Use of funds for printing this publication has been approved by the Director of the Bureau of the Budget, May 10, 1960.

5/31/63

## CONTENTS

COVER: Airplanes are being used by the United States commercial fisheries in various areas to locate concentrations of schooling fish. Aerial photo showing herring massed against the webbing of a stop seine the morning after the net had been set. Aircraft are sometimes used to examine the stop-seined area for the results of the previous night's fishing, to determine if the quantity of fish caught is worth moving into a seine pocket for holding. Location: entrance to New Harbor, Maine. (See p. 1 of this issue.)
