CONSERVATION HAS GONE TO SEA

The "era of the sea" is a term which someday may be applied to the latter decades of the 20th century--the time when man began to explore the possibilities of raising his seafood instead of hunting for it.

Heavier fishing by more nations and the realization that sea life, like land life, can be destroyed by over-harvest, has prompted man to apply conservation practices to the sea.

The United States is a member of nine international commissions which regulate to some extent sea harvest; many biologists and oceanographers are getting information which will aid in conservation of present resources and still others are working toward the time when "farming the sea" will be an actual fact.

Helping adjust fisheries and wildlife resources to food and recreational needs of the Nation is the task of the Fish and Wildlife Service

FISH AND WILDLIFE SERVICE
U. S. DEPARTMENT OF THE INTERIOR

Mistakes man made on land need not be repeated at sea.
