisheries research vessel Charles H. Gilbert. The observation chamber is a special blister built into the hull aft, below the water line and the fishing racks. The Bureau's Honolulu Biological Laboratory biologists are studying the behavior of skipjack tuna in the Central Pacific. This photograph was taken on July 13, 1959, 10-12 miles south of Barber's Point, Oahu, Hawaii. The fish had a mean length of 22 inches and ranged from 19 to 27 inches, or from 5 to 15 pounds.
