## CONTENTS

COVER: In 1959 about 24.2 million pounds of sea scallop meats were landed in United States North Atlantic ports, principally at New Bedford, Mass. This was considerably more than the 19.0 million pounds landed in 1958. The scalloper with its scallop dredge is the typical vessel and gear used to fish sea scallops. Georges Bank supports the world's largest scallop fishery. United States vessels started extensive commercial fishing on that Bank in the early 1930's and since then there has been a continuous history of good production.
